Press Release Announcement – May 4, 2007 - For Immediate Release

USDA TO LOOK AT LAND USES ACROSS THE STATE

[PHOENIX, ARIZONA] – During the upcoming June Area Survey, the U.S. Department of Agriculture’s National Agricultural Statistics Service (NASS) will be talking with agricultural producers about their 2007 crop plantings and livestock inventories throughout the state. As part of the nationwide survey, NASS representatives will be knocking on the doors of producers on selected land to collect information about their land uses and agricultural activities.

“The June Area Survey is one of the largest and most comprehensive surveys conducted each year by NASS,” explained Steven Manheimer, Director of the NASS Arizona Field Office. “By providing an in-depth look at land uses and agricultural activities, the survey provides the most timely, accurate and useful information on the current condition of U.S. agriculture.

“Understanding that the information we gather is only as good as the source it comes from, we are counting on the most reliable, frontline source of information for this survey – the producers themselves,” added Manheimer.

During the first two weeks of June, NASS representatives will visit predetermined areas of land in Arizona and conduct personal interviews with the owners and operators of any farm or ranch on that land. NASS will collect information on farm numbers, crop acreage, genetically modified crop acreage, grain stocks, livestock inventory, cash rents and land values, and the value of sales.

The information from the June Area Survey will be used extensively by NASS in its ongoing survey and estimation programs. The survey provides direct data, or is a critical component, for a host of NASS reports, including: the monthly *Crop Production* report, annual *Acreage* report and inventory reports for Cattle, Hogs and Pigs, and Sheep and Goats.

Con’t

This year's reports are even more important with regard to corn acreage. The NASS Planting Intentions report issued last March showed a potential for the largest corn crop since the 1940's. Information collected from the June Area Survey will help produce results that show what actually was planted by U.S. producers. As with all NASS surveys, information provided by respondents is confidential by law. "NASS safeguards the confidentiality of all responses and publishes only state- and national-level data, ensuring that no individual operation or producer can be identified," stated Manheimer. All reports are available on the NASS web site: www.nass.usda.gov. For more information on NASS surveys and reports, call the NASS Arizona Field Office at 1-800-645-7286.
