

Agricultural Overview

California agriculture saw a 4 percent drop in the sales value of its products in 2006. The state's 76,000 farms and ranches received \$31.4 billion for their output, down from the all-time high of \$32.8 billion reached during 2005. The state's agricultural sales first exceeded the \$30.0 billion mark in 2004, when \$30.9 billion in receipts was tallied.

Low milk prices experienced by California's dairy sector contributed to the drop in agricultural sales. Cash receipts for milk totaled \$4.49 billion, down 14 percent from \$5.22 billion in 2005. The price producers received fell from \$13.92 to \$11.58 per hundred pounds of milk sold during the year. Despite the decline in revenue, milk remained California's number one farm commodity, and the Golden State retained its ranking as the nation's leading dairy producer by a wide margin. California produced 21 percent of the U.S. milk supply in 2006, 23 percent of the cheese, 31 percent of the butter, 50 percent of nonfat dry milk, and 15 percent of the ice cream. The state's dairy farms have increased their milk output every year since 1978; the 3.4 percent increase in overall output in 2006 continued this trend.

Growers of grapes and almonds also saw revenue declines during 2006 of 9 percent and 19 percent, respectively. Wine grape prices held firm, but there were fewer grapes to sell in 2006 compared with the huge 2005 crop. The size of the 2006 almond crop increased 22 percent to record 1.15 billion pounds, causing prices during the first part of the marketing season to fall to \$1.87 per pound, from the final price of \$2.81 received for the 2005 crop.

California remained the number one state in cash farm receipts in 2006, with its \$31.4 billion in revenue representing 13.1 percent of the U.S. total. The state's farm revenues were more than the combined totals of Number 2 Texas and Number 3 Iowa.

California's agricultural abundance includes 400 different commodities. Among these, the state produces about half of U.S.-grown fruits, nuts, and vegetables. Many crops are solely produced in California.

Top 5 Agricultural States in Cash Receipts, 2006

State	Rank	Total Value
		Billion Dollars
California	1	31.4
Texas	2	16.0
Iowa	3	15.1
Nebraska	4	12.0
Kansas	5	10.3

Notable Increases in Cash Receipts:

Apples	40%
Cabbage	25%
Celery	25%
Cherries, Sweet	47%
Grain, Sorghum	25%
Grapes, Table	23%
Lemons	37%
Lettuce, Leaf	29%
Lettuce, Romaine	41%
Potatoes, Summer	29%
Plums, Dried	90%
Raspberries	24%
Tomatoes, Fresh	45%
Tomatoes, Processing	11%

Notable Decreases in Receipts:

Apricots	32%
Cottonseed	37%
Oats	58%
Olives	77%
Onions, Spring	35%
Oranges, Navel	36%
Oranges, Valencia	38%

Crop and Livestock Commodities in which California Leads the Nation

Almonds	Dates	Lettuce, Leaf	Pistachios
Apricots	Eggplant	Lettuce, Romaine	Plums
Artichokes	Escarole/Endive	Melons, Cantaloupe	Plums, Dried
Asparagus	Figs	Melons, Honeydew	Pomegranates
Avocados	Flowers, Bulbs	Milk	Raspberries
Beans, Dry Baby Lima	Flowers, Cut	Milk Goats	Rice, Sweet
Beans, Dry Large Lima	Flowers, Potted Plants	Nectarines	Safflower
Beans, Green Lima	Garlic	Nursery, Bedding Plants	Seed, Alfalfa
Bedding/Garden Plants	Grapes, Raisins	Nursery Crops	Seed, Bermuda Grass
Bee Colonies	Grapes, Table	Olives	Seed, Ladino Clover
Boysenberries	Grapes, Wine	Onions, Dry	Seed, Sudan Grass
Broccoli	Greens, Mustard	Onions, Green	Seed, Vegetable and Flower
Brussels Sprouts	Hay, Alfalfa	Parsley	Spinach
Cabbage, Chinese	Herbs	Passion Fruit	Squash
Cabbage, Fresh Market	Honey	Peaches, Clingstone	Strawberries
Carrots	Jojoba	Peaches, Freestone	Tomatoes, Processing
Cauliflower	Kale	Pears, Bartlett	Turnips
Celery	Kiwifruit	Peas, Chinese	Vegetables, Greenhouse
Chicory	Kumquats	Peppers, Bell	Vegetables, Oriental
Cotton, American Pima	Lemons	Persimmons	Walnuts
Daikon	Lettuce, Head	Pigeons and Squabs	

California is the sole producer (99 percent or more) of the commodities in bold.

Farm Facts

The number of farms operated in California during 2006 was 76,000, less than 4 percent of the national total. The state was home to 10 percent of U.S. farms having sales of \$500,000 or more during the year. The average California farm or ranch operation produced \$413,000 in commodity sales during the year, more than 3 times higher than the U.S. average of \$114,000 per farm. In 2006, California's land devoted to farming and ranching totaled 26.1 million acres, down less than 0.5 percent from the previous year. The average farm size was 346 acres, compared with the U.S. average of 446 acres.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$25.0 billion in value for 2006. Ten commodities exceeded \$1.00 billion in value. Avocados joined the top 20 list for 2006, while all peaches dropped from 19th to 23rd in the commodity rankings. Milk remained the number one commodity in 2006, followed by grapes, and nursery and greenhouse products.

Leading Counties

California has some of the most agriculturally productive counties in the nation. According to the 2002 Census of Agriculture's ranking of market value of agricultural products sold, nine of the nation's top 10, and 12 of the top 20, producing counties are in California.

California's county Agricultural Commissioner reports showed a slight decrease of 0.9 percent in the value of their agricultural production for 2006. Fourteen counties reported a value of production in excess of \$1.01 billion. Fresno continued as the leading county with an agricultural production value of \$4.84 billion, an increase of 4.4 percent from the 2005 value. Tulare County was second in value of production with \$3.87 billion, 11.2 percent below 2005. Monterey had an increase of 4.3 percent in production to \$3.49 billion, moving the county to third in value. Kern's decrease of 2.1 percent to \$3.48 billion in agricultural production, dropped the county to fourth in value.

Weather Highlights for 2006

January began with a sequence of dynamic Pacific storm systems, which brought heavy rain to northern and southern California. The abundance of rain caused flooding in some fields and delayed planting dates. Heavy rainfall caused an increased spraying of herbicides. However, the rain was highly favorable for several grain crops. Later in the month, there was a high-pressure ridge over the west coast, which brought dry and mild weather. As a consequence of the high-pressure, there were cooler temperatures and dry conditions. Fieldwork finally resumed, but not in places where water was standing.

Dry and unseasonably warm weather conditions persisted from the end of January, while February weather was variable. A cold front moved over northern California bringing showers to the mountains. Daytime highs in the central valley and southern California dropped 20 to 25 degrees. Ample soil moisture and modest temperatures created outstanding growing conditions. Fieldwork continued in preparation for spring planting.

March and April brought a substantial amount of precipitation. Mild temperatures and a large quantity of rainfall prompted fruit and nuts crops to bloom.

A wet weather pattern persisted at the beginning of April. There were strong Pacific storm systems that moved across the west coast, which resulted in a considerable amount of rain and mountain snow in northern California. Nectarines, other stone fruits, and apricots were being thinned. Harvesting of all citrus fruit resumed after being stopped due to wet soil and rainy conditions. However, alfalfa cuttings were damaged by precipitation, and cotton and rice planting was delayed by the wet conditions. Planting resumed as the fields dried out.

High pressure across the state in early May led to sunny skies and very warm conditions. A storm system associated with a Pacific low brought showers and cool air into northern and southern California. Modest high-pressure ridges persisted for the remainder of May causing warm and dry conditions for the state as temperatures reached normal. Hot and dry weather boosted field crop growth and caused small grains to dry.

Temperatures in June were unstable with influence from both high and low-pressure systems. Patterns of low pressure brought cooler temperatures and minimal precipitation. The need for irrigation increased as high-pressure brought hot weather. Hay drying conditions were improved with warm temperatures.

July began with cooler than normal temperatures due to a low-pressure trough. Later, heat waves swept across California. Record setting temperatures damaged crops and caused the deaths of substantial numbers of livestock and poultry. Subtropical moisture circulated around the high-pressure system and increased humidity, with unusually warm overnight temperatures.

High-pressure systems continued through the first couple of weeks of August. Moisture began circulating due to a low-pressure system that caused thunderstorm activity. A low-pressure system generated heavy showers and the temperatures became cooler than normal. Livestock were moved to irrigated pastures and dry foothill pastures. Some livestock received protein and other supplements as hot weather decreased forage quantities. Cotton, corn, and beans progressed well with the moderate temperatures.

September was mainly dry. A fall-like pattern set up over California with an upper-level high-pressure ridge. Very dry air and dry grasses signaled high fire dangers across much of the state that led to red flag warnings in some areas.

Weather in October displayed typical dry and mild fall patterns. An upper-level high-pressure was centered over the four-corner region that caused some light rain in the northern and central coast. For interior portions of southern California, including the Imperial Valley, temperatures were below normal. A series of cold fronts passed through the state, but the only effect was cooler temperatures with no significant precipitation occurring.

The first active storm system began in November and shifted southward from the Pacific Northwest, bringing the first significant snow of the season. There was steady precipitation in the northern central valley and also in the mountains of northern California. A series of weak Pacific frontal systems passed through the Pacific Northwest and brought occasional showers and cooler temperatures to California.

December began with a cold front that caused wet weather across California. A series of Pacific weather systems brought showers and cool temperatures with widespread freezing temperatures across the interior valleys of northern and central California. At the end of December, another Pacific storm system approached northern California spreading showers and cooler temperatures across the northern coast, while southern California remained dry and warm. Ranges and pastures were in better condition as result of the rain.

Global Marketplace

The year 2005 (the last year for which export statistics are available) set a new record for California's agricultural exports, surpassing \$9 billion for the first time. This represents a 13 percent increase over 2004 and a 24 percent increase over 2003. California exports agricultural products to almost 150 countries, but the 10 principal destinations accounted for 72 percent of the 2005 export value. The leading four destinations - European Union, Canada, Japan and Mexico - accounted for 56 percent of total exports. For three years, the European Union has been the key destination for California agricultural exports, accounting for 22 percent of the 2005 export value. Principal commodities shipped to the European Union are almonds, wine and pistachios.

Even though the major market for California agricultural production is still the rest of the nation, foreign markets have become relatively more important in the past six years. In 1999, only 16 percent of local production was being shipped to overseas markets, whereas in 2005 this figure was 22 percent. Clearly, California agriculture is enjoyed around the world.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

3/ Based on values published in the county agricultural commissioners' annual crop reports.

4/ Share of U.S. production based on 2002 Census of Agriculture.

5/ The 2006 price and value are based on the 2005 California average price.

6/ Extracted from county agricultural commissioners' annual crop reports.

7/ Includes sunflower, safflower, and canola.

8/ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

9/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.
