## F O R E W O R D

Since 1969, the California Crop and Livestock Reporting Service has endeavored to record and publish current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially premium varietals, in areas which up to that time had not been major grape growing regions. Of additional concern were acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. The drastic changes during that time period have been tabulated and released in annual grape acreage publications with data showing varietal and geographic changes affecting the grape industry.

The need continues to keep abreast of new plantings and geographic change. It is also one of accurately tabulating decreases in acreage due to removals, graftings, corrections and planting failures. The acreages, varieties, locations and ages of removals are now of greater concern than they were previously. To this end, with matched funds supplied by the Grape Industry and the United States Department of Agriculture, the Crop and Livestock Reporting Service has again compiled acreage statistics for use by interested persons.

## S U R V E Y M E T H O D S

A questionnaire was mailed to vintners, grapestake suppliers, Farm Advisors, County Commissioners and licensed nurseries to aid us in developing a list of new growers. Names which they supplied on the questionnaire were screened against current records to avoid duplication of operators and their acreage. After the list of new growers was developed, each was mailed a questionnaire on which they could record their acreage.

Following completion of the 1980 survey, corrected questionnaires were used to update the fruit acreage master files. Changes reflecting all information obtained from the previous grape acreage survey, from County Commissioners and our own fruit acreage surveys were used in the update. From these updated fruit acreage files, grape plantings for nearly 16,000 parcels and over 9,600 operators were transferred to the 1981 grape acreage schedules. Each farm's grape acreage was listed with information concerning grape variety, year of planting, vine counts, vine spacing and net acreage at the location described on the questionnaire. The questionnaires were mailed during mid-January to all known operators asking for necessary changes and corrections to be made and returned to the Crop and Livestock Reporting Service.

All growers with more than 200 acres in their operation were designated to be enumerated, as were 3 out of 4 of those respondents having 50.0 to 199.9 acres and 1 out of 20 of those having 20.0 to 49.9 acres and 1 out of 50 of those having under 20 acres. The growers not responding by mail in this sampled group were enumerated by telephone or personal interview. All field work and telephoning was completed during March and April.

Acreage covered by mail returns and enumeration accounted for about 95 percent of the total grape acreage. About 5 percent were estimated for by sample.

Timing of the survey was changed from summer to spring with the 1975 survey. This was done to enable a more accurate accounting of removals. This summer surveys were primarily designed to record new plantings. Removal data for 1976 and later surveys was recorded by additional questions on the regular

questionnaire. Removal data was collected in the 1975 survey with a separate questionnaire. Grafting data was recorded by additional questions on the regular questionnaire beginning with the 1980 survey.

#### D A T A   L I M I T A T I O N S

General: This report provides acreage data at several levels of detail. Although the procedures used were designed to minimize the impact of sample variations on the results, users are cautioned that the figures provided at the level of finest detail are subject to more sample variation than those at a gross level. The highest level of precision will, of course, be found at the State level for all grapes and for the three grape types. Somewhat less precision should be attached to data provided for minor varieties. An extreme example would be of a single grower of a minor variety in a county. If he were drawn in the sample of nonrespondents, the expansion process would exaggerate the county acreage for that variety.

Cases such as this were not frequent and careful consideration was given to all aspects of each individual case before estimates were made.

A high percentage of the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed and incomplete or questionable reports were resolved by secondary contact with the respondent. However, for most operations, the reported variety, acreage and year planted were accepted as reported.

Comparison of the current inventory of 1980 and earlier plantings with those published a year ago reveals differences. The current estimate of 1980 plantings is higher because the 1981 survey accounted for acreage that was not included in the 1980 survey and all graftings in 1981 were designated as planted in 1980. Other factors affecting data for all years are variations due to sampling procedures and changes by growers in acreage, variety and year planted information reported in earlier surveys. A complete fruit and nut acreage survey was conducted in Amador, Butte, Calaveras, Lake, Placer, San Bernardino, Santa Barbara, Santa Clara and Tehama counties since the 1980 grape acreage survey report. Personnel in the agricultural commissioner offices in Monterey, Napa and Sonoma counties did a complete enumeration of the grape acreage in their respective counties.

Varieties: Data are provided for each variety with 50 or more total acres standing in 1981. Acreages for all other varieties are combined in "Other" categories. Data are shown individually for 93 varieties including 62 wine types. Care was taken to properly identify each block reported with a recognized varietal name. However, a reasonable variety reported by the respondent was accepted with no further verification.

Beginning with this report, total white wine varieties and total black wine varieties have been included by year of planting. Bearing and non-bearing acres of black and white wine varieties within each county are shown in Table 12.

Footnotes are explained on page 34.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock is budded over, the year of planting assigned to that block of grapes is the year preceding the budding. For instance, if a 1978 rootstock planting is budded over in 1981, the year of planting assigned to the selected variety would be 1980.

Period Covered: The primary intent of the 1981 project was to record removals of grapes since the 1980 harvest and new plantings of grapes during 1981. Planting activity is accounted for on a calendar-year basis. Removal data pertains essentially to the period between the 1980 and 1981 harvests. In 1971 and 1972, we collected planting information on a July 1 to June 30 basis. Because of increased planting activity after mid-year since 1971, and because of many requests for data users, we changed to a calendar-year basis for plantings with the 1973 report. For the 1973 and subsequent reports, growers were asked to report grapes actually planted during the year up to the time of their report and in addition, plantings intended to be made prior to the end of the year. No effort will be made to resolve inconsistencies with inventories published in those earlier reports.

IMPORTANT NOTICE: Removal tables on page 6 of this bulletin have been reworked with corrected data since the May 3, 1982 release. An incorrect interpretation of "removals" caused the preliminary removal estimate to be inflated for the 1980-81 data.

### ACKNOWLEDGEMENTS

This survey was again undertaken at industry request. It was supported by contributions from the Wine Institute, California Raisin Advisory Board, California Table Grape Commission and the California Brandy Advisory Board with matching funds furnished by the United States Department of Agriculture.

We express our gratitude to vintners, nurseries, County Commissioners, grapestake firms, Farm Advisors and others who supplied us with the names of individuals who planted grapes during the year. We also express our appreciation to farm owners and operators who provided information to us on their individual operations. Their forthright cooperation was greatly appreciated.

The complete enumeration of grape acreages in Monterey, Napa and Sonoma counties by the personnel in the county agriculture offices was appreciated and worthy of special mention.

Finally, a special thanks goes to the field enumerators and office personnel whose efforts and diligence made this report possible.
