17. Sacramento and Yolo counties west of Interstate 5 and south of Interstate 80

GRAPE CRUSH REPORT

Information contained in this report was supplied by vintners to fulfill the reporting requirements of Section 55601.5 of the Food and Agriculture code.

This report includes all grape tonnage crushed and all tonnage purchased and prices as of February 25, 1981 by California vintners. Data by varieties are shown for seventeen grape reporting districts as well as for the State totals. In some cases, individual variety price information and tons purchased have been omitted for one or more districts to avoid disclosure of individual operations. However, the prices and tons are included in State and district averages and totals.

Total grapes crushed in 1980 was 2,895,779 tons, which is a 10.7 percent increase over the 1979 total crush of 2,616,203 tons. The weighted average degrees Brix for all grapes crushed in 1980 was 20.6, which is four percent lower than last year's figure of 21.4.

The reported weighted average degrees Brix for grapes purchased was 20.6. The weighted average price per ton for grapes reported as having a final price was \$189.52 for all varieties. This is 3.1 percent lower than the 1979 price of \$195.56. Weighted average price for raisin type grapes was \$143.57 per ton, table type grapes was \$144.09, and wine type was \$210.22 per ton.

The 1980 weighted average price per ton for all grapes purchased as distilling material for other than beverage brandy was \$69.43 per ton compared with \$78.38 in 1979. The degrees Brix for distilling material grapes was 21.4 in 1980 and 20.7 in 1979. The net distilled tonnage for the 1980 crop is 44,241 tons compared with 10,329 distilled tons last year.

DEFINITIONS

Tonnage Crushed: Totals reported reflect the quantity crushed by variety and Grape Reporting District where the grapes were grown. Minor tonnages (less than 25 tons) are not included by varieties but are included in district and state totals. Packinghouse culls are included in

Tonnage Purchased: Purchased tonnage reflects totals by variety and district where grown for all grapes with final prices not subject to change. Minor tonnages (less than 25 tons) are not included by variety but are included in district and state totals. Grapes pooled by cooperatives and those grown by wineries and used for their own production are not included in purchases.

Weighted Average Prices: Prices reflect actual weighted averages of final prices not subject to further revision. Prices do not include grower returns for tonnage pooled by cooperatives or returns for grapes grown by wineries and used for their own production. Adjustments for sugar calculations and any bonuses or allowances are included.

The weighted average prices reported by variety and district are final prices for grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy. Final prices for grape distilling material other than beverage brandy are shown separately.

Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling costs for delivery outside the area.

Base Prices: Base prices in this report are subject to adjustments to reflect quality of grapes when delivered. Adjustments principally reflect sugar content, but may reflect other quality factors such as defects or material other than grapes.

Average Degrees Brix: Degrees Brix for tonnage crushed are weighted averages based on reports from cooperatives and independently owned wineries. Degrees Brix for purchased grapes are weighted averages based on tonnage where price is final and not subject to change.

Brix Adjustment Factors: The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

EXPLANATION OF TABLES

Table 1: Table 1 includes all grape tonnage crushed including distilling materials by California wineries. This table is broken down by the 17 reporting districts by variety. The 1979 and 1980 state totals by variety are shown for comparison purposes. District totals are shown by grape type and total of all varieties. Tonnages of less than 25 for any variety are not displayed by districts. These minor tonnages are included in the state and district totals.

Table 2: Table 2 comprises the weighted average degrees Brix for all grapes crushed including distilling materials by California wineries from the 1980 crop by type, variety, and reporting district. The 1979 and 1980 state averages are shown for comparison purposes.

Table 3: Table 3 shows the total tons of grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by all California wineries from the 1980 crop. Table 3 does not include tonnage purchased for distilling material. This table gives totals by type, variety, and reporting districts where grown. The 1979 and 1980 state totals are given for comparison purposes. Some tonnages are not shown to avoid disclosure of individual operations.

Table 4: Table 4 shows the weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by all California wineries from the 1980 crop. Distilling material grapes are not included. This table gives totals by type, variety, and reporting districts where grown. The 1979 and 1980 state totals are given for comparison purposes.

Table 5: Table 5 gives the weighted average price per ton of all individual winery reports received. This weighted average price is for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California wineries from the 1980 crop. This does not include the price per ton for grapes purchased for distilling materials. Prices include all sugar bonuses or allowances as well as within area hauling. This table gives totals by type, variety, and reporting districts where grown. The 1979 and 1980 state totals are given for comparison purposes.

The following example indicates the method used for calculating weighted averages.

Variety	Total Grapes Crushed		Net fresh weight Tons	Weighted average degrees Brix	Total Brix	Base price per ton	Brix adjustments per ton plus and minus	Brix Limits			Actual final price paid by winery to grower at each base price and Brix adjustment factor including bonuses or allowances Dollars/Ton	Total	Weighted average price per ton

Column 6 (weighted average degrees Brix) was obtained by dividing the total Net Fresh Tons, (Column 5) into the total Brix of these same tons $\frac{2,695.75}{131.1} = 20.6$

Column 13 (weighted average price per ton) was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons $\frac{\$50,514.75}{131.1} = \385.31

Table 6: Table 6 shows the tons of grapes purchased by California wineries for distilling material from the 1980 crop. Average degrees Brix and average price per ton are shown by type and variety. The 1979 and 1980 state totals are given for comparison purposes.

Table 7: Table 7 shows base price paid to growers by Brix factors by percent of variety. Base prices do not include any sugar bonuses or hauling allowances. A weighted average of all base prices is shown by variety.

a/ See code descriptions page 36.

b/ Less than 0.1 percent.

c/ Price basis per degree Brix.

d/ Price per degree Brix not included in weighted average price.

e/ All prices based on per degree Brix.

Table 7 (Supplement)

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most wineries, however, indicate a minimum Brix acceptance level and grapes testing below that level may be subject to price renegotiation or rejection by the winery. There are factors other than Brix, such as material other than grape (MOG), defects, and sugar-acid ratios that affect grape prices. These were not considered in this presentation, but were considered in arriving at weighted average prices. NOTE - Brix adjustment factors added since release of the Preliminary report are shown on page 40.
