

FOREWARD

This citrus publication is the Fourteenth Annual Citrus Statistical Summary released by the Statistical Reporting Service and is made possible through the cooperation of the Florida Department of Agriculture and the Florida Citrus Commission. The Office of the Agricultural Statistician, Statistical Reporting Service, Orlando, cooperating with the State Department of Agriculture and Growers Administrative Committee collected and/or assembled the data. The Florida Citrus Commission furnished funds for materials and did the actual multilithing.

The Statistical Reporting Service, through its office in Orlando, would like to take this occasion to express its appreciation of this cooperative spirit shown by those connected with the Citrus Industry and to acknowledge the statistical and financial aid of the Citrus Commission, the Citrus and Vegetable Inspection Division, Florida Department of Agriculture, the Growers Administrative Committee, the cannery data furnished by the Florida Canners' Association and the considerable volume of basic data given by the citrus growers, packers, and processors.

CITRUS SUMMARY

HISTORY 1/

The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Petro Medendez, dated April 2, 1579, it appears that citrus fruits were growing in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the State.

The citrus tree is a native of the Orient. It was carried ever westward and was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518.

The oldest cultivated grove planted in Florida (Hume, 1926, p. 95) is thought to be the Don Phillippe grove in Pinellas County, planted some time between 1809 and 1820.

PRODUCTION

Citrus production in Florida had reached the all-time high of 6 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It took fourteen years to reach this level of production again.

Florida surpassed all other States in citrus acreage in 1932-33 with 265,400 acres, which accounted for 46 percent of the United States total acreage. By 1960-61, Florida's 520,900 acres of bearing groves comprised 64 percent of the total citrus acreage in the United States and produced 69 percent of the total United States tonnage. This was 124,500,000 boxes for Florida out of United States total of 180,275,000 boxes. California in

1/ See Citrus Industry by Webber & Batchlor, pages 19, 22, 25, and 27.

1919-20 accounted for 60.3 percent of the total United States production, but by 1960-61 had dropped to 23 percent of the total United States tonnage with 41,240,000 boxes on 195,300 acres. California's largest crop was produced in 1944-45 with 76,880,000 boxes produced. Texas had a phenomenal expansion of citrus acreage between 1920-21, when only 600 acres were planted, to 1948-49 with its 122,500 acres. Most of this acreage was grapefruit. Then came the freezes of 1949-50 and 1950-51, which reduced acreage to 38,100 acres, but by 1960-61 had increased to 76,000 acres. Production was reduced from the 1945-46 high of 28,800,000 to 500,000 in 1951-52, but by 1960-61 it had increased to 10,300,000 boxes. The cold damaged trees have not come back into production as expected. New plantings are being made, with nearly two million grapefruit trees and a million orange trees moved from nurseries since 1953; however, they have again been hit by a major freeze.

NOTE - Net contents of box varies. For California and Arizona, 77 pounds for oranges, 65 to 68 pounds for grapefruit. Florida and other States use a larger box of 1-3/5 bushel capacity. The Florida citrus code defines an equivalent box for bulk fruit as 90 pounds for oranges, 85 pounds for grapefruit and 95 pounds for tangerines.

TREE NUMBERS

It is estimated that there are 36.9 million producing citrus trees growing in commercial groves in the State of Florida. Of these, 25.8 million are orange trees of which 12.8 million, or 49.6 percent, are Early and Mid-Season type. Of the total orange production of 86,700,000 boxes in 1960-61, 51,000,000 boxes or 59 percent were Early and Mid-Season type. Late type orange trees number 13.0 million, or 50.4 percent of orange tree total, and accounted for 35,700,000 boxes or 41 percent of the orange production.

Of the 6.0 million grapefruit trees, approximately 32 percent are seedy type and 68 percent are seedless type. Seedy type accounted for 12,400,000

boxes or 39 percent out of a total of 31,600,000 and seedless type produced 19,200,000 boxes or 61 percent of the total grapefruit.

Tangerines accounted for approximately 3.9 percent of the total citrus production in 1960-61, with a little more than 1.0 million trees producing 4,900,000 boxes.

Lime trees accounted for 6,000 acres and produced 310,000 boxes in 1960-61.

Freezing weather during 1957-58 reduced Florida's tree numbers, but heavy planting of new trees assures continued expansion.

Revision of tree numbers were made, based upon the continuing tree count survey.

NON-BEARING ACREAGE

It is estimated that as of June 30, 1960 there were 131,300 acres of non-bearing citrus trees planted in Florida. This consists of 112,900 acres of oranges; 1,200 acres of tangerines; 5,400 acres of mircottas; 4,000 acres of tangelos; 5,200 acres of grapefruit and 2,600 acres of lemons and limes.

PRICES

Prices have varied from the lows of the late thirties, when for the season of 1938-39 the equivalent on-tree from all methods of sale returned 22 cents per box for grapefruit, to the high of 1949-50 when equivalent on-tree return for grapefruit, all methods of sale, climbed to \$1.79 per box and in the 1960-61 season it was 94 cents. Oranges returned a record high of \$3.01 per equivalent box for all methods of sale for 1960-61. This is well above the previous record high of \$2.88 per box in the 1958-59 season. The record low post-war price was in 1947-48 when it was 63 cents per box. The on-tree crop value of all citrus fruit to Florida growers for the 1959-60 season was a record high of \$296,505,000.
