

DOYLE CONNER  
COMMISSIONER

STATE OF FLORIDA  
DEPARTMENT OF AGRICULTURE  
THE CAPITOL  
TALLAHASSEE

Dear Fellow Citizens:

A vital ingredient in an effective marketing program for any agricultural commodity is the availability of current, accurate statistical information in an understandable form.

It is a pleasure for the Florida Department of Agriculture to cooperate with the U. S. Department of Agriculture in presenting the first comprehensive report on historical livestock statistics for the State of Florida.

As Florida's Commissioner of Agriculture and a beef producer, I am highly cognizant of the important role which this statistical summary will play in meeting a long-felt need in our livestock industry.

We trust that you will find this report a valuable aid, and we welcome your comments and suggestions.

Sincerely,

A handwritten signature in cursive script that appears to read "Doyle Conner".

Doyle Conner  
Commissioner

Carcass Weight Conversions	61
Per Capita Consumption	62

## LIVESTOCK SUMMARY

### Introduction

There has long been a need for consolidating the many statistics on the Florida livestock enterprise. This publication is designed to bring together available livestock statistics from various sources under one cover.

It is hoped that this bulletin will serve a useful purpose to the many people in the livestock field. Copies are available as long as the supply lasts by writing the Florida Crop and Livestock Reporting Service, 1222 Woodward Street, Orlando Florida, 32803.

### Cattle and Calves on Farms

On January 1, 1924, there were 740,000 cattle and calves, including dairy animals. By 1930, numbers had declined to only 590,000. The number gradually increased to a peak of 1,771,000, January 1, 1958, and inventories totaled 1,726,000 head on January 1, 1964.

All classes of beef cattle and calves declined from 623,000 head, January 1, 1924, to 435,000 by 1930. Numbers gradually increased during the thirties and World War II years and gained momentum in the early fifties to 1,416,000 head by January, 1954. Beef inventory fluctuated somewhat for the next decade, with slight increases taking place in the last several years. Beef cattle and calves on farms January 1, 1964, reached a new high of 1,479,000 head, exceeding the previous high of 1,449,000 head on farms and ranches January 1, 1963.

On January 1, 1964, Florida ranked 25th in total cattle numbers in the Nation, 18th in beef cattle and 14th in beef cows, 2 years old and older. Part of this relatively low ranking resulted from a large percentage of Florida's stocker calves being shipped to Texas and other western States. This tends to lower Florida's rank in production of beef animals as well as rank of total beef inventory.

Calves born in 1963 totaled 716,000, or 71 percent of the cows and heifers 2 years old and older on farms January 1, 1963. With the exception of Hawaii, this was the lowest rate in the Nation.

Although Florida's calving rate is relatively low, much improvement has taken place over the years. In 1924, the calving rate was only 45 percent of the cows. By 1945, the rate increased to 65 percent and fluctuated with a general upward trend to the current level.

Cattle and calves on feed in Florida, January 1, 1964, totaled 62,000 head, down 31 percent from the record high of a year earlier, but 35 percent more than January 1, 1960.

### Cash Receipts

Cash receipts from cattle and calves marketed during 1963 totaled \$83,052,000. Despite lower prices than the previous year, this was the second highest of record, surpassed only by the previous high of \$87,768,000 received in 1958. The increase in receipts over 1962 resulted from an increase in marketings.

### Hogs on Farms

Hog inventory in Florida on January 1, 1920, totaled 800,000 head. Numbers declined to less than 500,000 head through the late thirties, but rose sharply during the World War II years to 770,000 head, January 1, 1944. A gradual decline followed with some fluctuation, reaching a record low of 333,000 on farms January 1, 1964.

The pig crop increased from 441,000 in 1924 to a record high of 1,116,000 pigs saved in 1943. Pigs saved gradually declined to 413,000 in 1963. This was about the level of the early twenties. Pigs per litter have shown significant increases over the years. Pigs per litter in 1924 averaged 4.8. Gradual increases occurred during the forties and fifties and by 1961 the rate was 7.0 per litter, a record high annual rate. A new record high will be set in 1964. In the spring of this year, pigs per litter averaged 7.5, a new high for spring farrowings.

Gross income from hog production totaled \$11,338,000 in 1963. This compares with the record high of \$21,620,000 in 1952.

Inspection stations for checking livestock passings are a joint responsibility of the Division of Inspection and the Division of Animal Industry of the Florida Department of Agriculture. Officials from the Division of Animal Industry check livestock for diseases and pests. Officials of the Division of Inspection check certificates, load weights and perform other related duties.

1/ Balance sheet estimates. Total of marketings, farm slaughter, deaths and on hand end of year equals total of calf crop, inshipments, and on hand beginning of year. 2/ Excludes interfarm sales. 3/ Not strictly a calving rate. Figure represents calves born expressed as percentage of January 1 inventory of cows and heifers 2 years old and over and not the number of all cows and heifers giving birth to calves during the year.

1/ Civilian consumption only, beginning 1941. 2/ Approximately at wholesale level of distribution. 3/ Equivalent eviscerated weight basis. Although most of the poultry was sold in dressed form until the 1940's, most is now sold ready to cook. The entire series was put on the latter basis to achieve comparability. 4/ Measured approximately at wholesale level of distribution. Average weight of eggs 1909-46 is assumed to be 1.5 pounds per dozen; conversion factor subsequently increased 0.01 pound each year through 1952, remained at 1.56 through 1956, thereafter 1.57. This change in factor allowed for the increasing size of eggs marketed. 5/ Not available. 6/ Preliminary.
