## CROP REPORT FOR WEEK ENDING NOVEMBER 11

### AGRICULTURAL SUMMARY

Farmers had an excellent week for harvesting corn and soybeans, along with other field activities, according to the Indiana Agricultural Statistics Service. Wet spots still exist in portions of some fields across the state. Many farmers were able to finish harvesting their soybean fields and complete seeding of winter wheat. Corn harvest is 3 days behind average. Lodging of corn plants remains a major problem. Delays have also occurred at some elevators. Farmers were also tilling soils, chopping stalks, repairing and cleaning up equipment, moving grain to market, tiling, hauling manure, spreading fertilizer and lime during the week.

### FIELD CROPS REPORT

There were 6.4 **days suitable for fieldwork**. Eighty-two percent of the corn acreage is **harvested** compared with 97 percent a year earlier and 87 percent for the 5-year average. By region, 74 percent of the corn acreage is harvested in the north, 83 percent in the central region and 97 percent in the south. **Moisture** content of harvested corn is averaging 17 percent.

Ninety-six percent of the soybean acreage is **harvested** compared with 99 percent last year and 98 percent for the average. By region, 95 percent of the soybean acreage is harvested in the north, 97 percent in the central region and 96 percent in the south. **Moisture** content of harvested soybeans is averaging 11.5 percent.

Ninety-eight percent of the **winter wheat** acreage is seeded compared with 100 percent last year and 99 percent for the average. Eighty-three percent of the winter wheat acreage is **emerged** compared with 93 percent last year and 90 percent for the average.

### LIVESTOCK, PASTURE AND RANGE REPORT

Pastures continue to be in mostly good condition. Livestock are in mostly good condition.
