Week ending October 2, 2016

Issued weekly on the internet, April - November by the Northeastern Regional Field Office of NASS nassrfoner@nass.usda.gov
www.nass.usda.gov/de
Released October 3, 2016

Poor Week for Field Work: The state of Maryland had an average of 3 days and Delaware had an average of 2 days suitable for fieldwork. The region experienced torrential rain during the last week of the month, specifically during Saturday the 29th, which brought much needed moisture in our crop fields; however, corn and soybean harvest has been stopped until the ground dries. Rainfall reached a maximum of over 9 inches of rain in Salisbury, MD and Georgetown, DE in a 5 to 6 day period. Temperatures reached a high at $80^{\circ} \mathrm{F}$ and a low at $48^{\circ} \mathrm{F}$. In Maryland, Corn harvested for grain activities was behind compared to last year's average and tomatoes field harvested is nearly finished for the season. In Delaware, winter wheat planting activities were intermittent and corn for grain is mostly in good condition. For the most part, field work activities were limited to hay cutting, tomato, vegetable, corn for grain, soybean, and apple harvesting as well as cover crop planting.

## Baltimore County, MD - David Martin

4 days of rain is quite welcome; however, puts a damper on corn harvest.

## Calvert County, MD - Chris Dowell

Received 5.0" - 7.0" of rain.

## Frederick County, MD - Charles Schuster

The region had cloudy moist conditions most of the reporting period. 3.2 inches of rain fell during this period of time. This stalled most harvest of all crops. Pastures still are stressed as it has gotten cool and not as much growth occurs with the shorter days. Soybeans have colored and lost many leaves during the reporting period.

## Harford County, MD - Patricia Hoopes

We finally received some much needed rain although it interrupted harvesting for apples, pumpkins, corn and soybeans

## Howard, MD - Charles Schuster

The region had cloudy moist conditions most of the reporting period. 2.9 inches of rain fell during this period of time. This stalled most harvest of all crops. Pastures still are stressed as it has gotten cool and not as much growth occurs with the shorter days. Soybeans have colored and lost many leaves during the reporting period.

## Somerset County, MD - Jarrod Miller

Storm conditions in the last two weeks have totaled close to twenty inches in some locations. Some storms dropped up to 8 inches in a few hours. Soils in lower landscape positions remain flooded or saturated, slowing down harvests.

Worcester County, MD - Jessie Flores
We have had a tremendous amount of rain (8+in) in 2 days and have had major flooding on roadways, fields, and ditches.

## Sussex County, DE - Harry Hudson III

Incredibly heavy rains throughout the week - Some places over a foot of rain - Fields flooded. Corn harvest is brought to a standstill for at least a week. New hurricane may hit next weekend. Soybean harvest? Some Lima beans still out there. Hopefully chicken houses are not flooded out.
