NEBRASKA WEEKLY WEATHER AND CROP REPORT

Release 6/26/67

Week Ending 6/26/67

WEATHER The week was quite cool and showery. Temperatures averaged about 10 degrees below normal across the State. Showers and thundershowers occurred throughout the State on Tuesday, Thursday, and Friday. Amounts were generally one to two inches with a few small areas receiving up to four inches.

CROPS Field work was limited by rains and lack of warm, drying weather. Some sorghums and soybeans were being planted or replanted as weather permitted. Row crops are very weedy, especially where herbicides were not used as a pre-emergence control. Herbicides are being used quite extensively now with some applications being made by plane. Cultivation is accomplished when possible. Corn is off color in some areas showing effects of too much rain and the leaching of nitrogen fertilizer.

Wheat is ripening in southern counties, but it is too wet for harvest. About 70 percent of the crop is turning. Locally severe hail storms caused losses of wheat in the Panhandle. The condition of the crop was down slightly from last week reflecting wet and cool weather and damage from hail in western districts.

About 50 percent of the first cutting of alfalfa has been harvested. Fields are too soft for harvesting equipment in many areas.

Sugar beets are making good progress with about 75 percent of the thinning completed. Scattered hail storms damaged some of the beets, but many farmers are leaving the crop and hoping for a partial recovery of plants. Potatoes are doing well with continued planting in some areas. About 90 to 95 percent of the dry beans are planted with rains causing problems of soil crusting.

Pasture and range grasses made excellent growth. Some low land pastures were damaged by flooding, and recovery will be slow. Wild hay harvest on low land meadows will be delayed until water recedes and fields dry.

LIVESTOCK There was little improvement in the condition of livestock as cool, wet weather and muddy feed lots limited gains. Cattle in the range area were finding adequate feed on summer ranges.

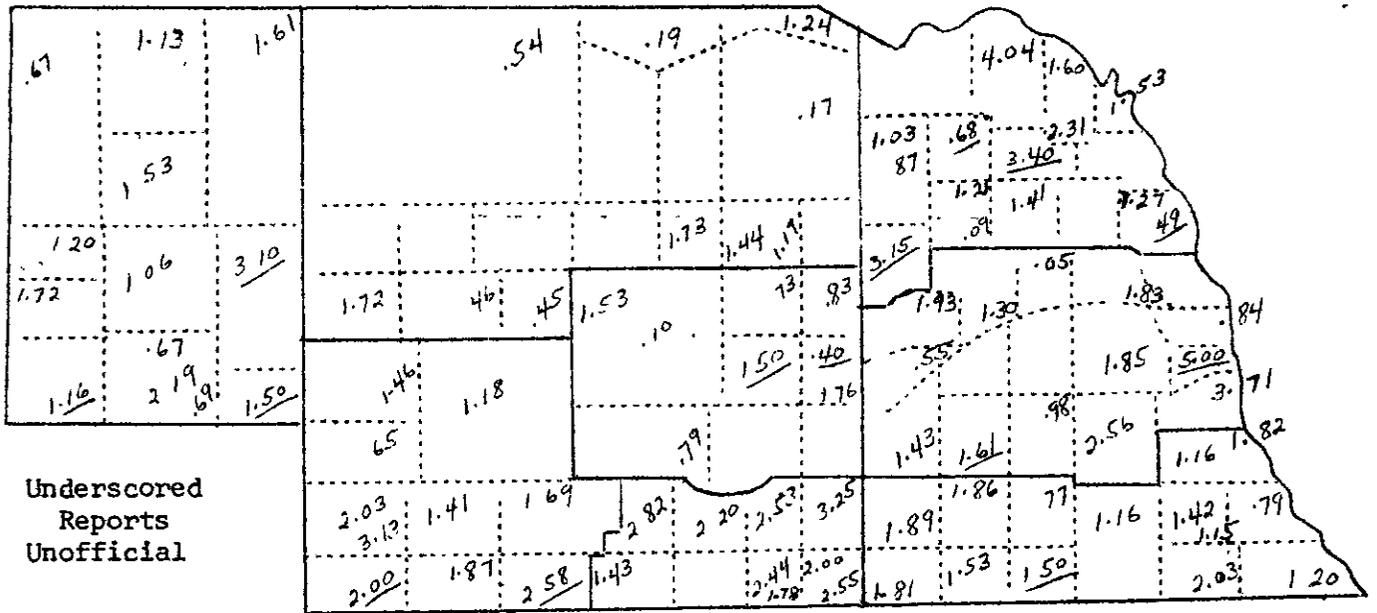

WEATHER BUREAU TELEGRAPHIC REPORT OF PRECIPITATION FOR WEEK ENDING JUNE 25, 1967

East		Central		West	
Grand Island	1.76	Burwell	1.44	Chadron	1.13
