Texas Wheat Production Estimated at 124.3 Million Bushels

According to a July 1 survey conducted by the USDA-NASS, Texas Field Office, Texas wheat producers expect to harvest 124.3 million bushels, up from 61.3 million in 2009 and up 26 percent from 2008. This forecast is up one percent from the June forecast.

Statewide yield is expected to average 35 bushels per acre, up 10 bushels from last year, and up 5 bushels from two years ago. Harvested acreage for grain is up 50,000 acres from June at 3.55 million acres and up 45 percent from 2009.

Production on the Northern High Plains is forecast at 53.1 million bushels, up 40 percent from last year. Winter wheat production in the Blacklands is forecast at 10.2 million bushels, up 38 percent from last year. The Low Plains' production is estimated at 38.1 million bushels, up from 7.4 million bushels last year.

United States winter wheat production for 2010 is forecast at 1.51 billion bushels, up 2 percent from last month but down 1 percent from 2009. Yield is expected to average 46.9 bushels per acre, 2.7 bushels more than a year ago. Acreage to be harvested for grain is expected to total 32.1 million acres, down 7 percent from last year.

¹ July 1, 2010. ² Yield is rounded to the nearest half bushels.

The July wheat yield and production forecast are based on two surveys conducted by the Texas Field Office of USDA-NASS: a farm operator survey and an objective yield survey. The farm operator survey was conducted primarily by telephone with some use of mail, internet and personal interviewers. The objective yield survey collects actual stalk counts and head weights from plots set up in producer fields across the state.
