**ACKNOWLEDGMENT**

This publication summarizes basic information concerning Florida's poultry industry. It is intended for the use of poultrymen, allied industries and all others who are interested in poultry production.

Many producers, hatcherymen, marketing agencies and others voluntarily supplied information used to develop these statistics. Their cooperation is sincerely appreciated.

This report is made possible through a cooperative effort of the Florida Crop and Livestock Reporting Service, the Bureau of Market News and the Poultry and Egg Section of the Division of Inspection. Production and inventory data are official state and USDA statistics prepared by the Florida Crop and Livestock Reporting Service.

This publication was prepared under the direction of Van B. Johnson of the Florida Crop and Livestock Reporting Service.

## POULTRY AND EGG SUMMARY

Florida poultrymen received 190 million dollars for broilers, eggs, and other poultry products in 1976. This is an increase of 14 percent from 1975's cash receipts of 167 million dollars. Receipts from the commercial sales of eggs at 120 million dollars were up 18 percent. Producers of broilers received 66 million dollars, a 6 percent increase from last year. Cash receipts for other poultry products also increased and contributed the remaining portion to total cash receipts.

In 1976, eggs returned to producers an average of 50.7 cents per dozen, up 6.6 cents from the previous year. Broiler prices at 22.7 cents per pound, liveweight basis, decreased 2.8 cents from returns to broilermen in 1975.

During the 15 years preceding the 1970's, the average size of commercial egg flocks in Florida grew steadily. After reaching a peak of 12,283,000 layers in 1971, flock

size declined in 1972 and 1973, and stabilized at about 11,800,000 in the 1973-75 period. In 1976 the average number of layers increased to 12,041,000.

The daily rate of lay per 100 layers in 1976 at 64.6 eggs was virtually unchanged from last year. However, the increased flock size and an extra day for production due to leap year resulted in a 2 percent increase in egg production. The 2,846 million eggs produced nearly equaled the record production of 2,852 million produced in 1974.

During 1976 commercial hatcheries produced 129.6 million straight run chicks. Broiler-type chicks at 89.6 million, accounted for nearly two-thirds of the total, with egg-type chicks making up the remaining third. Hatch for broiler-type chicks was up 14 percent. Egg-type hatch at 40.0 million was up 6 percent.

### TERMS AND DEFINITIONS

**MARKETING YEAR**--Poultry production, price and value statistics since 1970, are for the marketing year beginning December 1 through November 30. All statistics prior to 1970 are on a calendar year basis. For comparability, in those tables where monthly data are shown, December entries always refer to the preceding year. All hatch and hatchery placement data are reported on a calendar year basis.

**BROILERS** are meat-type chickens raised commercially to weights around 2.5-3.5 pounds and usually marketed in 8-10 weeks.

**EGGS** include both table and hatching eggs. Table egg prices are calculated on a farm basis, cases exchanged. They include all grades and sizes, but exclude charges for hauling, grading or packaging. Prices for hatching eggs are not published separately. Annual egg production, price and value statistics are for table and hatching eggs combined.

**OTHER POULTRY** cash receipts include chickens other than broilers, turkeys, turkey eggs and miscellaneous farm poultry products.

**CASH RECEIPTS** are the returns received by farmers for all sales.

**GROSS INCOME** includes cash receipts plus the value of home consumption.

**CURRENT YEAR** data are preliminary and subject to revision.

**SURVEY METHODOLOGY**--Monthly estimates of hens and pullets of laying age, pullets not yet of laying age, and of egg production are based upon data obtained from a sample of commercial chicken and egg producers. This sample is selected from the universe of Florida poultry management units, and includes approximately 80 percent of the total commercial laying flock. Monthly estimates are expected to be within five percent of the value obtained if a complete enumeration were undertaken each month.

During December of each year all known commercial egg producers in Florida are contacted. This complete enumeration establishes the annual universe of management units. Management units include all independent producers as well as contractors who report for all contractees. The table below shows the stratification of the universe established by the annual surveys of December 1975 and 1976, and the number of units in the samples selected for the monthly surveys in 1976 and 1977.

### NUMBER OF MANAGEMENT UNITS IN THE UNIVERSE AND SAMPLE, DECEMBER 1975 AND 1976

STRATA	STRATUM BOUNDARIES		NUMBER OF UNITS			
			UNIVERSE		SAMPLE	
	LOWER	UPPER	1975	1976	1976	1977
1	400	3,299		16		3
2	3,300	9,999	47 1/	18	5 1/	3
3	10,000	29,999	39	36	5	5
