WEATHER IN INDIANA DURING 1988

The winter of 1988 was rather unremarkable, without clues to the devastating drought that was to follow in the spring and summer. January and February temperatures averaged 1 to 3 degrees below normal as cold periods overshadowed the warm, but winter minimums were not unusually severe. Minimums in the 5 to 15 below zero range occurred in early January and again in mid February, producing minor winter injury to wheat and fruit crops.

Only light precipitation and a virtually lack of snow cover in January allowed the ground to freeze to depths of 8 to 15 inches. Snow cover developed in early February to cap off cooling from the ground surface, and soil temperatures levelled off in the low to mid 30s at the four inch depth. Maximum snow depth reached 2 to 4 inches in the south, 4 to 9 inches central, and 6 to 12 inches across the north before the cover melted off in late February.

An early March warmup thawed the ground in all areas by the middle of the month. Through precipitation for March was below normal, it was well distributed through the month and extended into the first week of April. Cumulative totals since the first of January were lagging behind normal, but most fields were wet enough to hamper field work until mid April. Since considerable progress had been made with tillage the previous fall, field operations stayed ahead of schedule despite the slower drying rates of April.

The downturn in temperatures in April, following a relatively warm March resulted in some damage to fruit buds. Buds forced ahead of schedule by the early warming were hit by freezing temperatures during the third week of April. Many apple buds were caught at their most vulnerable stages of blossoming, while peaches were already in post bloom.

Drier weather dominated the latter half of April, and field work accelerated as May arrived. Soil temperatures reached the upper 40s north and as high as the lower 60s in southern Indiana by the end of April, and the readings gained another ten degrees during May. The air temperature contrast in May was more dramatic. Readings in the 30s and 40s at the beginning of the month were followed by Memorial Day temperatures in the 90s.

Meanwhile, the lack of adequate rainfall caused growing concern. A timely episode of rain in late May was not enough to eliminate the growing shortage of topsoil moisture nor allay the fears of drought. June, in fact, brought the object of those fears to full realization. After less than half of the normal rainfall in May, less than a quarter of normal fell during June. Totals of a half inch to an inch around the state represented the driest June on record and resulted in the most intense and widespread drought since the 1930s.

WEATHER IN INDIANA DURING 1988(continued)

Hand in hand with the dry landscape came extreme temperatures, with maximums reaching the upper 90s and 100s during the last week of June. Soil temperatures reached the lower 80s at the four inch depth, while moisture levels sank deeper out of reach of struggling seedlings. Falling soybeans forced replantings in many fields as seed lay in wait for rain.

Significant rains did not return until mid July, and for the rest of the summer crops rapidly consumed whatever moisture came their way. Normal yields of corn and soybeans could not be rescued despite the rains of July and August, and serious soil moisture deficits remained. Hay and forage production suffered a severe decline early in the season, and recovered only gradually during the late summer period.

Abnormally high temperatures persisted through August and into early September, along with higher humidities to add to the stress on people and livestock. The number of days with temperatures of 90 degrees or higher in 1988 ranged between 45 and 60 over the length of Indiana, nearly three times the normal in the north and 50 percent above normal in the southwest.

Below normal precipitation in September failed to provide any late season boost for filling of grain crops or sizing of fruit crops. The dry weather extending into mid October accelerated drydown in the field though, and benefitted early harvest. Later harvest met with some interference from wet weather, but the newly arrived moisture was quickly absorbed by the soils.

Temperatures made a sharp reversal in October, with a freeze occurring in all areas of the state within the first two weeks and temperatures for the entire month averaging 7 to 8 degrees below normal. In a pattern similar to the previous year, the cool and relatively dry October gave way to a wet and relatively mild November.

Above normal precipitation between mid October and mid December trimmed 2 to 3 inches from the deficit created by the dry summer, but the annual totals for the calendar year 1988 were still as much as 8 to 10 inches below normal over large portions of northwest and central Indiana. Topsoils became saturated by the fall rains, while subsoil and ground water deficits were carried forward into the new year.

--John W. Kottke-Agricultural Meteorologist, National Weather Service, Mid-west Ag Weather Service Center, West Lafayette, Indiana.

SE	5	8	22	62	104	153	172	164	126	72	26	8

The above estimates of Growing Degree Days (GDD) Normals are derived from normal temperatures at mid-month and the corresponding GDD. Temperature and GDD relationship come from a computer run of 20 years (1949-1968) using Indianapolis data. For example, a weekly average temperature of 60° F. resulted in 84 GDD. The basic formula is: $1/2 (\text{max. T.} - 50) + 1/2 (\text{min T.} - 50) = \text{GDD for one day}$. The maximum temperature is not allowed to exceed 86 degrees F. Negative units are not accumulated.

CROP HIGHLIGHTS

Acres: Indiana's seven major field crops in 1988 totaled 11.7 million acres, up 4 percent from the 1987 planted acreage. Corn acreage for harvest was 7 percent above a year earlier, whereas soybean acreage decreased 3 percent from a year earlier. Wheat harvested acreage was up at 17 percent and all hay acreage was 29 percent above the 1987 level. Oat acreage for harvest was 21 percent below a year earlier, while rye acreage remained the same. Other crops showing harvested acreage changes were potatoes, down 16 percent, processing tomatoes, up 12 percent, and spearmint, up 8 percent. Peppermint acres for harvest increased 26 percent from last year.

Yields: The 1988 drought caused severe damage to most major crops. The 1988 Indiana corn for grain yield of 83 bushels per acre was 52 bushels below the 1987 acreage yield. Winter wheat yield per acre, at 50 bushels showed a decrease of 8 bushels per acre from the 1987

average yield. Soybeans averaged 27.5 bushels per acre, down 12.5 bushels from 1987. Oats decreased 27 bushels but rye increased 3 bushels per acre, respectively. All hay yield at 1.99 tons per acre compares with 3.08 tons harvested per acre in 1987.

Production: The 1988 production of major crops was below a year earlier except for winter wheat and rye. Corn production was down 34 percent because of the drastic decline in yield per acre. Oat production was 53 percent below last year, while tobacco was down 1 percent. Soybean production was down 34 percent but winter wheat production was up 1 percent. Rye increased 11 percent, while all hay production was down 17 percent. Other crops showing decreases were potatoes, down 40 percent, and peppermint, down 17 percent. Spearmint was down 42 percent. Apple production decreased 22 percent to 56 million pounds and peach production was down 40 percent to 4.5 million pounds.

Indiana's Rank in Crop Production Among States, 1988

THE 1988 CROP SEASON

The final production estimate of the 1988 season places Indiana's corn production at 415.0 million bushels, 34 percent below the 631.8 million produced in 1987. Corn acres harvested totaled 5.0 million, up 7 percent from 1987. The average yield was 83 bushels per acre, a 52 bushel decrease from 1987. Total value of the 1988 corn crop was \$1.10 billion, down 16 percent from the 1987 total of \$1.31 billion. The average price, at \$2.65 per bushel, was 57 cents above the 1987 average price of \$2.08.

Soybean production totaled 115.5 million bushels, down 34 percent from 1987. The average yield was 27.5 bushels per acre, a 12.5 bushel decrease from 1987. The harvested acreage of 4.2 million was down 3 percent from a year earlier. The value of the soybean crop was \$884 million, down 15 percent from 1987 with an average price of \$7.65. This was a \$1.71 per bushel increase in price from 1987.

Indiana's 1988 winter wheat crop amounted to 35.0 million bushels, up 1 percent from 1987. Harvested acreage totaled 700,000 acres, up 100,000 acres from 1987. Wheat yield was 50.0 bushels per acre, 8 bushels below 1987. The value of the crop was \$124.3 million, 47 percent above 1987. The average price per bushel was \$3.55 compared with \$2.43 a year earlier.

Hay production totaled 1.87 million tons, down 17 percent from 1987. The 940 thousand acres of hay harvested, including set aside land was 210 thousand more than a year earlier but the average yield of 1.99 tons per acre was down 1.09 tons per acre from 1987. Value of the hay crop was 220.4 million, 75 percent above the 1987 level. Average price per ton, at \$118.00 compared with \$56.00 a year earlier.

Tobacco production totaled 10.9 million pounds, down 1 percent from a year earlier. Harvested acreage of 5,500 was 2 percent above the 1987 level. Average price per pound, at \$1.599 was 5 cents above the 1987 price of \$1.549.

The 1988 apple harvest in Indiana totaled 56.0 million pounds, down 22 percent from

the 1987 crop. A total of 43.0 million pounds or 84 percent of utilized production were used for fresh market, while 8.0 million pounds were used in processed products. Indiana farmers received an average price of 17.6 cents per pound for their apples, 0.6 cents greater than the year before. The total value of the crop decreased 25 percent to \$9.0 million dollars.

Indiana's 1988 oat production was 3.0 million bushels, down 53 percent from last year. The yield was 40.0 bushels per acre, a 27 bushel decrease from 1987. Harvested acreage, at 75,000, was down 21 percent from last year. The average price per bushel, at \$2.85, increased \$1.27 from 1987.

The 1988 potato production in Indiana, at 756,000 cwt., was down 40 percent from 1987. The yield of 180 cwt. per acre was down 28 percent from the 250 cwt. in 1987. Total acres harvested, at 4,200 was down 800 acres from the previous year. Potato prices, at \$6.60 per cwt. increased from the 1987 price of \$5.00.

Indiana peppermint production of 194,000 pounds of oil was down 17 percent from a year earlier. Acres harvested totaled 7,200, up 26 percent from 1987. The average yield of 27 pounds per acre was 14 pounds less than a year ago. The average price per pound at \$27.20 was up \$13.70 from 1987.

Spearmint production totaled 80,000 pounds, a 42 percent decrease from 1987. Acreage harvested was 4,000, up 300 acres from the previous year. The average yield of 20 pounds per acre was down 17 pounds from 1987. The average price per pound, at \$16.90 was up \$4.00 from 1987.

Indiana's 1988 peach production totaled 4.5 million pounds, down 40 percent from the 1987 crop. Indiana farmers received an average price of 30.9 cents per pound for their peaches, 2.0 cents greater than a year earlier. The total value of the utilized crop decreased 36 percent to \$1.4 million.

Rye production totaled 330,000 bushels in 1988, up 11 percent from a year earlier.

FRUIT CROP SUMMARY

Indiana's total apple production of 56 million pounds for 1988 was down 22 percent from 1987. The price per pound was 20.0 cents, up 3.0 cents from the previous year. Total value of the 1988 apple crop came to \$10.2 million, down 14 percent from the record high set in 1987.

Peach production in Indiana in 1988 totaled 4.5 million pounds. This was down 40 percent from the 1987 crop. The price farmers received for peaches averaged 30.9 cents per pound. Total value of the 1988 peach crop came to \$1.4 million, down 36 percent from 1987.

1/ In orchards of 100 or more trees of bearing age.

2/ No significant commercial production because of winter freeze.

**Flowering and Bedding Plants Summary
Indiana's 1988 Production and Value**

Indiana's wholesale value of all flowers, foliage plants and bedding plants sold by commercial producers in 1988 and 1987 totaled \$30.9 and \$34.5 million respectively. The state's most valuable floriculture crop was hybrid tea roses with a value of sales amounting to \$8.1 million. Flowering bedding plants were second with sales at \$3.1 million. Potted poinsettias with sales of \$2.8 million were third followed by sweetheart roses at \$2.2 million, and potted geraniums at 1.9 million.

The number of commercial producers in Indiana continues to decline, a trend started in recent years. Value of sales decreased for sweetheart roses, flowering bedding plants, hybrid tea roses, standard chrysanthemums, potted geraniums, potted poinsettias and potted lilies. Varieties showing increases were pompon chrysanthemums and potted chrysanthemums.

All data summarized reflect information furnished by commercial floricultural producers. A commercial floricultural producer is defined as one who has \$10,000 or more in gross sales of cut flowers, flowering and foliage plants, bedding plants, or cultivated florists greens, and who produces one or more of the crops surveyed.

The "area used for production" is defined as the "gross" area used, including walkways and aisles. This includes that area used for growing floricultural crops under glass, plastic, cloth, lath, or outdoors. The area is counted only once if refilled several times with the same crop during the year, but if the area is refilled with different crops, it is reported under each crop grown.

LIVESTOCK SUMMARY

The total value of the four major species of livestock and poultry on Indiana farms January 1, 1989 (December 1, 1988 for swine and chickens) amounted to \$1.076 billion, up 1 percent from the \$1.064 billion a year earlier.

Cattle numbers were down 5 percent in 1988 and value per head at \$585 was \$80 above a year ago. Total cattle inventory value, at \$754.7 million, increased 10 percent from the \$686.8 million last year. Cows and heifers that have calved totaled 530,000 head, 5 percent fewer than a year earlier. Of this total, 350,000 were beef cows (down 5 percent) and 180,000 were milk cows (down 5 percent).

Hog and pig numbers (December 1, 1988), at 4.30 million, were 7 percent below a year ago. The average value per head decreased from \$72.50 in 1987 to \$64.50 in 1988. This lowered the total inventory value to \$277.4 million, 17 percent less

than a year ago. Indiana moved from third to fourth in the nation in the number of hogs on hand December 1.

Indiana sheep producers had 19 percent more sheep and lambs than a year earlier. Stock sheep totaled 86,000 head. Average value per head increased \$20.50 from a year ago to \$99.00. Total inventory value at \$9.4 million was 50 percent above the previous year.

Total chicken inventory, at 27.8 million birds, was down 4 percent from last year. With this inventory, Indiana ranked second in the nation for both total chickens and hens and pullets of laying age (22.0 million). The total value of the chicken inventory was \$34.8 million, down 8 percent from 1987. The value per bird decreased 5 cents from the previous year to \$1.25 as of December 1, 1988.

1/ Less than 500 milk cows, included in State total.
 2/ Less than 5 million pounds produced, included in State total.

HOGS AND PIGS

The total pig crop in 1988 was 1 percent smaller than in 1987. Sows farrowed in 1988 decreased 1 percent from last year while litter rate increased 1 percent to 7.75. An \$8.70 decrease in average price per hundredweight and a 9 percent increase in pounds marketed resulted in cash receipts of \$717 million, 10 percent lower than in 1987. Gross income (cash receipts plus value of home consumption) also decreased 10 percent from a year earlier.

CATTLE

The number of cattle and calves marketed in 1988 decreased 13 percent from a year earlier. The 1988 average price for cattle increased \$2.70 per cwt. to \$58.10. Calf prices for 1988 averaged \$78.40 per cwt. compared with \$68.90 in 1987. Cash receipts for 1988 totaled \$340 million, down 7 percent from the \$366 million a year earlier. Gross income (cash receipts plus value of home consumption) showed a 7 percent decrease from 1987 to 1988.

MILK

Dairy farmers produced 2.4 billion pounds of milk in 1988, unchanged from a year earlier and down 2 percent from the 1986 milk production. Total number of milk cows dropped to 186,000, 4 percent below 1987, but milk production per cow was 5 percent above a year earlier to a record high 12,941 pounds.

SHEEP

The number of sheep and lambs marketed in 1988 decreased 18 percent to 60,000 head. The total pounds of sheep and lambs marketed was 21 percent less than the 1987 level. Cash receipts totaled \$3.3 million, down 24 percent from 4.3 million in 1987. Gross income (cash receipts plus value of home consumption) totaled \$3.4 million in 1988 compared with \$4.6 million a year earlier. Sheep averaged \$24.20 per cwt. and lambs averaged \$60.60 per cwt. during 1988.

Lambs saved in 1988 remained unchanged from the previous year at 75,000 head. The number of ewes one year old and older on hand January 1, 1988 increased 19 percent from 1987. Lamb crop per 100 ewes one year old and older was 132 during 1988 compared with 119 a year earlier.

Wool production declined 2 percent in 1988 to a new record low of 558,000 pounds. Sheep and lambs shorn totaled 82,000 head. The average fleece weight was 6.8 pounds. Total value of shorn wool was \$346,000--up 27 percent from a year earlier. Wool averaged 62 cents per pound in 1988.

2/ Excludes interfarm sales.

3/ Includes receipts from marketings of farm slaughtered meat.

POULTRY

Total value of production from eggs was \$204.1 million in 1988, down 15 percent from a year earlier. The average number of layers at 21,435,000 was 3 percent less than in 1987, and the average rate of lay was up 2 percent to 263 eggs per layer, resulting in a 2 percent decrease in total egg production during 1988. The average price received by producers for eggs was 43.4 cents per dozen compared with 50.0 cents a year earlier.

FARM INCOME AND PRICES

Indiana farmers received \$4.1 billion in cash receipts from farm marketings in 1988, an 11 percent increase from 1987. Cash receipts from crops were up 29 percent from the previous year while receipts from livestock and livestock products were down 7 percent. Marketing of crops at \$2.4 billion, accounted for 58 percent of the total cash receipts in 1988 while livestock receipts, at \$1.7 billion, accounted for the remaining 42 percent. In the previous year crop receipts accounted for 49 percent and livestock 51 percent of total cash receipts.

Meat animals were the leading source of income for Indiana farmers in 1988 and amounted to \$1.06 billion. Soybeans were second at \$1.02 billion and corn was third at \$974 million. Poultry and eggs were the fourth leading contribution to farm income with \$391 million and dairy products fifth with \$291 million. These five commodity groups accounted for 91 percent of the 1988 cash receipts.

2/ Eastern Cornbelt region consists of Indiana, Illinois, and Ohio.

3/ Insufficient Data.

4/ January survey initiated in the Corbelt region in January 1989.

**Value of Agricultural Commodities Exported
Indiana 1985-1988 ^{1/}**

Fiscal Year	Wheat and Flour	Total Feed Grains ^{2/}	Soybeans and Products	Tobacco Unmanufactured	Fruit and Preparations	Vegetables and Preparations	Dairy Products
-Million Dollars-							
1985	77.9	665.2	424.8	9.6	1.7	8.1	6.7
1986	64.7	393.1	492.0	8.2	1.6	7.6	7.0
1987	43.4	361.4	466.3	8.8	.9	8.4	7.7
1988	39.5	517.0	617.2	8.8	2.2	11.6	7.5

Fiscal Year	Meats and Products	Hides and Skins	Poultry Products	Fats, Oils and Greases	Feeds and Fodders	Seeds	Other	Total
-Million Dollars-								
1985	11.3	7.5	25.2	3.9	21.8	6.0	27.7	1,297.4
1986	12.0	7.0	33.0	2.5	21.5	6.2	28.6	1,085.0
1987	12.9	7.2	37.1	2.0	24.5	6.3	28.6	1,015.5
1988	24.2	8.3	42.8	2.6	34.9	7.0	38.6	1,362.2

^{1/} The export shares are derived from contribution of Indiana to national output and sales. They do not show actual exports, but instead reflect the common stake of Indiana in the national export total.

^{2/} Includes barley, corn, oats, and sorghum grain.

**Number and Value of Livestock and Poultry on Farms
United States, January 1, 1985-1989**

January 1	All Cattle	Milk Cows <u>1/</u>	Hogs <u>2/</u>	All Sheep and Lambs	Chickens <u>2/</u>

1986	92.7	74.9	17.9	2.7	241.6
1987 4/	96.0	76.2	19.8	2.7	243.8

1/ Includes the farmworker. Thus in 1945, the average farmworker supplied himself and 13.6 other persons.

2/ Includes farm operators, unpaid family workers, and hired workers.

3/ Includes persons in our military forces in this country and abroad.

4/ Preliminary.

"WHY AGRICULTURAL STATISTICS?"

A persons's judgement is no better than his or her facts, and these statistics are basic facts of Agriculture.

They provide an accurate, unbiased picture of Indiana's agriculture. The facts on present and prospective supplies furnish a sound basis of judgement and action by farmers, ranchers, other individuals, the business community, transportation companies, crop and livestock interests, and governmental agencies.

They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased official agriculture reports reduce uncertainty which limits speculation.

They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no official reports.

They give producers the same foresight to future price trends that organized dealers possess.

They aid farmers and ranchers in planning their production and marketing.

They are essential in enacting wise legislation affecting Agriculture.

They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.

They are the basis of analysis of agriculture and other business conditions.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processors, and other marketing outlets.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They give information about supplies of agricultural products to anyone trying to develop new markets for these products.

They indicate potential buying power thereby enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than with uncertain demand.
