

# Maryland Crop Quick Facts 2003 Crop

Hurricane Isabel blew into town on September 17, 2003 leaving minimal damage to crops, livestock and farm buildings. Some corn fields have tassels snapped off just before the ear and lodging is prevalent. Soybeans appear unaffected by the storm. Farmers are taking assessments of any damage caused by Hurricane Isabel and beginning corn for grain harvest in earnest.

Harvest has started, but harvest pace will be slower this year due to lodging. Corn harvest was delayed this year due to a lack of sunlight and wet, soggy weather conditions. According to the Weekly Crop and Weather Report on September 29, 2003, 20 percent of the crop has been harvested for grain, 43 percent behind last year and 20 percent behind the five-year average. Corn silage harvest is 58 percent harvested, 37 percent behind last year and 23 percent behind the five-year average. As of September 29, 2003, corn was rated 14 percent excellent, 36 percent good, 23 percent fair, 17 percent poor and 10 percent very poor.

Soybean growth and development has been slow this year due to rain and cloudy skies. As of September 29, 2003, 33 percent of soybeans have turned color and 7 percent are dropping leaves. Soybeans are turning color and

beginning to drop their leaves. Harvest of full-season beans should begin in late October. Soybeans are rated 18 percent excellent, 32 percent good, 25 percent fair, 18 percent poor and 7 percent very poor.

Tobacco yield is expected to be similar to last year at 1,400 pounds. As of September 29, 2003, 80 percent of the tobacco crop has been harvested.

Small grains are beginning to be planted for next year. Some fields are currently being planted to barley. Planting of wheat has not begun yet and will be delayed due to the late soybean harvest.

Fourth cutting of hay for other and alfalfa hay is currently underway. As of September 29, 2003, 30 percent of alfalfa hay has finished the fourth cutting and 26 percent of other hay has finished the fourth cutting.

## Corn

- Fewest planted acres since 2000.
- Highest yield since 2001.
