

The Ginseng Regulatory Program's goal is to protect ginseng, *Panax quinquefolius*, from becoming a threatened species. The program accomplishes this by: registering growers and dealers, certifying cultivated dry root and seed as originating in Wisconsin, inspecting and surveying gardens during the growing season, monitoring pests and diseases, and inspecting records of growers and dealers for accuracy.

Wisconsin's 840 growers reported selling 420,656 pounds of dry roots for export. The 23 dealers, 19 of which are Wisconsin dealers, exported 522,425 pounds of dry roots. Exports from Wisconsin primarily go to Hong Kong. Sales seasons may continue over a two-year period. Sales volumes in spring vary considerably between years.
