and Central Corn Belt, larger total acreages of land and of cropland harvested are in cash-grain farms than in livestock farms. In the Northern, Western, and Southern Corn Belt, livestock farms include a larger total area and have more of the cropland than do cash-grain farms. There is more land used only for pasture in the Southern Corn Belt than in any of the other regions. The Western Corn Belt has the largest acreage of cropland not harvested and not pastured as well as the largest acreage of pasture that is neither cropland nor woodland.

The percentage of farms reporting land in specified uses in 1954 in the Corn Belt and component regions is shown in table 24. All cash-grain farms reported cropland harvested. The percent of livestock farms reporting cropland harvested was greatest in the Northern Corn Belt. Woodland pastured was reported by a larger percentage of the commercial farms in the Eastern Corn Belt than in any other region. From 77.6 to 97.6 percent of the farms in the various groups had pasture of some kind.

Table 25.—Average Acreage Per Farm Reporting: All Land in Farms and Farmland in Specified Uses, on Commercial Farms in the Corn Belt and Component Regions: 1954
