In 2017, the United States had 908,274 producers who identified as beginning farmers. A beginning farmer is anyone who has farmed for 10 years or less. They accounted for 27% of the country’s 3.4 million producers. States with the largest share of beginning farmers are mostly on the East and West coasts. The average age of a beginning farmer is 46.3, much younger than the average age of all farmers (57.5). In fact, 26% of beginning farmers are under 35, while farmers under 35 represent only 8% of all U.S. farmers.

Number and Location

The 2017 Census of Agriculture collected demographic data differently from previous censuses to better capture the contributions of all persons involved in agricultural production. In response to detailed questions about farm decision making, more farms reported multiple individuals involved in farm operations.

As a result of the new approach to counting producers, the total number of U.S. producers increased 7% between 2012 and 2017. The number of producers on their current farm for less than 10 years increased by 17% since the last census, though all of the increase occurred among producers with less than five years on their current farm.

States along the East and West coasts have a high share of farms with beginning producers compared to farms in the Midwest. In Alaska, 46% of producers are new and beginning farmers. Overall, 597,337 farms (29% of U.S. farms) have a beginning producer.

Just as Texas is the state with the most farms and the most producers, Texas leads in the number of beginning farmers with 118,999, which is 13% of all beginning producers in the United States.

Producer Characteristics

Beginning producers are more likely to be female than producers overall; 41% of beginning producers are female compared to 36% of all U.S. producers. Almost three-quarters (72%) of beginning farmers report a primary occupation other than farming (compared to 58% of all U.S. producers), and the majority (53%) work off the farm 200 days more.

Farm Characteristics

Farms with at least one beginning producer sold $88 billion in agricultural production in 2017, with 45% ($40 billion) in crop sales and 55% ($48 billion) in the sales of livestock, poultry, and livestock and poultry products. These farms accounted for 23% of total U.S. agriculture sales. They received $1.7 billion in government payments in 2017.

Eighteen percent of farms with a beginning producer had sales and government payments of more than $50,000 per year compared to 25% of all U.S. farms. Farms with a beginning producer were more likely to produce less than $10,000 in sales and government payments (64%) compared to all U.S. farms (55%).

Farms and Land

Farms with beginning producers accounted for 193 million acres of land, 21% of the U.S. total. The majority of farms with beginning producers (52%) were less than 50 acres in size. The average size of farms with a beginning producer is 324 acres, compared to 441 acres for all U.S. farms.

Farm Specialization

Farms with a beginning producer are mostly similar to all U.S. farms in terms of specialization. Farms with a beginning producer are less likely to specialize in oilseed and grain production (12%) compared to all U.S. farms (16%), and more likely to specialize in specialty crops (12% compared to 9% nationally).

About the Census

The Census of Agriculture, conducted once every five years, is a complete count of U.S. farms and ranches and the people who operate them. Results from the 2017 and earlier censuses are available at national, state, and county levels.

See the searchable database Quick Stats, the new Census Data Query Tool, downloadable PDF reports, maps, and a variety of topic-specific products including profiles by race, ethnicity, and sex.
