## NEBRASKA CROP PRODUCTION REPORT

LINCOLN, NE, June 12, 2013 -- Based on June 1 conditions, Nebraska's 2013 **winter wheat** crop is forecast at 45.5 million bushels, up 6 percent from the May 1 forecast but down 15 percent from last year's crop and the smallest production since 1944, according to the USDA's National Agricultural Statistics Service, Nebraska Field Office. Average yield is forecast at 35 bushels per acre, up 2 bushels from last month but down 6 bushels from last year and the lowest since 2002.

Acreage to be harvested for grain is estimated at 1.3 million acres, unchanged from May 1 and unchanged from last year. This would be 90 percent of the planted acres, below last year's harvested percent and the smallest percentage since 2004.
