Donald M. Bay, Administrator

ALABAMA
DEPARTMENT OF AGRICULTURE
AND INDUSTRIES

Jack Thompson, Commissioner

The National Agricultural Association of State Departments of Agriculture (NASDA) is a nonprofit, nonpolitical organization comprised of the 50 State Departments of Agriculture. NASDA and USDA-NASS have a cooperative agreement for NASDA to employ enumerators in the collection of agricultural statistics. Following is a list of Alabama's NASDA enumerators (as of January 1, 1995). Without their help, the presentation of statistics in this bulletin would not be possible. The Alabama Agricultural Statistics Service gratefully acknowledges the work and integrity of it's NASDA enumerators.

FIELD ENUMERATORS

(and home county)

Myriam Allen - Baldwin
Huston Bolton -Cherokee
Sarah Castile - Lauderdale
Billy C. Davis - Butler
Mary Francis Davis - Butler
John Erzen, Jr. - Clarke
James Estes - Dale
S.I. Harry - Elmore
Charlie Huddleston - Cullman
Alton Jenkins - Clay
Irene Kaiser - Baldwin
Ottis Polk - Wilcox
Doris Prince - Franklin
Beth Reid - Madison
Raymond Schnell - Marengo
William Slagle - Chambers
Ralph Thompson - Baldwin
W. Thompson - Tallapoosa
James Tucker - Fayette
Peggy Waters - Houston
Harold Wilkins - Pickens
Ruth Williamson - Marshall
Louise Wilson - St. Clair

The purpose of agricultural statistics is to provide information that will be helpful in making sound production, marketing and investment decisions. This edition of The Alabama Agricultural Statistics Bulletin gives the present as well as the past status of Alabama agriculture. Decisions based on these statistics can effect all producers and consumers in our state. I hope you will find it very useful.

This edition spotlights the cotton industry that has made tremendous growth in acreage and production. It has again become our largest row crop in terms of acreage and income. Alabama now ranks 10th in the nation in cotton production. I salute the cotton industry and see only a bright future for this crop.

Thanks to each person in the agricultural industry that has contributed to making agriculture the largest industry in the state. My department is committed to keeping Alabama agriculture growing and becoming even greater in the future.

Jack Thompson
Commissioner

Agriculture provides a firm foundation for economic growth in Alabama. To capitalize on the benefits of agricultural production, it is imperative that timely and reliable information be available. Decisions which effect agriculture will ultimately be directed back to production, what, where and how much of a commodity is being produced? The Alabama Department of Agriculture and Industries and Alabama Agricultural Statistics Service are pleased to provide this bulletin which addresses these question and summarizes 1994 Alabama agricultural production.

We wish to acknowledge the Alabama farmers who make this publication possible. Their cooperative spirit extends to the Agribusness community, the Extension Service and other USDA agencies who also provide information included in this bulletin. A special thanks to Alabama Farmers Federation, Cotton Division for providing the front cover.

The Alabama Agricultural Statistics Service staff is dedicated to serving you. Contact us anytime with your comments, questions and requests for information.

Weather Summary

Precipitation:
1994 was a mild and wet year across Alabama. A combination of a couple of tropical storms and persistent clouds and rain in the middle of summer helped to keep summertime maximum temperatures cooler than normal. Winter was mild as well with only a few cold spells. Two of the more notable weather events in 1994 included the Palm Sunday tornado outbreak in the northeast and flooding from Tropical Storm Alberto. Unfortunately, these events caused the loss of human life and significant property damage.

A combination of Tropical Storm Alberto, Tropical Storm Beryl and a persistent cloudy and rainy pattern produced yearly precipitation totals that reached up to 21 inches above normal. Alberto's slow track through and then back across the southeast and eastern sections produced significant flooding in the south. However, west central and coastal areas actually were one to eight inches below normal for the year. Totals for the year ranged from near 50 inches in west central and coastal sections to near 80 inches in the northeast and south central sections. The total number of rain days were fairly uniform across the state and ranged from 100 to around 140 days.

Temperatures:
For the year, average temperatures were within two degrees of normal with much of central Alabama averaging around two degrees above normal. Winter was milder than normal across most of the state with only a few cold outbreaks. The coldest period occurred in mid January when all stations recorded their extreme lows for the year. Lows ranged from near 0 in the northeast, to the single digits north, teens south, and near 20 along the coast. Other cold spells were not as strong and were fairly brief. The number of days that the temperature dropped to freezing or below ranged from near 16 days in the southeast and coast to near 80 days in the northeast and cooler locations in the northwest. The number of days that the temperature fell to 28 or lower ranged from around 5 days in the southeast and coast to near 55 days in the northwest and northeast. As for the summertime maximums, 1994 was the first year in several years that the temperatures failed to reach the 100 degree mark anywhere in the state. This was mainly because of the persistent clouds and rain during the warmest months. Extremes for the year ranged from near 90 in the northeast to the mid 90's in south central sections. Some stations in the northeast reached 90 degrees fewer than 5 days for the entire year. South central areas recorded about 80 days at or above 90 degrees for the highest frequency in the state.

Crops Review

BY

MARK E. HUDSON

Total Acreage of Principal Crops Up: Harvested acres of corn, soybeans, hay, peanuts, and cotton totaled 1,982,000 acres for the 1994 season. This compares with 1,934,000 acres the previous year and 1,944,000 in 1992. More acres were devoted to cotton and hay while soybean, corn, and peanut acreage declined.

Record Yields Set: A new corn for grain yield record was set at 96 bushels per acre compared with the 1993 crop of 55. This broke the old record of 94 bushels set in 1992. Soybean yield, at 31 bushels per acre, exceeded the old record set in 1992 of 29 bushels. Previous year's soybean yield was 24 bushels. Peanut yield was 2,010 pounds compared with 1,980 a year earlier. Cotton yielded 766 pounds of lint per acre compared with 524 pounds in 1993. Yields for most other crops produced in Alabama also showed an increase.

Early Crop Season Progress: Wet ground limited field work across the State in January and February. On March 27, deadly tornadoes in north Alabama caused varying amounts of damage to fences, crops, and farm structures. Soil moisture ratings were mostly adequate to surplus through early May. Warmer, dryer weather returned speeding up the planting pace. Soil moisture ratings remained mostly adequate during June. Tropical storm Alberto dumped heavy rains in the wiregrass region. Water covered some peanut and cotton fields hindering plant development. Surplus soil moisture ratings were prevalent through mid-August causing fieldwork to be behind normal. Wet conditions made disease and insect control difficult in most peach orchards.

Late Crop Season Progress: Farmers took advantage of clear weather to harvest hay and cultivate fields in late August and September. Made to order rains in September and October helped small grain germination and boosted row crop production. Clear weather prevailed during mid-October providing excellent harvest conditions. Pecan production was down from last year due to low bloom counts and poor nut fill. Summer Irish potato production rose by 87 percent due to favorable growing conditions. Cotton lint outturn was aided by cooler weather with light insect pressure during the growing season. Row crop harvest wrapped up with few delays due to dry clear weather in late fall. Much needed rain fell on late seeded wheat fields providing moisture for seed germination and plant development during December.

Five Leading Crops: Progress For 1994

Crop	Planting Began	Planting Ended	Harvest Began	Harvest Ended
Corn	Mid March	Late May	Late July	Late November
Cotton	Early April	Mid June	Mid September	Mid December
Peanuts	Mid April	Mid June	Late August	Early November
Soybeans	Late April	Early July	Late September	Mid December
Hay, first cutting			Early May	Early August

1/ State Totals for growers and covered area of production include commercial growers with $10,000 or more in sales. Data for specified crops and value of sales include only commercial growers with $100,000 or more in sales.

2/ Data not collected separately in 1993. Commodities are included in other flowering and foliar flats.

* Not published to avoid disclosure of individual operations.

Livestock Review

BY

RICK GEESEY

Cattle and Calves: Total cattle and calves on Alabama farms was 1.78 million on January 1, 1995, up 7 percent from 1994. Beef cow inventory was up 8 percent at 934,000 head. Beef cow replacement heifers, at 161,000 head, were up 13 percent from the previous year. The estimated 36,000 milk cows were down 5 percent from a year earlier. Milk replacement heifer inventory increased 8 percent. Other heifers, at 40,000 head, compared with 44,000 in 1994. Bulls increased from 59,000 to 60,000. Steers dropped from 82,000 head in 1994 to 75,000 head in 1995. The inventory of calves in Alabama totaled 460,000, a 10 percent increase from January 1, 1994. Cash receipts from farm marketings during 1994 totaled $311.6 million, down 10 percent from the previous year. The number of cattle and calves marketed during 1994 was only 1 percent less than 1995. Prices received for cattle and calves were down $6.00 and $10.30 per hundredweight respectively.

Hogs and Pigs: All hogs and pigs on hand December 1, 1994, was 280,000 head, a decrease of 12 percent from 1993. The number of breeding hogs at 35,000 and total market hogs at 245,000 were down 12 percent from 1993. Fifty-four thousand sows farrowed 416,000 pigs in 1994, 16 percent less than a year earlier. The average number of pigs per litter was 7.7 compared with 7.8 in 1993. Cash receipts from pork were $65.0 million and the average price received per cwt was $35.80.

Milk Production: Dairymen in the State produced 500 million pounds of milk on their farms in 1994, 3 percent less than the previous year. Milk per cow averaged 13,514 pounds, an increase of 309 pounds from last year. Prices received increased 50 cents per hundredweight from $14.20 in 1993 to $14.70 per cwt in 1994. Alabama cash receipts from milk sales in 1994 was slightly higher than 1993 sales at $72.9 million.

Catfish: There were 250 operations in the State producing catfish on January 1, 1995. Water surface area used for catfish production was 17,900 acres, up 5 percent from the preceding year. Sales of catfish in Alabama totaled $41.1 million, increasing 2 percent from $40.1 million during 1993. The average price received for foodsize catfish was 74 cents per pound, an increase of 6 cents from the previous year.

Sheep and Lambs: Sheep and lamb inventory on January 1, 1995, amounted to 7,000 head, a 36 percent drop from January 1994. Ewes, at 4,600 head, plunged downward by 40 percent and rams at 300 head decreased from 700 head in 1994. Replacement lamb numbers were 33 percent less than the previous year. The 1994 cash receipts for sheep and lambs totaled $203,000 down 23 percent from 1993. Total pounds marketed for sheep and lambs were up 13 percent, the average prices received per hundredweight were down $3.00 for sheep and $4.00 for lambs.

Poultry Review

BY

GAIL GREGORY

Broiler Production and Value: Alabama broiler producers marketed 909.6 million birds during the 1994 marketing year, an increase of 3 percent from 1993. Cullman County was the leading broiler producer, followed by DeKalb, Marshall, Coffee, and Blount counties. Cash receipts amounted to $1.44 billion up 7 percent from the previous year. Alabama ranked third in broiler production behind Arkansas and Georgia.

Layer and Eggs: During 1994, Alabama's laying flocks produced 2,732 million eggs, up 8 percent from the previous year. There were 11.4 million Layers 20 weeks and older on hand December 1, 1994 compared with 11.2 million in 1993. Cullman County had the largest inventory, followed by Marshall, DeKalb, Blount, and Randolph counties. Cash receipts from eggs were $205.4 million down 6 percent from 1993. Alabama ranked 10th nationally in egg production.

Broiler Hatchery Production: Commercial broiler hatcheries in Alabama hatched 1.06 billion chicks in 1994, up 2 percent from the previous year. Alabama hatcheries shipped 128.3 million broiler-type chicks to other states, including 46.4 million to Mississippi and 41.9 million to Georgia. Chicks shipped into Alabama were 37.5 million, an increase of 5.1 million from 1993. Egg-type hatchery data are not published to avoid disclosing individual operations.

1/ Estimates are for market eggs not all eggs.

Prices Received by Farmers: Represent marketing year average prices received at the point of first sale for all grades and qualities of the commodity sold. Points of first sale range from bulk sales at the farm to packed and graded products delivered to a local market. For crops, the price refers to all sales during the year, regardless of the year harvested. The average price would result from dividing the total dollars received by all farmers, before any marketing charges are deducted, by the total quantity sold. Contract sales are reported in the month of settlement, not when agreements are made. Transactions are finalized when delivery and payment are completed. Prices are on an "as sold" basis, with the following exception: milk is priced free on board (f.o.b.) plant or receiving station. Monthly prices are based on all sales of the commodity during the entire month. Exceptions are hay, eggs, and turkeys, which are based on a five day period centered on the 15th of the month. Marketing Year Average Prices are weighted average prices for crops, livestock and poultry items sold during the marketing year.

Prices Paid by Farmers: The number of production items used on farms is so extensive that it is not feasible to collect price data for all inputs. Therefore, about 180 selected items are priced to represent groups of similar items in the major production expenditure categories. Prices paid by Alabama farmers are represented in the Agency's prices paid surveys, but no individual State estimates are published. Average prices for the surveyed production input items are a component of the Index of Prices Paid by Farmers. This index, calculated on the 1910-14 base, is called the Parity Index and is required by law.

Cash Receipts Review

BY

PAUL WILLIAMS

Farm Cash Receipts: Cash receipts from farm marketings increased 2 percent from $2,857 million in 1993 to $2,905 million for 1994. Livestock and poultry products, valued at $2,159 million, accounted for almost 75 percent of the total. Crops (including nursery and greenhouse products), totaled $746 million to make up the remaining 25 percent. Also, non-farm commercial timber receipts increased 25 percent from $523 million in 1993 to $652 million. Total farm and forestry receipts (including government payments and other farm income) increased 6 percent from $3,843 million in 1993 to $4,011 million.

Alabama poultry and poultry products accounted for 57 percent of the state's total receipts. Cattle and calves ranked second with 1 percent. Cotton was third followed by greenhouse, sod and nursery products and peanuts. Sales from these 5 enterprises were each over $100 million. Together they made up almost 90 percent of the total cash receipts from farm marketings.

Receipts from the state's broilers totaled $1,444 million in 1994, up $94 million from the 1993 total of $1,350 million. Cattle and calf returns totaled $312 million, down $34 million from the 1993 total of $346 million. Receipts from most crops produced in the state were up from the previous year with the exception of pecans, peaches and greenhouse, sod and nursery crops.

Cash Receipts Tables: Cash receipts for counties with limited production are included in district totals.

Definitions: The definitions below will be helpful in interpreting the information on the following pages.

Cash Receipts: Estimates of the value of all agricultural commodities marketed or removed from the farm where produced during the calendar year. Sales were from open-market channels, placement of commodities under CCC loan, any gain (excess of market value over CCC contract value) on commodities reclaimed from CCC and any other removals. Cash receipts include sales of commodities regardless of the year produced. Cash receipts do not include non-monetary transactions such as on-farm use of agricultural commodities.

Government Payments: Includes both cash payments for feed grain, wheat, cotton, wool, amount paid under agricultural and conservation programs, miscellaneous payments under programs such as Rural Clean Water and Disaster, as well as payment-in-kind (PIK). The Agricultural Stabilization and Conservation Service (ASCS) supplied the information.

Farm Forest Products: Stumpage revenue from sales of forest products from farms. These receipts are considered Other Farm Income. These data and non-farm timber sales by county were provided by the Alabama Forestry Commission.

Non-farm Commercial Timber: Stumpage revenue from sales of forest products taken from other private, forest industry and government owned lands.

Other Farm Income: Includes machine hire and custom work, forest product sales, custom feeding fees, and other farm business-related income. In the county tables these receipts are not published separately for each county, but are included in district totals.

Value of Production: Crop value is derived by multiplying production by the estimated season average price received by farmers. Value of production for livestock and poultry reflects value of the number of head on the inventory date. It is derived by multiplying the number of head by an estimated value per head as of that date.

Cash Receipts by Commodities, 1970-1994 1/
