USDA to Survey Arkansas Farm Chemical Use and Production Costs

Little Rock, Arkansas - The U.S. Department of Agriculture's National Agricultural Statistics Service (NASS) will gather information about farm economics and production practices from soybean producers across Arkansas, as part of the 2020 Agricultural Resource Management Survey (ARMS).

The ARMS survey is conducted in three phases from May 2020 through April 2021. In this current phase, NASS will collect information on production practices and chemical use for the specific commodity mentioned above. In the final phase, NASS will survey producers on cost of production, farm income, and production expenditures.

"ARMS is a vital survey that tracks how Arkansas farms use technology to manage production of their major field crops," said Eugene Young, Director of the NASS Delta Regional Field Office. "The survey helps policymakers and farm groups understand the factors driving costs of production and returns from crop production."

NASS enumerators will conduct the survey over the phone starting in October and recommend farmers have their fertilizer and pesticide spray records available to speed up the survey process.

All data provided by farmers is confidential and protected by law. NASS further safeguards the privacy of all respondents by publishing only aggregate data, ensuring that no individual operation or producer can be identified.

ARMS is a joint effort of NASS and USDA's Economic Research Service. For more information about the 2020 Agricultural Resource Management Survey, please visit www.nass.usda.gov/go/arms.

Survey results and all NASS reports are available online at www.nass.usda.gov/Publications. For more information call the NASS Delta Regional Field Office at (800) 327-2970.

###

NASS is the federal statistical agency responsible for producing official data about U.S. agriculture and is committed to providing timely, accurate and useful statistics in service to U.S. agriculture.

USDA is an equal opportunity provider, employer, and lender.
