USDA TO SURVEY FARMERS’ PLANTING INTENTIONS FOR 2022

Little Rock, AR – As the 2022 crop production season begins, the U.S. Department of Agriculture’s National Agricultural Statistics Service (NASS) will contact approximately 1,900 Arkansas producers to determine their plans for the upcoming growing season.

“Each year, the agriculture industry eagerly awaits USDA’s Prospective Plantings report, which provides the first survey-based estimates of U.S. farmers’ planting intentions for the year,” said NASS’ Delta Regional Director Eugene Young. “The March Agricultural Survey provides the factual data that underpins these projections, making it one of the most important surveys we conduct each year.”

NASS will mail the survey questionnaire in February, asking producers to provide information about the types of crops they intend to plant in 2022, how many acres they intend to plant, and the amounts of grain and oilseed they store on their farms. NASS encourages producers to respond online or by mail. Those producers who do not respond by February 26 may be contacted for a telephone interview by a National Association of State Departments of Agriculture (NASDA) enumerator.

In accordance with federal law, NASS keeps responses confidential and publishes data in aggregate form only, ensuring that no individual operation or producer can be identified. Survey results will be published in the Prospective Plantings and quarterly Grain Stocks and Rice Stocks reports to be released on March 31, 2022. These and all NASS reports are available online at www.nass.usda.gov/Publications. For more information, call the NASS Delta Regional Field Office at (800) 327-2970.
