

Agriculture Statistical Review

Overview

When people think of California, they generally think of Disneyland, Hollywood, the Beach Boys, beautiful weather, earthquakes, traffic problems, and millions of people, but seldom do they think of agriculture. Think again. The Golden State is also home to the largest food and agricultural economy in the nation. No other state even comes close. California's farmers and ranchers have made this state the leader in agricultural production for more than 50 years.

Got milk? You better believe we do. California produces one out of every five glasses of milk in the nation. The dairy industry continues to grow at an astonishing rate with milk production jumping 6 percent from 2000 to 2001. California also has some of the largest dairies in the country with more than 700 cows on an average dairy, while the United States average is less than 100. In 2001, the average milk production per cow in California was 21,149 pounds, 16 percent higher than the national average.

And no, you didn't just hear it through the grapevine. California produces most of the grapes grown in the United States. Are you ready to toast your friends with a glass of wine? Chances are it was produced by one of the approximately 1,200 wineries in the state. Warm days and cool nights are very conducive to growing grapes, and California now produces some of the best wines in the world. In 2001, 91 percent of all grapes (raisin, table and wine) produced came from right here in the Golden State.

Are you hungry for a fruit, nut, or vegetable? Flip a coin. Since the state grows more than half of the nation's fruits, nuts, and vegetables, there's a fifty-fifty chance it's from California. Oh, and don't forget artichokes, brussels sprouts, almonds, dates, figs, kiwifruit, nectarines, olives, pistachios, dried plums (prunes), and walnuts – they will be hard to find growing in any other state. Don't worry though; these are easy to find in your grocery store with a proud label indicating they're California grown.

And California agriculture is more than just food. Golden State farmers also contribute to the creation of products related to manufacturing, health care, printing, education, recreation, transportation, construction, entertainment, and personal care. There's everything from detergents, x-ray film, antibodies, paper, shampoo, toothpaste, footballs, shoes, flowers, tires and antifreeze to baseball bats.

The Golden State is, by far, the number-one agricultural producer and exporter in the United States. In fact, last year the agricultural marketings reached \$27.6 billion. And for those in Texas, who like to talk big, California's total represents more agriculture than Texas and Iowa combined – the second and third leading agricultural states in the nation.

So, if it's breakfast, lunch, dinner, or almost anything else, remember it was probably grown right here in California.

California's Gross Cash Income for 2001

Agricultural production and gross cash income in 2001 increased to \$27.6 billion, 1 percent higher than the previous year, but fractionally less than the record income set in 1997. Cash receipts from farm marketings totaled \$26.1 billion, up 2 percent from 2000, while other farm related income totaled \$1.43 billion.

Fruit and nut cash receipts, at \$7.14 billion, were 2 percent below last year and comprised 26 percent of the total. Vegetable receipts declined 6 percent, from \$6.54 billion in 2000 to \$6.13 billion in 2001, and comprised 22 percent of the total. Livestock and poultry jumped 18 percent and comprised 27 percent of the total. Nursery, greenhouse and floriculture crops, with 11 percent of the total, were down 3 percent from last year. Field crops accounted for 9 percent of the total, while their cash receipts increased 2 percent from the previous year.

The Golden State's two leading commodities in cash receipts are milk with \$4.63 billion and grapes with \$2.65 billion. Nationally, California has about 20 percent of the total milk receipts and 91 percent of the grape receipts.

NOTABLE INCREASES IN MARKETINGS:

Carrots	35%
Cotton, Pima	72%
Hay, Alfalfa	33%
Hay, Other	32%
Milk & Cream	25%
Nectarines	20%
Olives	159%
Oranges, Navels	37%
Oranges, Valencia	142%
Pears, Bartletts	26%
Corn, Sweet	26%
Potatoes, Sweet	23%

SIGNIFICANT DECREASES IN MARKETINGS:

Boysenberries	25%
Broccoli	24%
Celery	20%
Chickens (Excluding broilers.)	80%
Corn for Grain	20%
Cotton, Upland	33%
Hogs and Pigs	22%
Lettuce, Leaf	22%
Oats	49%
Pears, Other	28%
Pecans	42%
Pistachios	35%
Plums	24%
Plums, Dried (Prunes)	35%
Rice	36%
Sugar Beets	49%
Tomatoes, Fresh	22%

California Farm Facts

California has 88,000 farms, which constitute about 4 percent of the nation's total farms. However, these farms account for 13 percent of the national gross cash receipts from farming. The land in farms totaled 27.7 million acres in 2001 with the average size being 315 acres. Some 350 crops are recognized in California, including seeds, flowers and ornamentals.

This directory contains information on roughly 77 major crops grown on a large commercial scale in California:

- * 14 field crops
- * 30 fruits and nuts
- * 33 vegetables and melons
- * Nursery products and cut flowers

In addition, data are shown for 10 livestock, poultry and other products.

California's Top 20 Commodities

California's top 20 crop and livestock commodities account for 74 percent of the state's gross farm income. Many of these top commodities are specialty crops for which the Golden State accounts for most of the U.S. production. Milk and cream production remained number one in 2001, followed by grapes and nursery products.

Leading Counties

California has some of the most agriculturally productive counties in the country. According to the 1997 Census of Agriculture's ranking of market value of agricultural products sold, eight of the nation's top ten producing counties are in California.

Tulare grabbed the number one spot from Fresno as the leading county in the nation and in 2001 reaching \$3.49 billion in agricultural value. A large share of Tulare's receipts is from milk and cream, which showed a big jump in 2001. If ranked separately, the value of agricultural commodities in Tulare County would rank it ahead of over half the states in cash receipts.

Weather Highlights for 2001

In California, the 2001 season started with cooler-than-normal temperatures and below average precipitation in January. The relatively dry month allowed growers to perform the needed orchard and vineyard activities and prepare the ground for planting the new crops. The cold temperatures provided sufficient chilling for a good dormancy, which is important for many non-citrus crops. Large scale weather patterns changed significantly in February as a series of Pacific storms

moved into the State, helping to bring precipitation totals closer to normal. The cool, wet weather delayed many cultural activities such as pruning, planting, spraying, and ground preparation. The almonds began blooming in late February and reached full-bloom by early March. Bee colonies were placed in almond orchards for pollination, but the cool, wet weather often hampered bee activity. Stone fruit blossom began in early March and warm weather following in March and April accelerated crop progress. Some frost damage was reported in Napa, Sonoma, Mendocino and Lake counties in early April. Grapes and stone fruit in Fresno and Madera counties also suffered damage from frost and hail, but overall damage was minor. Record high temperatures in May accelerated tree fruit maturity and picking of many fruit crops began. Development of most fruit and nut crops was about normal throughout the remainder of the growing season, with fairly mild weather in July and August. Generally speaking, most fruit crops had good quality fruit. The mild weather during growing and harvesting seasons allowed growers to produce a crop with few problems.

The month of January failed to bring the expected precipitation and with cooler-than-normal temperatures slowed winter vegetable crop development and delayed harvest. Weather patterns changed significantly in February when a series of Pacific storms moved into the State and, although moisture was badly needed, it slowed crop development, interrupted winter harvesting and delaying planting of summer crops. However, warm weather in late March and April allowed crops to be planted and to progress normally. The remainder of the vegetable growing season was uneventful and planting and harvesting proceeded on schedule.

Cotton was planted on schedule, but rainfall and cool temperatures during April forced some replanting. A number of growers switched from Upland to American Pima cotton because of poor prices for Upland. Most other field crops progressed normally throughout the year, with only occasional problems developing. Insect pressure was generally light and good summer and fall weather allowed harvest to progress on schedule.

California's Top 20 Commodities for 2001

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales. Note: Changes have been made to row labels, but the underlying conceptual measures are unchanged.

4/ California share of U.S. production is less than one-half percent.

California's Farm Numbers and Size, 1950-01

Year 1/	Number of Farms	Land in Farms	Average Size of Farm
		1,000 Acres	Acres
1950	144,000	37,500	260
1955	124,000	39,000	316
1960	108,000	38,800	359
1965	82,000	37,800	461
1970	64,000	36,600	572
1975	73,000	34,300	470
1980	81,000	33,800	417
1985	79,000	32,900	416
1990	85,000	30,800	362
1991	83,000	30,500	367
1992	82,000	30,200	368
1993	85,000	29,900	352
1994	85,000	29,600	348
1995	86,000	29,300	341
1996	86,000	29,000	337
1997	87,000	28,700	330
1998	89,000	28,500	320
1999	89,000	27,800	312
2000	87,500	27,800	318
2001	88,000	27,700	315

1/ Until 1950 the definition of a farm was: Places of 10 or more acres that had annual sales of agricultural products of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more. Starting in 1975 the new definition of a farm is: Places with annual sales of agricultural products of \$1,000 or more.

County Rank, Total Value of Production and Leading Commodities, 2001 1/

Rank		County	Total Value	Leading Commodities

California Field Crops

California's 2001 field crop production was worth \$3.06 billion at the farm-gate level. The value was 2 percent higher than the previous year.

The average value per harvested acre increased from \$592 in 2000 to \$639 in 2001. Production of the major field crops in California was 26.0 million tons, down 9 percent from 28.5 million tons in 2000.

Notable Increases in Value:

Cotton, Pima	72%
Hay, Alfalfa	33%
Hay, Other	32%
Potatoes, Sweet	23%

Significant Declines in Value:

Barley	11%
Dry Beans	13%
Corn for Grain	20%
Cotton, Upland	33%
Oats	49%
Potatoes	13%
Rice	36%
Sugar Beets	49%

Hay was the state's highest-valued field crop with a total of \$1.02 billion, overtaking cotton with a value of \$658 million. Of the total hay value, alfalfa accounted for \$873 million and other hay was \$148 million. Nationally, the Golden State is the leading alfalfa-producing state and ranked second and third for all cotton and all hay production, respectively. The value of all hay increased 33 percent. This was based on a 4 percent production increase and a 28 percent jump in unit price per ton -- from \$90.50 in 2000 to \$116.00 in 2001. Hay was in strong demand to provide for the growing dairy industry.

All cotton production and harvested acreage both dropped 6 percent from last year. However, American Pima production jumped 85 percent, while Upland production declined 20 percent. The unit price of American Pima and Upland cotton dropped 7 and 16 percent, respectively. Planting began in mid-March, but cool, wet weather during the month and into early April caused a large amount of the acreage to be replanted. Due to poor Upland prices, a number of growers switched to American Pima. Warm weather during the growing season was beneficial and harvest began by mid-September in the Imperial Valley and late September in the San Joaquin Valley. Harvest progressed well and was nearly complete by mid-December.

Rice harvested acreage and production declined 14 and 12 percent, respectively, while the value dropped 36 percent. Lower unit prices were attributed to the large decline. Ideal conditions throughout the growing season provided for excellent yields. Cool nighttime temperatures during the sensitive cycles of rice growth were expected to drive yields down. Although, it was true in a few fields, most fields were unaffected by the cool nighttime temperatures. The weather during harvest also helped to boost yields as very little precipitation occurred during the harvest season. The large decrease in dry bean value was attributed to a 21 percent drop in harvested acreage and a 22 percent decline in production. Harvest of the dry bean crop went well with good quality reported. Corn for grain harvested acreage and production both dropped 22 percent from the previous year. Planting of the corn crop got underway in March and continued into April and May. Growth was normal during the growing season and harvest began in August and continued through the fall with no weather related problems. Sugar beet acreage, production and value all dropped about 50 percent from 2000. Some sugar beet plants closed in California and, therefore, there was a large decrease in acreage. Winter wheat production declined 3 percent, while Durum wheat dropped 12 percent. However, unit prices improved and the value rose 9 percent for winter wheat and 6 percent for Durum.

1/ Production is on a clean basis.

2/ Dashes represent data not published due to the estimate being discontinued, not estimated, or not available.

3/ Includes varieties not listed separately. Excludes beans grown for garden seed.

4/ Cotton bales are 480 lbs. net-weight.

5/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1992-01.

6/ Excludes sweet and wild rice.

7/ Includes some acreage carried over and harvested the following spring.

California Floriculture

Floriculture continued its rapid growth in 2001. The industry enjoyed record wholesale values again this year due to the strength of its leading producing states --- California, Florida, Texas, Michigan, and Ohio. These five states account for over half of the total value.

California maintained its position as the leading floriculture state in the nation, with a total wholesale value of \$988 million. This total represents 23 percent of the national value and a 7 percent increase from the previous year. Aided by its favorable coastal climate, California now accounts for 69 percent of the national value for all fresh, cut flowers. At \$292 million in sales, this represents a 1 percent increase over the 2000 total of \$288 million. The rose is the most popular cut flower in the nation, with California accounting for roughly 66 percent of the national value for all fresh, cut roses grown in the United States. While cut flower demand has continued to rise, domestic production has been declining with over two-thirds of the major cut flowers now imported. Most imports are coming from Columbia, Costa Rica, Ecuador, Mexico and the Netherlands.

California's total sales of potted flowering plants jumped 19 percent from \$172 million in 2000 to \$205 million in 2001. California is still the leading state with 25 percent of the national value. Sales of foliage plants showed a 7 percent increase from \$105 million in 2000 to \$112 million in 2001.

The wholesale value of bedding and garden plants jumped 5 percent from \$288 million in 2000 to \$304 million in 2001. The value for cut, cultivated greens was down 8 percent to \$16.6 million.

The number of floriculture producers in the state has been declining rapidly, and California now has 895 growers compared to 973 in 2000 with sales greater than \$10,000.

California Fruit and Nut Crops

California produced 13.9 million tons of fruit and nuts in 2001, 10 percent less than 2000. This represents 41 percent of the national fruit and nut production. The total value of California's fruit and nut production in 2001 was \$7.01 billion, down fractionally from the previous year. This represents 60 percent of the national total value of fruit and nut crops.

The Cherry crop was the only fruit crop to have a record value of production in 2001. Grapes continue to be the top-valued fruit and nut crop with \$2.65 billion, down 6 percent from the \$2.83 billion in 2000. California accounts for nearly all the national production of almonds, Clingstone peaches, dates, English walnuts, figs, kiwifruit, nectarines, olives and pistachios.

The Gold State dominates the nation in production of apricots, avocados, grapes, lemons, peaches, plums and strawberries. Crops with record production in 2001 were lemons, nectarines and walnuts.

Significant Increases in Production:

Almonds	18%
Avocados	32%
Cherries	18%
Dates	13%
Lemons	19%
Olives	153%
Walnuts	28%

Notable Decreases in Production:

Apricots	14%
Boysenberries	24%
Figs	29%
Grapes, Raisin	25%
Kiwifruit	24%
Oranges, Navels	11%
Oranges, Valencias	21%
Peaches, Clingstone	11%
Pistachios	34%
Plums, Dried (Prunes)	40%
Strawberries	15%
Tangerines	12%

In California, the 2001 season started with cooler-than-normal temperatures and below average precipitation in January. On a good note however, the relatively dry month allowed growers to perform the needed orchard and vineyard activities such as pruning, spraying, fertilizing, brush shredding, and preparing for new tree plantings. The cold weather provided sufficient chilling for a good dormancy, which is important for many non-citrus crops. Large scale weather patterns changed significantly in February as a series of Pacific storms moved into the State, helping to bring precipitation totals closer to normal. Almonds began blooming in late February and were in full-bloom by early March. The wet weather hampered bees pollinating almond trees. Warmer weather in March and April accelerated growth and pollination in orchards and vineyards. Thinning was active in the stone fruit during April and May. Nighttime temperatures dropped below freezing in early April and damaged some young grape shoots in Sonoma, Lake, Napa and Mendocino counties. Grapes and stone fruit in Fresno and Madera counties also suffered damage from frost and hail. Overall, damage from the frost and hail was minor. Record high temperatures in May accelerated tree fruit maturity and picking of many fruit crops began. Continued warm weather in June proved favorable for maturing stone fruit. Crop development of most commodities was about normal to slightly ahead throughout the growing season. The weather was fairly mild during July and August and harvest proceeded normally, which allowed growers to harvest their crops without any substantial problems. Most fruit and nuts had good quality. Walnuts experienced a very good year with record production and very good quality.

All citrus crops, except lemons, showed significant drops in production from the previous year. The fruit size and quality were good, but the set was down considerably. Lemon production however, jumped 19 percent from the previous year. The fruit size and quality were good.

1/ Equivalent packinghouse door returns.

2/ Estimates for "Grapefruit, Desert" and "Grapefruit, Other" were combined to "Grapefruit, All" starting in 1995-96. Season average values for all grapefruit are derived by weighting the season average value for each area by their carton weights. Prior to 1993-94, net weight per carton for Desert Valley was 32 pounds.

1/ Return at processing plant door or packinghouse door.

2/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1992 -- 12,500; 1993 -- 20,000; 1994 -- zero; 1995 -- 25,000; 1996, 1997, 1998, 1999, 2000 and 2001 -- zero. These acres were deducted from bearing acres before calculating yield.

3/ Raisin type production is the fresh equivalent of dried and not dried.

4/ Total value based on grower return.

5/ Acreage by county, variety and year of planting for 2001 are available upon request.

6/ These crops are almond hulls, black walnuts, jojobas (until 1991), limes, persimmons, pomegranates and in 1991, bushberries. Acres exclude almond hulls.

- 1/ Dried and frozen fruit included in total processed to avoid disclosure of individual operations.
- 2/ Processed fruit included in fresh market total to avoid disclosure of individual operations.
- 3/ Total processed includes canned, crushed, frozen and brined.
- 4/ Prices for processing and fresh totals were not published to avoid disclosure of individual operations. Small quantities processed included in fresh to avoid disclosure of individual operations.
- 5/ Includes substandard raisins diverted to other uses.
- 6/ Processed and fresh fruit not published to avoid disclosure of individual operations, but included in total utilized.
- 7/ Processed mostly canned, but includes other small quantities not published separately to avoid disclosure of individual operations.
- 8/ Total processing value per ton excludes dried processing.
- 9/ Not published separately to avoid disclosure of individual operations.

1/ Excludes raisins produced from table type grapes.

2/ Miscellaneous seedless grapes with Oleate applied.

3/ Missing 2001 data will be available by the end of January 2003.

California Livestock and Dairy

The Golden State's dairy industry continued its phenomenal growth as new record highs were set for the number of milk cows, milk production, and value of production. In 2001, California led the nation in total milk production with a record 33.3 billion pounds, representing a 3 percent increase from the previous year. The average number of cows in 2001 was 1.59 million, up 4 percent from 2000. Total milk value was \$4.63 billion, up 25 percent from the previous year. This increase is due to a 21 percent rise in the unit value, which went from \$11.50 to \$13.94 per hundredweight.

The five leading counties in milk production and number of milk cows were Tulare, Merced, Stanislaus, San Bernardino, and Kings. Collectively, these counties accounted for approximately two-thirds of the state's milk production and milk cows.

Nationally, California ranked first in nonfat dry milk production, first in butter production, and second in cheese production. California produced 49 percent of the nation's nonfat dry milk, 28 percent of the butter, and 20 percent of the cheese. Cheddar and mozzarella cheeses constituted approximately three-fourths of the cheese production in California.

Livestock cash receipts (excluding broilers) during 2001 totaled \$7.35 billion, up 18 percent from 2000. The increase in value was due mostly to a 25 percent rise in milk and cream and the total value of cattle and calves went up 11 percent.

Total production of the three red meat species (cattle, sheep and hogs) was 2.08 billion pounds, up 1 percent from the 2.05 billion pounds of a year ago. Total marketings of the three red meat species were up 3 percent, from 2.52 to 2.58 billion pounds. Cattle and calf marketings were 2.44 billion pounds, representing a 3 percent improvement. Sheep and lamb marketings of 82.3 million pounds were up 7 percent from 2000. Hog and pig marketings of 61.4 million pounds were down 23 percent from the previous year. This was the lowest amount marketed since 1989.

Cattle and calves marketed from California feedlots totaled 606,000, fractionally below 2000. Turkey production increased 3 percent to 451 million pounds in 2001. Egg production of 6.01 billion eggs was down 5 percent from the previous year. Honey production was 27.6 million pounds, down 10 percent from 2000. Wool production was 3.75 million pounds, down 6 percent from the previous year.

1/ Starting in 1993, the 100+ Head class was broken out into 100-199 Head and 200+ Head classes.

2/ Starting in 1997, the 200+ Head class was broken out into 200+ Head, 200-499 Head, and 500+ Head classes.

Grazing Fee Annual Average Rates, 1992-01 1/

Year	Per Animal Unit 2/	Cow-Calf	Per Head
	<i>Dollars Per Month</i>		
1992	10.09	13.29	12.09
1993	10.40	13.30	11.20
1994	11.00	13.10	11.80
1995	10.50	12.80	11.10
1996	10.10	12.20	11.90
1997	10.60	13.00	12.00
1998	11.50	14.50	12.90
1999	12.10	15.00	12.50
2000	12.30	15.50	12.70
2001	13.00	16.00	13.50

1/ The average rates are estimates (rates over \$10.00 are rounded to the nearest dime) based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Agricultural Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

1/ Live weight; adjustments made for changes in inventory and for inshipments.

2/ Live weight; excludes custom slaughter for use on farms where produced and interfarm sales within the State.

3/ Receipts from marketing and sale of farm slaughter.

4/ Hogs and pigs receipts for 1995 and 1996 include allowance for higher average price of State inshipments and outshipments of feeder pigs.

1/ Publication of livestock county estimates was reinstated in 2001.

2/ Combined in "Other Counties" to avoid disclosure of individual operations.

California Vegetables and Melons

California's diverse weather allows for year-round production of many vegetables, beginning in the desert during the winter months and then heading into the Central Valley and coastal areas as the season progresses.

The Golden State produced 29.6 million tons of vegetables and melons in 2001, 10 percent below 2000. However, California continues to lead the nation in vegetable and melon production, accounting for 40 percent of the acreage harvested, 72 percent of production and 56 percent of the total value.

Total value of vegetable and melon production was \$6.15 billion. Vegetable and melon production declined 10 percent and value of production dropped 7 percent from the previous year. Asparagus, carrots, sweet corn, cantaloupes and honeydews showed large increases in value. Notable decreases in value occurred in broccoli, celery, bell peppers and fresh and processing tomatoes.

In 2001, California produced 93 percent of the processing tomatoes in the country, with most coming from the rich farmland in the Sacramento and San Joaquin valleys. The Golden State also accounts for more than 90 percent of the nation's production of artichokes, brussels sprouts and celery. Additionally, California is home to more than 75 percent of the national production of broccoli, cauliflower, fresh market carrots, garlic, honeydews and leaf lettuce. Monterey County's fertile Salinas Valley is known worldwide for its abundant, high-quality vegetable crops, particularly artichokes, broccoli, cauliflower, celery and lettuce.

The production of several vegetable and melon crops declined last year after a very high production in 2000. Most of the reduction was the result of less acreage being planted and harvested. The month of January failed to bring the expected precipitation and with cooler-than-normal temperatures slowed winter vegetable crop development and delayed harvest. Weather patterns changed significantly in February when a series of Pacific storms moved into the State and, although the moisture was badly needed, it slowed crop development, interrupted winter harvesting and delayed planting of summer

crops. Warmer temperatures in late-February encouraged plant growth and harvesting resumed. As March began, a series of upper level low-pressure systems created cool, rainy conditions, which delayed harvesting of winter vegetables and planting of many summer vegetables. Warm weather by mid-March aided crop development and the vegetable crops flourished. This warm weather continued into April and May and was very beneficial in allowing the crops to catch up and progress normally. The remainder of the vegetable growing season was uneventful and planting and harvesting proceeded on schedule. The erratic weather in the winter and spring months interrupted the planting schedule for processing tomatoes. Some fields were affected by frost or hail, while others were affected by the heat during May. This may have caused the crop to start later than normal, as well as produce lower yield levels.

Notable Changes in Vegetable Production from 2000 to 2001:

Beans, Snap	+ 28%
Brussels Sprouts	- 15%
Carrots, Processing	- 34%
Garlic	- 13%
Onions	- 18%
Tomatoes, Processing	- 16%

Note to the Reader

Vegetable and melon estimates include commercial production, but exclude garden production and vegetables grown for seed. Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door.

For fresh market sales, the price is on a packed and loaded basis, Free-On-Board (F.O.B.) Shipping Point. To avoid disclosure of individual plants or operations, not all of California's data were published.

	2001	185,000	---	80,980	---	852,587

- 1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, F.O.B. shipping point.
- 2/ Program initiated in 1992.
- 3/ Starting in 1993, fresh market and processed acreage were published separately.
- 4/ Program initiated in 2000.
- 5/ Onion production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1992 -- 275,000 cwt., 1993 -- 346,000 cwt., 1994 -- 266,000 cwt., 1995 -- 266,000 cwt., 1996 -- 292,000 cwt., 1997 -- 278,000 cwt., 1998-2001 -- 250,000 cwt. Storage loss amounts are excluded when computing total value.
- 6/ Includes fresh and processed.
- 7/ Program initiated in 1998.
- 8/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The new crops added in 1992 and 2000 are excluded from the 1992 to present miscellaneous totals.
