

1994 CALIFORNIA ALMOND ACREAGE SURVEY

RELEASED: May 11, 1995
12:00 NOON PDT

CALIFORNIA AGRICULTURAL
STATISTICS SERVICE

OBJECTIVES

The California Agricultural Statistics Service (CASS) conducted an acreage survey to provide the Almond Board of California (ABC) with current acreage, variety, and year of plant data.

PROCEDURES

Acreage survey preparation was a cooperative effort between the almond, walnut, and prune industries. These industries felt an acreage survey was necessary due to action taken by the California Legislature in 1993 that eliminated funding for collection of acreage data. Due to the enormous number of almond, walnut, and prune growers in California, the survey was designed to operate on a two-year rotational basis with half of almond/walnut/prune growing counties contacted each year (see table back page). In the winter of 1995, twenty-one counties were surveyed. These twenty-one counties represent approximately half of the almond, walnut, and prune growers in the State.

CASS maintains a fruit data base which served as the main source for questionnaire mailing. Growers on this data base were sent a questionnaire with crop, variety, trees, acreage, and planting information pre-printed. Recipients were asked to update the information. The CASS data base also was compared to the California EPA pesticide permit list. Growers not included in CASS's data base were sent a blank questionnaire and asked to provide specific information on their respective almond, walnut, and/or prune acreage.

Acreage questionnaires were mailed on December 27, 1994. Respondents were given four weeks to return a response via mail. CASS personnel then conducted telephone follow-ups on non-respondents. Field personnel made personal visits to large growers and those CASS could not contact by mail or telephone. Survey data received on or before April 28, 1995 was edited and included in the final summary. Final analysis and summary work was completed on May 5, 1995.

RESULTS

The almond, walnut, and prune industry showed strong support for the survey. Over 9,000 parcel records were mailed to over 6,000 growers. Overall, approximately 80 percent of the parcels were completed representing about 95 percent of the acreage. Efforts to obtain information from the remaining non-respondents continue.

The 1994 California acreage survey results indicate 440,091 total acres of almonds. Of this total, 403,226 acres were bearing and 36,865 acres were non-bearing. The Nonpareil variety accounted for the majority of almond acreage planted at 47 percent of total acreage. The next most common variety was Carmel at 17 percent of total acreage. Kern County shows the largest acreage planted to almonds at 18 percent of total almond acreage. It is closely followed by Merced at 17 percent and Stanislaus at 16 percent of total acreage.

When interpreting data, please keep in mind that the Almond, Walnut, and Prune Acreage Survey was designed to function on a two year cycle. Half the counties were surveyed last year and the other half this year. Many of these changes were the result of extensive acreage data collection in counties that had not been surveyed in recent years.

The attached summary tables show results of the acreage survey. Most of this survey was completed prior to the March storms so the results do not take the storm damage into account. These data are for dissemination to the almond industry and other interested parties. Only State and county totals have been published; individual reports remain confidential.

ACKNOWLEDGEMENTS

A special thanks goes to the many almond, walnut, and prune farm operators and owners who provided information on their operations. The support was outstanding and we appreciate the time spent completing questionnaires. Likewise, thanks to the Almond Board of California, the Prune Marketing Committee, and the Walnut Marketing Board for their funding and support of this special acreage update survey.
