Released: May 7, 2008 - 12:00 p.m. PDT

RESULTS

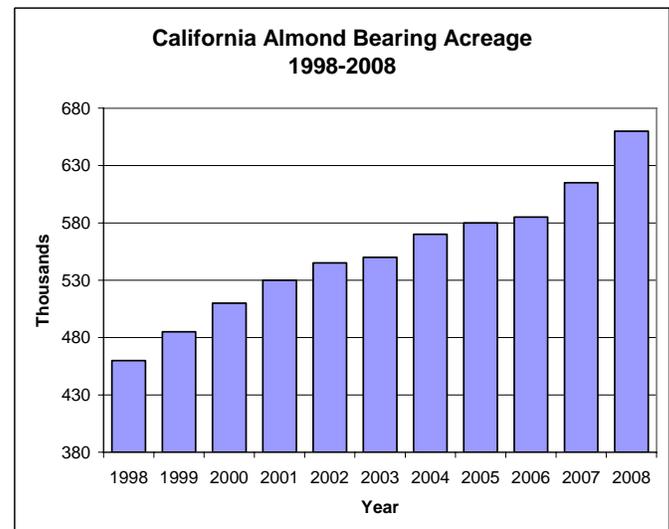

The initial forecast for the 2008 California almond production is 1.46 billion pounds. This is 6 percent above last year's revised production of 1.38 billion pounds. Estimated bearing acreage for 2008 is 660 thousand. This forecast is based on a telephone survey conducted April 23 - May 2 from a sample of almond growers. Of the 470 growers sampled, 251 reported. Acreage from these reports accounted for 18 percent of the total bearing acreage.

After a near perfect bloom, the 2008 California almond set looks strong. This year's bloom arrived three weeks later than normal and progressed quickly; it lasted only 10 days as opposed to the average three weeks. Overlapping bloom between varieties was outstanding this year, resulting in good cross-pollination, and there was an adequate supply of bees to pollinate the crop. The set of the Nonpareil variety is down slightly, but the set is up in other varieties.

PROCEDURES

Results of the subjective survey are based on **opinions** obtained from growers. The sample of growers changes from year to year and is grouped by size of operation, so all growers will be represented. Each selected grower is asked to indicate their almond yield per acre from last year and expected yield for the current year.

ACKNOWLEDGMENTS

A special thanks goes to the many almond farm operators and owners who provided information on their operations. The support was outstanding and we appreciate the time they spent completing telephone interviews.

California Almond Acreage, Production and Value, 1994-2008

Year	Bearing	Non-Bearing	Production	Yield Per Acre	Price Per Pound 1/	Value of Production 1/
	<i>Acres</i>		<i>Million Pounds</i>	<i>Pounds</i>	<i>Dollars</i>	<i>\$1,000</i>
1994	433,000	46,500	735	1,700	1.34	965,202
1995	418,000	65,700	370	890	2.48	880,896
