Statistical Reporting Service	Bureau of Agrl. Statistics

P. O. BOX 1258, Sacramento, California 95806

## FOREWORD

Since 1969 the California Crop and Livestock Reporting Service has endeavored to record and publish current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern to the industry was the magnitude of new plantings, especially premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern were acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. The drastic changes during that time period have been tabulated and released in annual grape acreage publications with data showing varietal and geographic changes affecting the grape industry.

The problem is no longer one of keeping abreast of new plantings and geographic change. It is one of accurately tabulating decreases in acreage due to removals, corrections, and planting failures. The acreages, varieties, locations, and ages of removals are now of greater concern than they were previously. To this end, with matched funds supplied by the raisin and wine segments of the industry and the United States Department of Agriculture, the Crop and Livestock Reporting Service has again compiled acreage statistics for use by interested persons.

## SURVEY METHODS

A questionnaire was mailed to vintners, grapestake suppliers, County Commissioners, Farm Advisors, and licensed nurseries to aid us in developing a list of new growers. Names which they supplied on the questionnaire were screened against current records to avoid duplication of operators and their operations. A list of new growers was developed. Each of these was later verified along with their acreages.

Following completion of the 1975 survey, corrected questionnaires were used to update the fruit acreage master files. Changes reflecting all information obtained from the previous grape acreage survey, from County Commissioners and our own fruit acreage surveys were used in the update. From these updated fruit acreage files, grape plantings for over 16,000 farms and over 9,000 operators were transferred to the 1976 grape acreage schedules. Each farm's grape acreage was listed with information concerning year of planting, vine counts, vine spacings, and net acreage at the location described on the questionnaire. The questionnaires were mailed to all operators asking for necessary changes and corrections to be made and returned to the Crop and Livestock Reporting Service.

Mail response was obtained on 65 percent of the schedules. All growers with greater than 100 acres in grapes were designated to be enumerated. Those who did not respond by mail were contacted by telephone or personal interview by field personnel. Those operators with less than 100 acres in grapes who did not respond were lumped into a "nonresponse" group. One-fourth of these operations were selected as the nonresponse sample. This sampled group was also enumerated by telephone or personal interview. All field work and enumeration was completed during April.

Acreage covered by mail and sample techniques amounted to about 92 percent of the total grape acreage. About 8 percent was estimated for by sample. Computer programs were used to summarize and assimilate data into county, variety, and age categories, as well as summaries for the various size groupings.

Timing of the survey was changed from summer to spring with the 1975 survey. This was done to enable a more accurate accounting of removals. The summer surveys were primarily designed to record new plantings. Removal data for the 1976 survey was recorded by additional questions on the regular questionnaire. Removal data was collected in the 1975 survey with a separate questionnaire.

### DATA LIMITATIONS

#### General

This report provides acreage data at several levels of detail. Although the procedures used were designed to minimize the impact of sample variation on the results, users are cautioned that the figures provided at the level of finest detail are subject to more sample variation than those at a gross level. The highest level of precision will, of course, be found at the State level for all grapes and for the three grape types. Somewhat less precision should be attached to data provided for minor varieties. An extreme example would be the case of a single grower of a minor variety in a county. If he were drawn in the sample of nonrespondents, the expansion process would exaggerate the county acreage for that variety. Cases such as this were not frequent and careful consideration was given to all aspects of each individual case before estimates were made.

A very high percentage of the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a very few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed and incomplete or questionable reports were resolved by secondary contact with the respondent. However, for most, the reported variety, acreage, and year planted were accepted as reported.

Comparison of the current inventory of 1975 and earlier plantings with those published a year ago reveals differences. The current estimate of 1975 plantings is higher because the 1976 survey accounted for acreage planted in 1975 after the survey was conducted, and rootstock grafted in 1976 was designated as planted in 1975. Other factors affecting data for all years are variations due to sampling procedure and changes by growers in acreage, variety, and year planted information reported by them in previous surveys.

### Varieties

Data are provided for each variety with 50 or more total acres standing in 1976. Acreages for all other varieties are combined in "Other" categories. Reports were received covering 154 varieties. Data are shown individually for 94 varieties including 64 wine types. Care was taken to properly identify each block reported with a recognized varietal name. However, a reasonable variety reported by the respondent was accepted with no further verification.

### Rootstock

Most of the rootstock acreage shown was planted in the past four years. However, some earlier plantings are included. These older rootstock blocks were verified by contacting the reporting growers. When rootstock is budded over, the year of planting assigned to that block of grapes is the year preceding the budding. For instance, if a 1970 rootstock planting is budded over in 1976, the year of planting assigned to the selected variety would be 1975.

### Period Covered

The primary intent of the 1976 project is to record removals of grapes since the 1976 harvest and new plantings of grapes during 1976. Planting activity is accounted for on a calendar year basis. Removal data pertains essentially to the period between the 1975 and 1976 harvests. In 1971 and 1972, we collected planting information on a July 1 to June 30 basis. Because of increased planting activity after mid-year since 1971, and because of many requests from data users, we changed to a calendar year basis for plantings with the 1973 report. For the 1973, and subsequent reports, growers were asked to report grapes actually planted during the year up to the time of their report and in addition, plantings intended to be made prior to the end of the year. Data shown in this report for 1974 and in most cases earlier years, reflect remaining actual plantings for the entire calendar year. No effort has been made to resolve inconsistencies with inventories published with earlier reports.

### ACKNOWLEDGEMENT

This survey was again undertaken at industry request. It was supported by contributions from the raisin and wine sectors of the industry with matching funds furnished by the United States Department of Agriculture.

We wish to express our gratitude to vintners, nurseries, County Commissioners, grapestake firms, Farm Advisors, and others who supplied us with names of individuals who planted grapes during the year. We would like to express further appreciation to farm owners and operators who provided information to us on their individual operations. Their forthright cooperation was greatly appreciated.

Finally, a special thanks goes to the field enumerators and office personnel whose efforts and diligence made this report possible.
