ACKNOWLEDGMENTS

This Survey was again undertaken at the request of the Grape Industry. Financial support was provided by the Wine Institute, the California Raisin Advisory Board, and the California Table Grape Commission. The enumeration of grape acreage in Napa and Sonoma counties by personnel in the County Agricultural Commissioners' offices is appreciated and worthy of special attention. We also extend sincere appreciation to farm owners and operators who provided information on their individual operations. Cooperation from all contributors is greatly appreciated. Finally, a special thanks goes to the office personnel and field enumerators whose efforts and diligence makes this report possible.

FOREWORD

Since 1969, the California Agricultural Statistics Service (CASS) has recorded current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially of premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern was acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. Grape acreage publications showing varietal and geographic changes have been available on an annual basis since 1971.

SURVEY METHODS

Parcel records for California's fruit and nut crops are maintained by CASS. Updates are made to the CASS database as information is received from on-going surveys, County Agricultural Commissioners and CASS County Fruit Acreage surveys.

Questionnaires were mailed to approximately 7,800 operators having slightly over 15,000 grape acreage parcels. Only operators with five or more acres of grapes received a questionnaire. Each questionnaire was computer-generated with the current database information listing of variety(ies), year(s) of planting, number of vines, acreage, etc. Operators were asked to note any corrections, including removals, new plantings, graftings, change of ownership or operator, etc. They were also asked to report the intended removals between the time of their report and the 1992 harvest. If the questionnaire was not returned by mail, the information was obtained by telephone or personal interview.

May 1992

DATA LIMITATIONS

GENERAL: This report provides acreage data at several levels of detail. Users should be cautioned that the figures at the finest level of detail are less precise than the aggregate level data. The highest level of precision will be found at the state level for all grapes and for the three grape types (raisin, table, and wine). Less precision exists in the county data for minor varieties.

In most cases, the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed. Incomplete or questionable reports were resolved by secondary contact with the respondent.

BEARING AND NON-BEARING ACREAGE: For purposes of this publication, all varieties are considered non-bearing for 3 years; i.e., acres planted in 1988 would not be bearing until 1991. The only exception is Flame Seedless table grapes in Riverside County where drip irrigation is used. As a result, these grapes bear substantially in the second year. Some varieties in other areas produce a crop after 2 non-bearing years, but production is not large enough to consider as full bearing.

GRAFTING: Graftings on bearing acres are recorded as planted in the previous year; i.e. Chardonnay grafted in 1988 onto a 1975 variety is recorded as planted in 1987. This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

RAISIN INDUSTRY DIVERSION PROGRAM: In 1991 the Raisin Administrative Committee administered the Raisin Industry Diversion Program. This program allowed growers of raisin type grapes to receive payment in kind if acreage was either removed or the vines were pruned so that they were unable to produce a crop. This program was not in operation during the 1989 or 1990 seasons.

VARIETIES: Data are provided for each variety with 50 or more total acres standing in 1991. Acreages for all other varieties are combined in "Other" categories. Data are shown individually for 90 varieties including 52 wine types. Care was taken to properly identify each block reported with a recognized varietal name.

Footnote c/ on page 33 lists synonymous varietal names.

ROOTSTOCK: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1984 rootstock planting was budded over in 1988, the year of planting assigned to the selected variety was 1987. (See the above paragraph on graftings.)

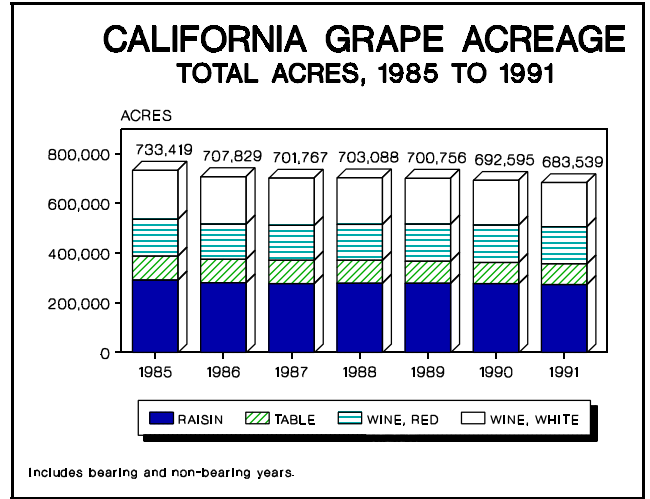

PERIOD COVERED: The primary intent of the 1991 survey was to record removals of grapes since the 1990 harvest and new planting of grapes during 1991. Acreage abandoned in 1991 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis. Removal data pertains essentially to the period between the 1990 and 1991 harvests.

ACREAGE BREAKDOWN

California's 1991 total grape acreage is estimated at 684,750 acres. This estimate is down 8,877 acres from the 1990 total of 693,627 acres. Wine type grapes totaled 326,666 acres, down 3,690 acres from the 1990 acreage of 330,356. Wine type grapes represent 47.7 percent of the total grape acreage. Raisin type varieties totaled 273,576 acres, down 3,331 acres from 1990. Raisin type grapes account for 39.9 percent of the total grape acreage. Table type grapes totaled 83,297, down 2,035 acres from last season. Table type grapes account for 12.2 percent of the total grape acreage. The rootstock total is 1,211 acres, approximately 0.2 percent of the grape acreage for the State.

Fresno County continues to lead the State in total planted grapes and raisin type grapes with 205,084 acres and 163,776 acres, respectively. Tulare and Kern counties lead in table type grapes planted with 22,930 acres and 22,965 acres, respectively. These two counties account for 55 percent of total table grape acreage. San Joaquin County remains the leader in red wine type grapes with 22,783 acres. Madera County continues to lead white wine type grapes with 24,428 acres. (See illustration next page.)

Thompson Seedless grapes, estimated at 263,693 acres, continue to represent over 96 percent of the raisin type grapes. Fresno County dominates raisin type grapes with 60 percent of the acreage. Flame Seedless grapes totaled 25,281 acres, which is the largest table variety. Zinfandel and Cabernet Sauvignon are the leading red wine grapes with 34,369 acres and 34,176 acres, respectively. These two varieties account for 46 percent of the red wine type grapes planted in the State. Chardonnay has surpassed French Colombard as the leading white wine variety 56,609 to 55,839 acres, respectively.

Total removals for the 1990-91 season were 17,571 acres. Thompson Seedless again had the most acreage removed with 3,878 acres. French Colombard was the second largest variety pulled out with 2,656 acres. Kern County led the State in removals with 4,027 acres. Total graftings for the 1990-91 season were 3,434 acres, down 14 percent from last season. Eighty-four percent of these vines were grafted over to wine varieties.

ACREAGE TRENDS

Raisin type grapes decreased a total of 3,331 acres from last year. The major varietal changes include a decrease of 3,565 acres for the Thompson Seedless variety and Muscat of Alexandria, down 169 acres. Fiesta is up 278 acres and the Black Corinth variety is up 172 acres.

Table type grapes decreased 2,035 acres. Most of this decline can be attributed to the following five varieties: Flame Tokay with a loss of 2,311 acres; Ribier declining 401 acres; Calmeria and Emperor with declines of 340 and 238 acres, respectively; and Exotic with a loss of 212 acres. Counteracting this overall decline was an increase of 849 acres in Redglobe grapes and a smaller increase of 212 acres for the Flame Seedless variety.

Red wine type grapes decreased a total of 743 acres from last year. Varieties with the largest declines were Carignane 816; Grenache 556; Barbera 423; and Rubired 346. Two varieties that had increased acreage were Cabernet Sauvignon at 970 and Merlot at 753 acres.

White wine type grapes decreased by 2,947 acres from 1990. Varieties showing declines include French Colombard 3,049; Chenin Blanc 2,085; and White Riesling 804. The Chardonnay variety increased the most, up 4,452.
