ACKNOWLEDGMENTS

This Survey was again undertaken at the request of the Grape Industry. Financial support was provided by special assessment of the Wine industry, the California Raisin Advisory Board, and the California Table Grape Commission. The enumeration of grape acreages in Napa and Sonoma counties by personnel in the County Agricultural Commissioners' offices is appreciated and worthy of special attention. We also extend sincere appreciation to farm owners and operators who provided information on their individual operations. Cooperation from all contributors is greatly appreciated. Finally, a special thanks goes to the office personnel and field enumerators whose efforts and diligence makes this report possible.

FOREWORD

Since 1969, the California Agricultural Statistics Service (CASS) has recorded current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially of premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern was acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. Grape acreage publications showing varietal and geographic changes have been available on an annual basis since 1971.

SURVEY METHODS

Parcel records for California's fruit and nut crops are maintained by CASS. Updates are made to the CASS database as information is received from on-going surveys, County Agricultural Commissioners and CASS County Fruit Acreage surveys.

Questionnaires were mailed to approximately 7,800 operators having slightly over 15,000 grape acreage parcels. Only operators with five or more acres of grapes received a questionnaire. Each questionnaire was computer-generated with the current database information listing of variety(ies), year(s) of planting, number of vines, acreage, etc. Operators were asked to note any corrections, including removals, new plantings, graftings, change of ownership or operator, etc. They were also asked to report the intended removals between the time of their report and the 1993 harvest. If the questionnaire was not returned by mail, the information was obtained by telephone or personal interview.

May 1993

DATA LIMITATIONS

GENERAL: This report provides acreage data at several levels of detail. Users should be cautioned that the figures at the finest level of detail are less precise than the aggregate level data. The highest level of precision will be found at the state level for all grapes and for the three grape types (raisin, table, and wine). Less precision exists in the county data for minor varieties.

In most cases, the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed. Incomplete or questionable reports were resolved by secondary contact with the respondent.

BEARING AND NON-BEARING ACREAGE: For purposes of this publication, all varieties are considered non-bearing for 3 years; i.e., acres planted in 1989 would not be bearing until 1992. The only exception is Flame Seedless table grapes in Riverside County where drip irrigation is used. As a result, these grapes bear substantially in the second year. Some varieties in other areas produce a crop after 2 non-bearing years, but production is not large enough to consider as full bearing.

GRAFTING: Graftings on bearing acres are recorded as planted in the previous year; i.e. Chardonnay grafted in 1992 onto a 1975 variety is recorded as planted in 1991. This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

RAISIN INDUSTRY DIVERSION PROGRAM: In 1991 and 1992 the Raisin Administrative Committee administered the Raisin Industry Diversion Program. This program allowed growers of raisin type grapes to receive payment in kind if acreage was either removed or the vines were pruned so that they were unable to produce a crop.

VARIETIES: Data are provided for each variety with 50 or more total acres standing in 1992. Acreages for all other varieties are combined in "Other" categories. Data are shown individually for 90 varieties including 52 wine types. Care was taken to properly identify each block reported with a recognized varietal name.

Footnote c/ on page 31 lists synonymous varietal names.

ROOTSTOCK: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1989 rootstock planting was budded over in 1991, the year of planting assigned to the selected variety was 1990. (See the above paragraph on graftings.)

PERIOD COVERED: The primary intent of the 1992 survey was to record removals of grapes since the 1991 harvest and new planting of grapes during 1992. Acreage abandoned in 1992 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis. Removal data pertains essentially to the period between the 1991 and 1992 harvests.

ACREAGE BREAKDOWN

California's 1992 total grape acreage is estimated at 684,546 acres. This estimate is virtually unchanged from the 1991 total of 684,750 acres. Raisin type grapes totaled 273,217, table type 83,747, and wine type 326,670 acres. Each type is virtually unchanged from 1991 totals. Raisin type varieties accounted for 39.9, table type 12.2, wine type 47.7, and rootstock at 912 acres, 0.2 percent of the total grape acreage for the state.

Fresno County continues to lead the State in total planted grapes and raisin type grapes with 204,559 and 163,619 acres, respectively. Kern and Tulare counties lead in table grapes planted with 23,977 and 23,593 acres, respectively. These two counties account for 57 percent of total table grape acreage. San Joaquin County remains the leader in red wine type grapes with 22,372. Madera County continues to lead white wine type grapes with 24,559 acres.

Thompson Seedless grapes, estimated at 263,621 acres, continue to represent over 96 percent of the raisin type grapes. Fresno County dominates raisin type grapes with 60 percent of the acreage. Flame Seedless grapes totaled 26,874 acres, which is the largest table variety. Cabernet Sauvignon and Zinfandel are the leading red wine grapes with 34,567 and 34,142 acres, respectively. These two varieties account for 46 percent of the red wine type grapes planted in the State. Chardonnay is the leading white wine variety at 59,971 acres.

Total removals for the 1991-92 season were 11,304 acres. Thompson Seedless again had the most acreage removed with 2,096 acres. Flame Tokay was the second largest variety pulled out with 950 acres. San Joaquin County led the State in removals with 2,386 acres. Total graftings for the 1991-92 season were 2,531 acres, down 26 percent from last season. Two-thirds of the vines were grafted to wine varieties, 51 percent were wine grafted to a new wine variety and 18 percent were table or raisin types grafted over to wine type.

ACREAGE TRENDS

Raisin type grape bearing acreage declined little. Thompson Seedless bearing acres have been reduced by 692 acres and Muscat of Alexandria bearing acres declined by 451 acres. This was offset by an additional 621 bearing acres in the Fiesta variety and 227 more bearing acres in the Black Corinth variety.

Table type grapes increased 1,559 bearing acres. Flame Seedless increased 2,067 and Redglobe increased 1,418 bearing acres. Flame Tokay declined 1,124 and Emperor 1,013 bearing acres.

Bearing acres for red wine type grapes were up by 4,534. Cabernet Sauvignon, Merlot, and Zinfandel increased by 3,047, 1,493, and 1,340 bearing acres, respectively.

White wine type grapes increased by 903 bearing acres. Chardonnay was the main variety with an additional 4,656 bearing acres. French Colombard and Chenin Blanc led the declines with 1,668 and 1,566 less bearing acres, respectively.
