ACKNOWLEDGMENTS

This Survey was again undertaken at the request of the Grape Industry. Financial support was provided by special assessment of the Wine industry and the California Table Grape Commission. The enumeration of grape acreage in Napa, and Sonoma counties by personnel in the County Agricultural Commissioners' offices is appreciated and worthy of special attention. We also extend sincere appreciation to farm owners and operators who provided information on their individual operations. Cooperation from all contributors is greatly appreciated. Finally, a special thanks goes to the office personnel and field enumerators whose efforts and diligence makes this report possible.

FOREWORD

Since 1969, the California Agricultural Statistics Service (CASS) has recorded current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially of premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern was acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. Grape acreage publications showing varietal and geographic changes have been available on an annual basis since 1971.

SURVEY METHODS

Parcel records for California's fruit and nut crops are maintained by CASS. Updates are made to the CASS database as information is received from on-going surveys, County Agricultural Commissioners and CASS County Fruit Acreage surveys.

Questionnaires were mailed to approximately 9,000 operators having slightly over 15,000 grape acreage parcels. Only operators with five or more acres of grapes received a questionnaire. Each questionnaire was computer-generated with the current database information listing of variety(ies), year(s) of planting, number of vines, acreage, etc. Operators were asked to note any corrections, including removals, new plantings, graftings, change of ownership or operator, etc. If the questionnaire was not returned by mail, the information was obtained by telephone or personal interview. Approximately 50 percent of the grape questionnaires were received by mail. The wine and table grape growers who did not respond were contacted by phone or personal visit. Funding was not available from the raisin industry this year. No attempt was made to obtain data from raisin grape growers that did not respond to the mail request.

May 1995

DATA CLARIFICATIONS

GENERAL: This report provides acreage data at several levels of detail. Users should be cautioned that the figures at the finest level of detail are less precise than the aggregate level data. The highest level of precision will be found at the state level for all grapes and for wine and table grape types. Less precision exists in the county data for minor varieties. Reliability of table and wine grape data is comparable to previous years; readers are cautioned that raisin grape information is less reliable. Detailed raisin grape statistics are not being published.

Beginning with this report, total (bearing plus non-bearing) grape acreage in the ground in the fall of 1993 is published alongside of the 1994 data.

In most cases, the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed. Incomplete or questionable reports were resolved by secondary contact with the respondent.

BEARING AND NON-BEARING ACREAGE: For purposes of this publication, all varieties are considered non-bearing for 3 years; i.e., acres planted in 1991 would not be bearing until 1994. The only exception is Flame Seedless table grapes in Riverside County, which are of bearing age after two years.

GRAFTING: Graftings on bearing acres are recorded as planted in the previous year; i.e. Chardonnay grafted in 1994 onto a 1975 variety is recorded as planted in 1993. This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

VARIETIES: Data are provided for each variety with 50 or more total acres standing in 1994. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name. Beginning with this report the **Muscat of Alexandria** variety is included under white wine varieties instead of raisin grape varieties.

Footnote 3/ on page 45 lists synonymous varietal names.

ROOTSTOCK: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1992 rootstock planting was budded over in 1994, the year of planting assigned to the selected variety was 1993. (See the above paragraph on graftings.)

PERIOD COVERED: The primary intent of the 1994 survey was to record removals of grapes since the 1993 harvest and new planting of grapes during 1994. Acreage abandoned in 1994 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

GRAPE CRUSH DISTRICTS: For the first time, **grape acreage is being published by grape crush districts** (see Table 10). A map and description of those districts is located on the inside front cover.

ACREAGE BREAKDOWN

California's 1994 total grape acreage is estimated at 707,689 acres. This estimate is up 9,514 acres from the 1993 total of 698,175 acres. Raisin type variety grapes totaled 278,558 acres. Beginning with the 1994 crop, Muscat of Alexandria variety grapes (5,230 acres) are under white wine type grapes instead of raisin type grapes. Raisin type varieties account for 39.4 percent of the total grape acreage. Table type grapes totaled 83,941, up 1,081 acres from last season. Table type grapes represent 11.9 percent of the total grape acreage. Wine type grapes totaled 344,260 acres. Wine type grapes represent 48.6 percent of the State's grape acreage. The rootstock total is 930 acres, approximately 0.1 percent of the grape acreage total.

Bearing acreage of red wine type grapes increased slightly. The largest wine bearing acreage increases occurred in Chardonnay, Merlot, and Zinfandel. Decreased bearing acreage included the French Colombard and Chenin Blanc varieties.

Table type grape bearing acreage decreased slightly. Flame Tokay, Emperor, and Perlette were among the varieties with declining acres, with Redglobe and Flame Seedless increasing the most.

1/ Non-bearing includes plantings for 1992, 1993, and 1994. See footnote 2/ below.

2/ Revised as a result of shifting Muscat of Alexandria from a raisin grape variety to a white wine variety, as well as, other small revisions to the 1993 data.

3/ COMMON NAMES:

Table Type Varieties -- Beauty Seedless/Black Beauty, Malaga/White Malaga, Red Crimson/Crimson Seedless, Redglobe/Rose-Ito, Ruby Seedless/King Ruby, Superior Seedless Brand/Sugraone.

White Wine Type Varieties -- Muscat Blanc/Muscat Canelli, Palomino/Golden Chasselas, St. Emillion/Ugni Blanc/Trebbiano, Sylvaner/Franken Riesling, White Riesling/Johannisberg Riesling.

Red Wine Type Varieties -- Gamay/Napa Gamay, Mataro/Mouvedre, Sangiovetto/Sangiovese, Syrah/French Syrah/Shiraz.

4/ Table grape variety Flame Seedless begins bearing after two non-bearing years in Riverside County.

5/ Variety included with "Other" in 1993.
