ACKNOWLEDGMENTS

This Survey was again undertaken at the request of the Grape Industry. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee. The enumeration of grape acreage in Napa, and Sonoma counties by personnel in the County Agricultural Commissioners' offices is appreciated and worthy of special attention. We also extend sincere appreciation to farm owners and operators who provided information on their individual operations. Cooperation from all contributors is greatly appreciated. Finally, a special thanks goes to the office personnel and field enumerators whose efforts and diligence makes this report possible.

FOREWORD

Since 1969, the California Agricultural Statistics Service (CASS) has recorded current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially of premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern was acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. Grape acreage publications showing varietal and geographic changes have been available on an annual basis since 1971.

SURVEY METHODS

California Agricultural Statistics Service (CASS) maintains a grape acreage data base which served as the main source for questionnaire mailing. Growers on this data base were sent a questionnaire with previous reported, variety, number of vines and acreage. Recipients were asked to update the information. The CASS data base was also compared to the California Department of Pesticide Regulations (DPR). Growers not included in CASS's data base were sent a blank questionnaire and asked to provide specific information on their grape acreage. More than 16,000 parcel records were mailed to over 8,000 grape growers. Overall, more than 97 percent of the parcels were completed. Approximately 56 percent of the parcels were returned by mail, 35 percent by telephone, and 9 percent by personal interview.

June 1996

DATA CLARIFICATIONS

GENERAL: This report provides acreage data at several levels of detail. Users should be cautioned that the figures at the finest level of detail are less precise than the aggregate level data. The highest level of precision will be found at the state level for all grapes and for the three grape types (raisin, table, and wine). Less precision exists in the county data for minor varieties.

In most cases, the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed. Incomplete or questionable reports were resolved by secondary contact with the respondent.

BEARING AND NON-BEARING ACREAGE: For purposes of this publication, all varieties are considered non-bearing for 3 years; i.e., acres planted in 1992 would not be bearing until 1995. The only exception is Flame Seedless table grapes in Riverside County, which are of bearing age after two years.

GRAFTING: Graftings on bearing acres are recorded as planted in the previous year; i.e. Chardonnay grafted in 1995 onto a 1975 variety is recorded as planted in 1994. This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

VARIETIES: Data are provided for each variety with 50 or more total acres standing in 1995. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Footnote 3/ on page 47 lists synonymous varietal names.

ROOTSTOCK: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1993 rootstock planting was budded over in 1995, the year of planting assigned to the selected variety was 1994. (See the above paragraph on graftings.)

PERIOD COVERED: The primary intent of the 1995 survey was to record removals of grapes since the 1994 harvest and new planting of grapes during 1995. Acreage abandoned in 1995 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

GRAPE CRUSH DISTRICTS: Grape acreage data is also being published by grape crush districts (see Table 12). A map and description of those districts is located on the inside front cover.

ACREAGE BREAKDOWN

California's 1995 total grape acreage is estimated at 718,743 acres. This estimate is up 11,055 acres from the 1994 total of 707,688 acres. Raisin type variety grapes totaled 277,190 acres. Raisin type varieties account for 38.6 percent of the total grape acreage. Table type grapes totaled 85,539, up 1,598 acres from last season. Table type grapes represent 11.9 percent of the total grape acreage. Wine type grapes totaled 354,417 acres. Wine type grapes represent 49.3 percent of the State's grape acreage. The rootstock total is 1,597 acres, approximately 0.2 percent of the grape acreage total.

Bearing acreage of red wine type grapes increased 1,020 acres, while white wine bearing acres decreased 7,187 acres. The largest wine bearing acreage increases occurred in Chardonnay, Merlot, and Zinfandel. Decreased bearing acreage included the French Colombard and Chenin Blanc varieties.

Table type grape bearing acreage decreased 1,543 acres. Flame Tokay, Emperor, and Perlette were among the varieties with declining acres, with Redglobe and Flame Seedless increasing the most.
