## SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage, bearing and non-bearing -- The first table shows estimated bearing and non-bearing grape acreage by type (Page 2). The second table shows estimated wine-type grape bearing acreage by variety (Page 3).
- ▶ Detailed data by variety, year planted, and county -- As voluntarily reported by grape growers and maintained in CASS's data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- ▶ A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 41,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2003 prior to being pulled out, and that acreage has already been removed from the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included in CASS's data base. The mailing was made in late December 2003 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

To arrive at the estimated grape acreage, the CASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years ( i.e., acres planted in 2001 would not be bearing until 2004). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year ( i.e., Chardonnay grafted in 2003 onto a 1980 variety is recorded as planted in 2002). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2003. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2001 rootstock planting was budded over in 2003, the year of planting assigned to the selected variety was 2002. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2003 survey was to record removals of grapes since the 2002 harvest and new planting of grapes during 2003. Acreage abandoned in 2003 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2003 grape acreage is estimated by the California Agricultural Statistics Service (CASS) at 882,000 acres. Of the total acres, 819,000 were bearing and 63,000 were non-bearing. The breakdown by type is as follows: Raisin type totaled 260,000 acres with 255,000 bearing and 5,000 non-bearing; Table type totaled 93,000 acres with 85,000 bearing and 8,000 non-bearing; Wine type totaled 529,000 acres with 479,000 bearing and 50,000 non-bearing.

Varieties are not published for raisin type grapes because no industry funding was received. However, the Thompson Seedless continues to be the leading variety and is used for raisins, fresh market, concentrate and wine.

**ACKNOWLEDGMENTS**

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission. The raisin industry did not fund the acreage survey this year so the raisin variety data are not included in this report.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Kelly Albelo, Jeff Olson, Pam Benner, Regina Claypoole, Carol Cole, Pearl Gonzalez, Ann Jehn, Janell McAllister, Susan Young, Lupe Oropeza, Jeremiah Rhine, Cordia Weems and Sheryl Zazzi.
