

# 2000 California Pistachio Acreage Survey

Released: August 1, 2000  
12:00 NOON PDT

CALIFORNIA AGRICULTURAL  
STATISTICS SERVICE

## OBJECTIVES

California's pistachio acreage has grown substantially over the past 30 years. In order to keep track of the total pistachio acreage, the California Agricultural Statistics Service (CASS) conducts a Pistachio Acreage Survey by variety/rootstock and year of planting every three years. Since this year marks the third year from the last survey, CASS conducted another survey.

## PROCEDURES

In order to capture all of California's pistachio growers, CASS's grower list was updated using data from California Pistachio Commission (CPC), Agricultural Commissioner Pesticide Permits, certain nurseries, and other industry sources. Input for the survey structure and questionnaire design was provided by certain personnel in the pistachio industry with particular attention focused on re-plants and rootstock. The acreage questionnaires were mailed in early March. Individuals who did not respond to the mail survey were contacted by telephone and those who still could not be contacted were visited by field personnel.

## RESULTS

California's 2000 Pistachio Acreage Survey had a high response rate. The following summary tables reveal the results of this survey. (Only State totals have been published --- all individual reports remain confidential.) Table 1 shows the number of acres planted by variety/rootstock. Tables 2, 3, 4, 5, and 6 reveal the number of acres planted to Kerman/Terebinthus, Kerman/Atlantica, Kerman/Pioneer Gold I, Kerman/Pioneer Gold II, and Pollinizer Peters, respectively, for leading counties. The final table (Table 7) shows the number of pistachio acres planted in major counties. In each table, data for 1981 through 2000 were presented separately, and data for 1980 and earlier were summed together.

California's 2000 pistachio planted acreage is 96,307 acres (74,578 bearing and 21,730 non-bearing) (Figure 1). Kern County accounts for 42% of the total acreage. It is followed by Madera (21%), Kings (10%), Tulare (9%), Fresno (8%), Merced (5%) and all others (5%) (Figure 2).

During the early 1970's, many of the original orchards planted with Atlantica rootstock were dying because they were not resistant to verticillium wilt. This was evident for Kern County orchards planted in acreage previously cultivated with cotton. To remedy the problem, verticillium wilt resistant rootstocks such as Pioneer Gold I and II were developed. As of June 2000, Atlantica rootstock represented only 30% of the total pistachio acreage. This is in contrast to Pioneer Gold I rootstock which accounts for 58%.

## ACKNOWLEDGEMENTS

CASS would like to thank the pistachio farm operators and/or owners who provided information for their operations. Likewise, thanks to the CPC for their continued funding and support for the acreage update survey.
