

California Processing Tomato Report

Cooperating with the California Department of Food and Agriculture

California Field Office · P.O. Box 1258 · Sacramento, CA 95812 · (916) 498-5161 · (916) 498-5186 Fax · www.nass.usda.gov/ca

Released: May 29, 2009 12:00 p.m. PDT

As of May 15, California's tomato processors reported they have or will have contracts for 13.3 million tons of processing tomatoes for 2009. This production is 14 percent higher than the contracted production of last year.

The May contracted acreage of 308,000 is the same as the January intentions forecast.

Fresno County retains the top spot over all the counties in contracted planted acreage for 2009 with 102,000 acres. San Joaquin County grabbed the number two position with 44,000 contracted planted acres. Rounding out the top five counties for contracted planted acreage in 2009 were Yolo, Kern and Kings.

Processing tomato growers in the Sacramento-San Joaquin Delta are uncertain of the availability of irrigation water this season. In late January, many acres were bedded for tomatoes and set up with surface drip irrigation systems. Spring field preparations continued through February. Processing tomato fields were being planted in March. Ground preparation and the planting of tomato seed and transplants took place throughout the state April through May. There was no indication of major quality issues or insect problems.

This early processing tomato estimate is funded by the California League of Food Processors, in cooperation with the California Department of Food and Agriculture. The USDA estimate for all states will be issued on July 10.

ACREAGE AND PRODUCTION (CONTRACT AND TOTAL) - CALIFORNIA
