2013 PROCESSING TOMATO PRODUCTION

Contracted production for California processing tomatoes is forecast at 12.5 million tons, averaging 48.83 tons per acre. The current forecast is slightly below the 2012 crop and down 5 percent from the May forecast. Harvest started the first week of July in the Southern growing areas. Those fields suffered significantly from the curly top virus; as a result they produced lower than expected yields. Growers were applying treatments to alleviate the pressure.

Curly top is still evident but there have been fewer new infections, and it seems to have dropped off. Yields are expected to edge up as harvest continues. The industry is paying close attention to the maturity of the crop—if too much is ready at the same time, it could cause delays at processing plants and gaps in production.

California's Harvested Processing Tomatoes
Weekly Cumulative Totals for 2008 through 2013

ACREAGE AND PRODUCTION (CONTRACT AND TOTAL) - CALIFORNIA

Year	Total Crop				Contract Only
