July 1985

Dear Friend:

This 1985 edition of Colorado Agricultural Statistics, compiled by our Federal-State Crop and Livestock Reporting Service, documents the contributions that the 27,000 Colorado farm families along with the many agri-business industries make to the Colorado economy. Preliminary data for 1984, along with revised county data for the years 1979 through 1983, are combined in this publication.

The value of this publication is that the information it contains is available to all -- not just to those who have the resources available to develop or pay for private services of statistics. Because of the availability of this unbiased timely statistical data, we have access to a valuable management tool.

I would like to express my personal thanks to the many farmers, ranchers, and agri-businesses who voluntarily take the time to provide the data for this publication by reporting on numerous agricultural surveys. It is only through their continued cooperation that accurate, current, and useful crop and livestock statistics can be assembled and published.

Should you have any questions or comments on this publication, please feel free to contact the Crop and Livestock Reporting Service at 964-0250.

Sincerely,

T. Schultz

Timothy W. Schultz

Commissioner

TABLE OF CONTENTS

Colorado's rank in agriculture 2
Crop and livestock indexes; Land in farms 3

FIELD CROPS:
- Principal crops; planted and harvested acreage 4
- Acreage, production, and value 5
- Acreage and production by cropping practice 10
- 1984 crop review 12
- Value of crop production by district and county 16
- District and county estimates by crop:
  - Winter wheat 31
  - Spring wheat 39
  - Corn for grain 44
  - Corn for silage 52
  - Barley 56
  - Oats 64
  - Sorghum for grain 72
  - Dry beans 77
  - Sugar beets 82
  - Hay crops 84
- Potatoes; production and disposition 102
- Wheat and barley varieties 104
- Grain and hay stocks 106

FRUITS, VEGETABLES, AND MISCELLANEOUS:
- Fruits and vegetables - 1984 review 109
- Fruit production and value 110
- Vegetables - acreage, production, and value 111
- Onions - acreage, production, and value 112
- Floriculture 113
- Planting and harvesting dates 114
- Precipitation 115
- Fertilizer statistics 116
- Per capita consumption of food products 117

PRICES AND FARM INCOME:
- Price review and season average prices 118
- Monthly prices received by commodity 119
- Farm income, 1982-83 122
- Farm production expenses 123
- Cash receipts by commodity 124

LIVESTOCK AND POULTRY:
- 1984 Livestock review 126
- Operations by specie; Inventory by class 127
- Sheep and wool 131
- Production, disposition, and income by specie 132
- Livestock slaughter 133
- Pasture and range feed condition 135
- Livestock inventory by district and county 136
- Cattle on feed statistics 144
- Number of feedlots and fed cattle marketings 152
- Dairy and dairy products 154
- Poultry 156
- Livestock: Number on farms and value 158

INDEX 159

Commodity	Unit	Colorado		Leading State		United States total
		Rank	Production	State	Production	
FIELD CROPS:

* Not Available

1 Includes Durum wheat

2 Excludes Durum wheat

3 Fresh market except where noted as processing (P).

4 Inventory January 1, 1985 for cattle and sheep; December 1, 1984 for hogs and chickens.

5 Cows and heifers that have calved.

6 As of 1/1/85.

7 13 major feeding states.

8 Hens and pullets of laying age.

Production indexes are used to measure year-to-year changes in the gross output and to compare the overall level of production with a base period. The base year for the Colorado production indexes has been shifted to a 1977 base to be consistent with the national level for production and price indices.

For each year, the production for each commodity is multiplied by its 1977 season average to obtain a value of production. These values are totaled by subgroups and groups which are divided by the comparable 1977 values to obtain the percent each year is of the base period. By using a constant per-unit value for each commodity throughout the series, changes in the index reflect the actual changes in production of the commodities from year to year as well as the change in production compared with the base period.

[1] Yield and production, cleaned basis.

The All Crops Production Index for 1984 increased 11 points to 132 percent of the 1977 base period, reflecting the good production year for many crops. The Food Grains Index was down 12 points, reflecting the smaller wheat crop produced in 1984. Although the crop was smaller, it was still the second largest of record. The Feed Grain Index rebounded from the Payment in Kind (PIK) and Acreage Reduction Program reduced crops in 1983 and increased 27 points from a year earlier to 123 percent of the 1977 base period. The Potato, Other Crops, and Vegetable Indexes were also up sharply from the previous year levels and were well above the base period. The Fruit Index was down sharply as a result of freeze shortened crops in 1984.

Winter wheat retained its number one ranking in total grain production in 1984. This year's crop, at 110.4 million bushels, was down 6 percent from the record 1983 crop of 117.0 million bushels but was still the second largest output ever produced in the state. The wheat crop was harvested from 3.2 million acres, up 200,000 from the 1983 acreage. The 1984 average winter wheat yield was 34.5 bushels compared with the record 39.0 bushels in 1983. Corn acreage and production was up sharply from a year earlier but did not fully rebound from the 1983 levels which were sharply reduced by the Acreage Reduction and PIK programs. Producers harvested just over 91 million bushels of corn from 680,000 acres in 1984, for an average yield of 134.0 bushels per acre. The acreage harvested was 70,000 above the previous year and the yield was up 12.0 bushels per acre largely, because of a more favorable growing season compared with the freeze shortened season in 1983.

Nearly all crops were at higher production levels when compared with the PIK and Acreage Reduction Program reduced crops and a freeze shortened growing season in 1983. Production was above a year earlier for the following crops: grain sorghum, up 229 percent; sugar beets, up 60 percent; dry beans, up 35 percent; millet, up 28 percent; both corn for grain and barley, up 22 percent; potatoes, up 21 percent; oats, up 15 percent; and alfalfa hay, up 7 percent. Declines were noted for spring wheat, down 4 percent; sorghum silage, down 7 percent; and other hay, down 18 percent.

The 1984 winter wheat crop was seeded later than normal as producers waited for moisture. The late summer and fall were dry in much of the wheat producing area and several growers "dusted in" their crop. Growth prior to dormancy was limited, but adequate snowfall sustained the crop during the winter months. A wet spring prompted a very good crop in most areas. A late spring in the northwest delayed early growth, and wheat in that area was late maturing. Early snowfall caught a lot of wheat still in the fields in the area and many producers were not able to harvest their crop. In eastern Colorado, the cool, wet spring stimulated plant growth but delayed overall development and maturity of the grain. As a result, fields did not mature evenly, and harvest was delayed until entire fields were ready. Once started, however, harvest progressed rapidly with only occasional delays from afternoon thunderstorms.

Seeding of spring grains was often delayed because of rain showers which kept most crops behind their normal development schedule. Corn and sorghum were also planted a little later than normal, but a good growing season without an early frost enabled the crops to mature and very good yields were obtained by producers. Frequent rain showers during August interrupted harvest of spring grains and made it extremely difficult for hay producers to get their crop harvested. The third and fourth cuttings of hay were cut short by a heavy snow storm in late October which resulted in considerable spoilage of down hay. Sugar beet producers also had extreme difficulty harvesting their crop until drier weather arrived in November.

The 1985 winter wheat crop was seeded under near normal conditions although topsoil moisture was limited in most areas and dry conditions were common throughout the southeast. The early wet snow in the northwest kept producers in that area from seeding much of their normal winter wheat acreage, which made it necessary to seed spring grain. The 1985 winter wheat crop had little winter damage and has benefited from frequent spring showers. Development of the new crop was 7 to 10 days ahead of normal as of May 1, and one of the earliest harvests in recent years was expected throughout the state.

[1] Following year of production

FRUIT CROPS - 1984

Colorado's fruit crops were once again reduced by adverse weather in 1984. Production of each fruit was well below the 1983 output, especially for apples and cherries. Production of all fruit crops totaled 78.6 million pounds in 1984 compared with 107.5 million pounds a year earlier. Total value of the 1984 crop was $10.3 million compared with $12.2 million for the 1983 crop.

Apple production for 1984 totaled 60.0 million pounds, down 29 percent from the 84.0 million pounds in 1983 but 50 percent above the 1982 output. Total value of the 1984 crop, at $6.8 million, was only 11 percent below a year earlier.

Peach production for 1984 totaled 8.5 million pounds, down 11 percent from 1983. Per unit prices were somewhat improved over a year earlier and nearly offset the effects of the smaller crop. Total value of the 1984 crop, at $2.16 million, was down only 2 percent from the $2.20 million crop produced the previous year.

Pear production totaled 4,550 tons in 1984, down 14 percent from the 5,300 tons produced in 1983. Growers received a much higher price per ton for their 1984 crop, and the total value of $1.01 million was 14 percent above the 1983 value.

Sweet cherry production totaled 250 tons in 1984 compared with 900 tons the previous year. Growers received only a slightly better price per ton resulting in a total value of the 1984 crop at $232,000—70 percent below the $762,000 crop produced in 1983.

Tart cherry production in 1984 totaled 500,000 pounds, 69 percent below the 1.6 million pounds produced a year earlier. The latest crop was valued at $125,000 compared with the $671,000 crop produced in 1983.

VEGETABLE CROPS - 1984

Vegetable producers in Colorado harvested 299,520 tons of fresh market and processing vegetable crops in 1984 compared with 263,450 tons in 1983. These totals include only the vegetable crops for which estimates are prepared in Colorado. Numerous other vegetable crops are grown in the state but are not surveyed for acreage and production data. The larger output resulted primarily from a larger crop of onions, although increased production also occurred for carrots and sweet corn. Smaller crops of lettuce and tomatoes were partially offsetting. The combined value of the five vegetable crops totaled $64.3 million for 1984, up 12 percent from $57.3 million a year earlier.

Storage onions continue to be Colorado's largest vegetable crop, representing 71 percent of both the total tonnage produced and the total value of production. Harvested area, at 12,200 acres, was 17 percent above the previous year and yields averaged 20 cwt. higher, at 350 cwt. per acre. The total production of 4,270,000 cwt. was 24 percent above 1983's output. The preliminary value of the 1984 crop was estimated at $45.7 million, 17 percent above a year earlier.

Lettuce growers produced 756,000 cwt. of that crop in 1984, down 15 percent from the 893,000 cwt. produced a year earlier. The 2,800 acres harvested was 1,000 acres below the previous year, but the average yield of 270 cwt per acre was 35 cwt above the 1983 average. Total value of the 1984 crop, at $10.6 million, was virtually the same as a year earlier.

The 1984 **carrot** crop, at 280,000 cwt., was harvested from 1,000 acres which averaged 280 cwt. per acre. The 13 percent increase in production was partially offset by a lower value per cwt. as the total value of $3.5 million was only 3 percent above a year earlier.

Sweet corn production totaled 408,000 cwt. in 1984, up 18 percent from the 345,000 cwt. produced in 1983. Value of production, at $3.4 million, was 13 percent above the previous year.

Tomatoes for processing added $1.1 million to the value of vegetable crop production. The 13,820 tons produced was 21 percent below 1983, but a higher per unit value resulted in only a 10 percent decline in total value.

PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers. For major crops, price data are also used in calculating deficiency payments and "triggering" the movement of commodities out of USDA Reserve Programs.

The basic data for prices received are provided voluntarily by producers, grain dealers, and others who purchase agricultural products. Historically, price data were collected primarily through mailed questionnaires. In recent years, the application of probability sampling and personal enumeration methods have provided more meaningful and reliable price information.

Data collected through price inquiries and other survey questionnaires measure the disposition of individual commodities and the amount of product that is sold during each month of the marketing year. These monthly marketing volumes are used to weight previously estimated monthly prices to a season average price. Monthly and season average prices reflect all sizes and grades of each commodity sold. Season average prices are based upon the marketing year for each commodity and, in most cases, do not correspond to a calendar year average price.

Season average prices, by commodities, Colorado, 1976-84

COLORADO FARM INCOME

1983 — Realized net farm income for Colorado farmers and ranchers totaled $334.0 million for 1983, down 11 percent from the $375.3 million realized a year earlier. With an allowance made for the net change in inventory values, the 1983 total net farm income was $447.4 million, 56 percent above the previous year. Gross farm income, at $3,326.4 million, was 1 percent below 1982 while farm production expenses were virtually unchanged at $2,992.4 million. The average total net farm income for Colorado's 27,000 farm and ranch operators in 1983 was $16,570 compared with an average of $10,407 a year earlier. Most of the difference however, is attributable to the change in inventories as the average realized net farm income for 1982 and 1983 was $13,647 and -$12,370, respectively.

Cash receipts from the sale of crops, livestock, and livestock products in Colorado totaled $2,927.0 million in 1983 compared with $3,051.8 million a year earlier. Livestock and products receipts were down 1 percent from 1982 to $2,000.4 million in 1983. The latest total represented 68.3 percent of the state's total cash receipts compared with 66.0 percent of the 1982 total. Receipts from the sale of cattle and calves, at $1,652.4 million, represented 56.5 percent of the state's total cash receipts and 82.6 percent of the livestock and products total. Crop receipts totaled $926.6 million in 1983, down from $1,037.8 million a year earlier. Those totals represented 31.7 percent and 34.0 percent of the state's total receipts for 1983 and 1982, respectively. Wheat was the major contributor to crop receipts, accounting for 9.4 percent of the state total and 29.6 percent of the crop receipts. Corn was a close second with 8.9 percent of the state total and 28.1 percent of the crop receipts.

Government payments increased 138 percent from 1982 and added $164.0 million to Colorado's 1983 gross farm income. The major increase from the previous year came from the Payment-In-Kind Program. Non-Money income declined slightly from the record high of $207.7 million to $203.7 million—the second highest. Other farm income declined 20 percent from the 1982 record high of $40.0 million to $31.8 million for 1983.

Farm production expenses were virtually unchanged from 1982, declining only slightly to $2,992.4 million for 1983. Feed was the only operating expense for which a higher outlay was made in 1983, and that component increased 16 percent from 1982. The PIK Program reduced acreages of several crops and limited fertilizer usage, so expenditures for that component were 21 percent below the previous year. Livestock expenses, which represented nearly 27 percent of the total, were virtually unchanged from 1982. Taxes on farm property and net rent to non-farm landlords increased by 3 percent and 27 percent, respectively, from a year earlier.

1984 — Preliminary data indicate that cash receipts from the marketing of farm commodities will total nearly $4.0 billion for 1984. If those indications materialize, total receipts would be 37 percent above 1983 to a new record high. Livestock and products receipts, which are expected to be up 48 percent to a record high $2,956.5 million, would represent 74.0 percent of the total. Crop receipts are expected to be up 12 percent to $1,040.6 million, also a record high, but their percent of the total would fall from 31.7 percent in 1983 to 26.0 percent in 1984.

1984 LIVESTOCK REVIEW

The Livestock and Livestock Products Index for 1984 increased 2 points from a year earlier to 106 percent of the 1977 base period. The Meat Animal Index, at 97 percent of the base period, was 3 points above the previous year. The Dairy Products Index declined 4 points from 1983 but was still 15 points above the 1977 base. The Poultry and Egg Index, at 125 percent of the 1977 base, was 3 points above the previous year.

Inventory numbers in Colorado were below year earlier levels for cattle and calves and hogs. The smaller inventory of all cattle and calves was mostly the result of fewer beef cows. The all hogs and pigs inventory as of December , 1984 was lower as a result of declines in both breeding stock and market hogs and pigs. The all sheep inventory was unchanged from a year earlier as a large decline in stock sheep was offset by an increase in the number of sheep and lambs on feed. The state's poultry inventory for December 1, 1984 was the only specie which showed an increase over the previous year.

The 1984 grazing season had a slow start as dry conditions in the southeast and prolonged snow cover at higher elevations delayed forage growth into June. In other areas, warmer temperatures and adequate moisture stimulated forage growth and resulted in good grazing conditions for most of the season. At higher elevations, excellent forage growth followed the snow melt. The usual drying out across the eastern plains occurred during August and September and an early snow and freezing temperatures brought an abrupt end to the grazing season statewide. Early prospects were mostly favorable for the 1985 grazing season although early spring growth was delayed by the lack of topsoil moisture in eastern areas and a heavy snow pack in the mountains.

ALL CATTLE AND CALVES - The inventory of all cattle and calves on Colorado farms and ranches totaled 3,000,000 head as of January 1, 1985, four percent less than the number on hand a year earlier. The decrease from the previous year was mostly the result of a smaller beef cow herd. The beginning year inventory of cattle and calves on feed, at 1,000,000 head, was 2 percent above a year earlier. Marketings of fed cattle from Colorado feedlots during 1984 totaled 2,195,000 head, 2 percent below the 2,245,000 marketed in 1983 but 8 percent above the number marketed during 1982. Colorado's dairy herd inventory as of the first of the year was 75,000 head, down 2,000 from January 1, 1984. Milk production for 1984 totaled 956 million pounds, 3 percent below 1983. The January 1, 1985 inventory value of all cattle and calves on Colorado farms and ranches totaled $1.32 billion, about 1 percent above a year earlier.

SHEEP AND LAMBS - The January 1, 1985 inventory of all sheep and lambs was unchanged from a year earlier as a decline in the number of stock sheep was offset by an increase in the number of sheep and lambs on feed. The 690,000 sheep and lambs on hand at the beginning of 1985 included 390,000 stock animals and 300,000 sheep and lambs on feed. Wool production during 1984 totaled 6,690,000 pounds, 14 percent below a year earlier. The inventory value of all sheep and lambs was 41,055,000 on January 1, 1985, up 20 percent from the previous year.

HOGS AND PIGS - The December 1, 1984 inventory of all hogs and pigs in Colorado totaled 210,000 head, 19 percent below the 260,000 on hand the previous year. The inventory of market hogs was down 17 percent to 190,000 head, and the breeding stock inventory of 20,000 head was down 33 percent. The December 1, 1984 inventory value of all hogs and pigs totaled $17,430,000, down 6 percent from the 1983 value.

CHICKENS AND EGGS - The state's inventory of 3,175,000 chickens of all ages on hand as of December 1, 1984 was 5 percent above the comparable number a year earlier. Hens and pullets of laying age represented 83 percent of the total inventory and were up 5 percent from 1983. The number of pullets not yet of laying age was also 5 percent above the previous year. During the period, December 1983 through November 1984, Colorado's laying flock produced 637 million eggs, up 3 percent from the comparable period a year earlier. The December 1, 1984 inventory of chickens of all ages was valued at $5,874,000 compared with an inventory value of $6,191,000 a year earlier.

[1] Excludes farm slaughter.

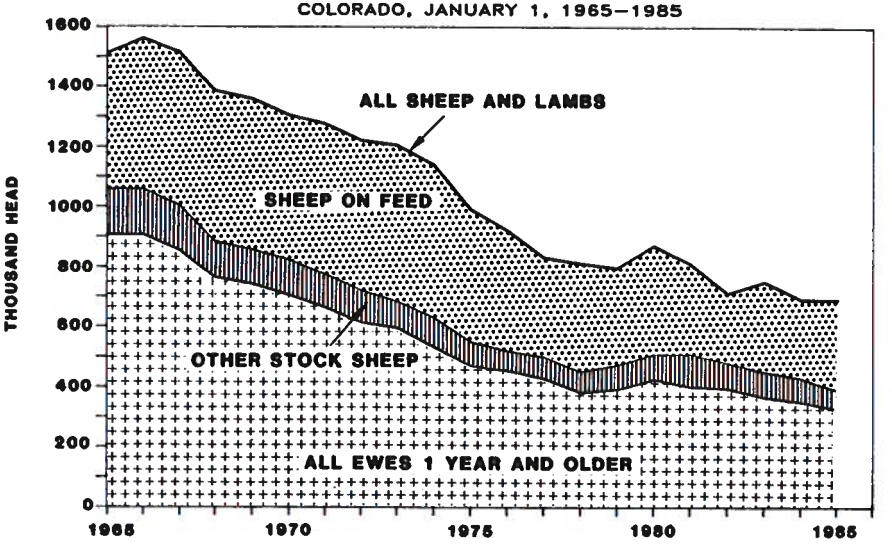
[2] Less than 50 head.

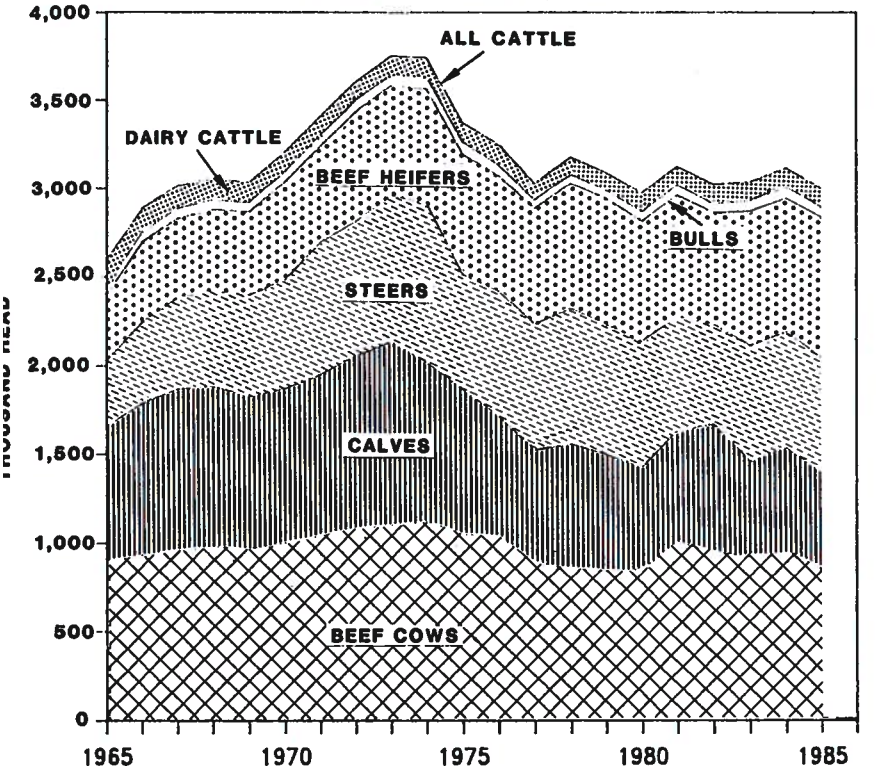
SHEEP & LAMBS ON FARMS

COLORADO, JANUARY 1, 1965–1985



CATTLE AND CALVES ON FARMS

COLORADO, JANUARY 1, 1965–85



PASTURE AND RANGE FEED CONDITION

Pasture and range feed condition data are obtained by means of a general survey of Colorado farmers and ranchers. Historically, collection of these data began in October 1922 and continued for each month of the year through 1960. Beginning in 1961, data were collected only from April through December, and in 1982 the December 1 survey was discontinued.

The pasture and range feed report, which is published in the U.S. Department of Agriculture's monthly Crop Production report about the 10th of each month, provides information on the grazing condition of non-irrigated pastures and ranges throughout Colorado and other major grazing states. Condition is expressed as a percent indicating the current supply of feed relative to that expected from existing stands under favorable weather conditions. Forage growth is highly related to the availability of soil moisture as indicated by the following ratings applied to condition ranges: 80% or more, good to excellent; 65-79%, poor to fair; 50-64%, very poor; 35-49%, severe drought; under 35%, extreme drought.

Millet for grain: 4, 8, 13-15

Oats:
Acreage 4, 8, 11, 13-15, 64-71
Cash receipts 124, 125
County estimates 66-71
District estimates 64, 65
Prices 8, 13-15, 19, 118
Production 8, 11, 13-15, 64-71
Stocks 108
Value 8, 13-15, 19
Yield 8, 11, 13-15, 64-71

Onions: 112, 118, 125

Pasture and Range condition: 135

Peaches: 110, 125

Pears: 110, 125

Potatoes:
Acreage 4, 13-15, 102
Cash receipts 124, 125
County estimates 102
Disposition 103
Prices 7, 13-15, 19, 118, 120
Production 7, 13-15, 102
Stocks 103
Value 7, 13-15, 19, 20-30
Yield 7, 13-15, 102

Poultry:
Cash receipts 124, 125, 157
Estimates 157, 158
Production index 3
See also - Chickens, turkeys

Precipitation: 115

Prices received:
By month 119-121
Season average prices 118

Rye:
Acreage 4, 8, 13-15
Cash receipts 124
Prices 8, 13-15, 60, 118
Production 8, 13-15
Value 8, 13-15
Yield 8, 13-15

Sheep & lambs:
Cash receipts 124, 125
Disposition 132
Inshipments 131, 132
Inventory by class 127, 129
Inventory by county 141
Inventory by district 140
Inventory, state 127, 129, 158
Lamb crop 127, 132
Marketings 131, 132
Number shorn 131
On feed 127
Prices 118, 121
Production 132
Slaughter 132, 133
Value 158

Slaughter, livestock: 133

Sorghum, all: 4, 13-15

Sorghum, forage: 6, 13-15, 73

Sorghum, grain:
Acreage 6, 11, 13-15, 26, 27, 72-76
Cash receipts 124, 125
County estimates 74, 76
District estimates 72, 73
Prices 6, 13-15, 18, 118
Production 6, 11, 13-15, 72-76
Stocks 107
Value 6, 13-15, 18
Yield 6, 11, 13-15, 72-76

Sorghum, silage: 6, 13-15, 73

Sugar beets:
Acreage 4, 7, 13-15, 82, 83
Cash receipts 124, 125
County estimates 83
District estimates 82
Prices 7, 13-15, 18, 118
Production 7, 13-15, 83
Value 7, 13-15, 18, 20-30
Yield 7, 13-15, 83

Sweet corn: 111, 125

Tomatoes: 111, 125

Turkeys:
Cash receipts 124, 125
Number raised 127, 156
Prices 118, 156
Value 156

Vegetables:
Acreage 4, 111
Cash receipts 124, 125
Planting & harvest dates 114
Prices 111, 118
Production 111
Production index 3
Review 109
Value 111
Yield 111

Wheat, all:
Acreage 4, 5, 10, 13-15
Cash receipts 124, 125
Prices 5, 13-15, 16, 118, 119
Production 5, 13-15, 20-30
Stocks 106
Value 5, 13-15, 16, 20-30
Yield 5, 13-15

Wheat, spring:
Acreage 5, 10, 13-15, 39-43
County estimates 41-43
District estimates 39, 40
Prices 5, 13-15, 16
Production 5, 10, 13-15, 39-43
Value 5, 13-15, 16
Yield 5, 10, 13-15, 39-43

Wheat, winter:
Acreage 5, 10, 13-15, 31-38
County estimates 33-38
District estimates 31, 32
Prices 5, 13-15, 16
Production 5, 10, 13-15, 31-38
Value 5, 13-15, 16
Varieties 104, 105
Yield 5, 10, 13-15, 31-38

Wool:
Cash receipts 124, 125
Prices 118, 120, 131
Production 131
Value 131

WHY CROP AND LIVESTOCK REPORTS

A man's judgment is no better than his facts, and crop and livestock reports are the basic facts of Agriculture.

They aid farmers in planning their production and marketing.

They are essential in enacting wise legislation affecting Agriculture.

They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.

They are the basis for analysis of agriculture and other business conditions.

They give producers the same foresight to future price trends that organized dealers possess.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools and others in planning constructive programs, and the prospective purchaser of land.

They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no official reports.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They indicate potential buying power thereby enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than he could with uncertain demand.

They reduce the risk of ownership of buyers of farm products which enables them to do business on a smaller margin. Under the stimulus of competition, they pay producers higher prices than could be paid if uncertainty of production existed.

They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased official crop reports reduce uncertainty which limits speculation.

They are indespensable in times of war because food is as essential as ammunition and weapons of war.

They provide an accurate, unbiased picture of Colorado's agriculture. The facts on present and prospective supplies furnish a sound basis for judgment and action by farmers, other individuals, business men, railroads, crop and livestock interests and governmental agencies.
