**Issued: February 9, 2010**

This report provides the results of the Winter Wheat Seedings by Variety Survey, 2010 Crop, conducted by the National Agricultural Statistics Service. Responses were tabulated from 1,181 winter wheat producers throughout Colorado covering 28 percent of the estimated 2.4 million acres seeded for the 2010 crop. The survey was not sampled to provide a direct expansion of the seeded acreage by variety or a measure of the sampling error. While a sufficient number of responses were tabulated to identify the major varieties of winter wheat for the state and major districts, the varietal percentages at the county level may not be adequately represented.

**Hatcher** was again the most popular variety seeded in Colorado, planted on 26.5 percent of the acreage for the 2010 crop compared with 32.9 percent for the 2009 crop. **Ripper** jumped to the second most popular variety from forth place last year by accounting for 12.5 percent of the acreage, up from 6.8 percent for the 2009 crop. **TAM 111** continued to hold third place for the 2010 crop by accounting for 7.5 percent of the acres seeded compared with 8.0 percent for 2009. **Jagalene** fell from second to the fourth place ranking this year with 6.8 percent of the acreage compared with 8.4 percent of last year’s crop. **Prairie Red** maintained fifth place with 5.6 percent of the acreage, the same percentage attained last year.. The top five varieties accounted for 58.9 percent of the acreage seeded. The top five varieties seeded for the 2009 crop accounted for 61.7 percent of the total acreage

**Bond CL** continued as the sixth leading variety with 4.9 percent of the acreage seeded, up slightly from 4.8 percent last year. **Jagger** shared the seventh place ranking with **Above** this year as both varieties accounted for 3.2 percent of the acreage. **Akron and Ankor** summarized together accounted for 2.6 percent of the acreage seeded, down from 2.8 percent last year. **Bill Brown** climbed to tenth place with 2.5 percent of the acreage seeded compared with only a minor amount reported last year.

These 10 varieties represented 75.3 percent of the state's total acreage seeded for the 2010 crop. In 2009 these top ten varieties accounted for 76.5 percent of the total seeded acreage.

Winter Wheat: Percent Planted by Variety, Colorado, 2003-10 1/
