Crop Emergence Assisted by Rainfall

For the week ending, October 23, 2011, the days suitable for fieldwork were 4.8 days in Delaware and 5.7 days in Maryland. Topsoil and subsoil moisture levels were mostly adequate. A Delaware crop reporter responded, “Rain received earlier in the week should help with topsoil moisture and the emergence of small grains and cover crops.” A Maryland crop reporter responded, “Mid-week rain slowed harvest and small grain planting. Good progress made on soybeans.”

The fourth cutting of alfalfa hay was 76 percent complete and 89 percent complete for Delaware and Maryland, respectively. Other hay progress in Delaware was 97 percent complete for the third cutting and 60 percent complete for the fourth cutting. The Maryland third and fourth cuttings of other hay were 91 percent and 34 percent complete, respectively. Corn for grain was 88 percent harvested in Delaware and 74 percent harvested in Maryland. In Delaware, 98 percent of soybeans had turned color, 95 percent had dropped leaves, and 17 percent were harvested. Maryland soybean progress was 92 percent turned color, 72 percent dropped leaves, and 21 percent harvested. Delaware barley planting was 80 percent complete and Maryland was 72 percent complete. Winter wheat planting was 54 percent complete in Delaware and 32 percent emerged. Maryland winter wheat planting was 60 percent complete and 32 percent emerged. Apples were 97 percent harvested in Delaware and 94 percent harvested in Maryland.
