

Florida Citrus Harvesting Season

U.S. and Florida Production

U.S. citrus utilized production for the 2013-2014 season totaled 9.4 million tons, down 15 percent from the 2012-2013 season. Florida accounted for 59 percent of total United States citrus production, while California totaled 37 percent, and Texas and Arizona combined produced the remaining 4 percent. Total utilized citrus production was down from the previous year in all citrus reporting States except Arizona, which was unchanged.

Florida's share of U.S. citrus production was 124.0 million boxes in the 2013-2014 season, down 21 percent from the previous season's 156.2 million boxes. Production decreased for all citrus varieties when compared to last season.

Florida's all orange production decreased by 22 percent to 104.6 million boxes. All grapefruit production is down 15 percent to 15.7 million boxes. Production of Honey tangerines is down 16 percent and early tangerine production is down 8 percent, resulting in a 12 percent decrease in all tangerines. Tangelo production is down 12 percent.

Production by Area and County

Each production area and county showed a decrease in citrus production compared to 2012-2013. The top 5 citrus producing counties were Polk (19.9 million boxes), Hendry (16.3 million boxes), Highlands (14.9 million boxes), DeSoto (13.7 million boxes), and Hardee (10.5 million boxes). Polk County had the largest loss in production (4.7 million boxes). By percentage, Sarasota County had the greatest decrease, with 46 percent fewer boxes produced. By production area, the Western area showed the greatest loss in both actual production (10.1 million boxes) and percentage (25 percent fewer boxes), while the Indian River changed the least, with a decrease of 1.1 million boxes.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Value

The value of the 2013-2014 United States citrus crop was up 7 percent from last season, at \$3.39 billion (packinghouse-door equivalent). Orange value of production decreased 5 percent from last season while grapefruit value is down 10 percent. Tangerine and mandarin value of production is 27 percent higher than last season and lemon value of production is up 62 percent. Tangelo value decreased 24 percent from the previous season.

Florida's \$946 million preliminary on-tree value of the 2013-2014 citrus crop is 19 percent less than the revised value of \$1.16 billion for 2012-2013. The price per box is higher for oranges, white grapefruit, and tangerines, but lower for colored grapefruit and tangelos. Only the tangerines have a higher value this season.

Citrus Value of Sales On-Tree by Crop Year – Florida: 2004-2005 through 2013-2014

Crop year	Value ¹ (1,000 dollars)	Crop year	Value ¹ (1,000 dollars)

¹ Excludes lemons.

² Revised.

³ Preliminary.

Foreign Exports

Fresh fruit exports totaled 7.8 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit exports. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 12.3 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 2.9 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2013-2014 season.

Frozen Concentrate

Final Frozen Concentrated Orange Juice (FCOJ) yield, as reported by the Florida Department of Citrus, was 1.569080 gallons per box of 42° Brix concentrate. A record FCOJ yield of 1.673141 was set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.521318 gallons per box. The late crop yielded 1.642463 gallons per box.

The final Frozen Concentrated Grapefruit Juice (FCGJ) yield was 1.213862 gallons per box of 40° Brix concentrate, down slightly from last season's final of 1.218634 gallons per box. A record FCGJ yield of 1.364660 gallons was set in 2006-2007.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.383379 gallons per box of 42° Brix concentrate was lower than last season's final of 1.469707 gallons per box. A record FCTJ yield of 1.757423 gallons was set in the 1992-1993 season.

Tree Inventory

Results of the annual Commercial Citrus Inventory show total citrus acreage is 515,147, down 2 percent from the last survey and the lowest in a series which began in 1966. Compared to the previous inventory, new plantings increased but the higher gross loss resulted in a net decrease of 9,493 acres.

Of the 29 counties included in the survey, 22 recorded decreases in acreage, 6 showed increases, and 1 was unchanged. St. Lucie County, down 3,869 acres, has suffered the greatest loss this year, while Martin lost the highest percentage with a 27 percent reduction. Desoto County has recorded gains in the last 7 surveys and this year's gain of 917 acres is the most of any county. Polk remains the leader with 81,810 acres.

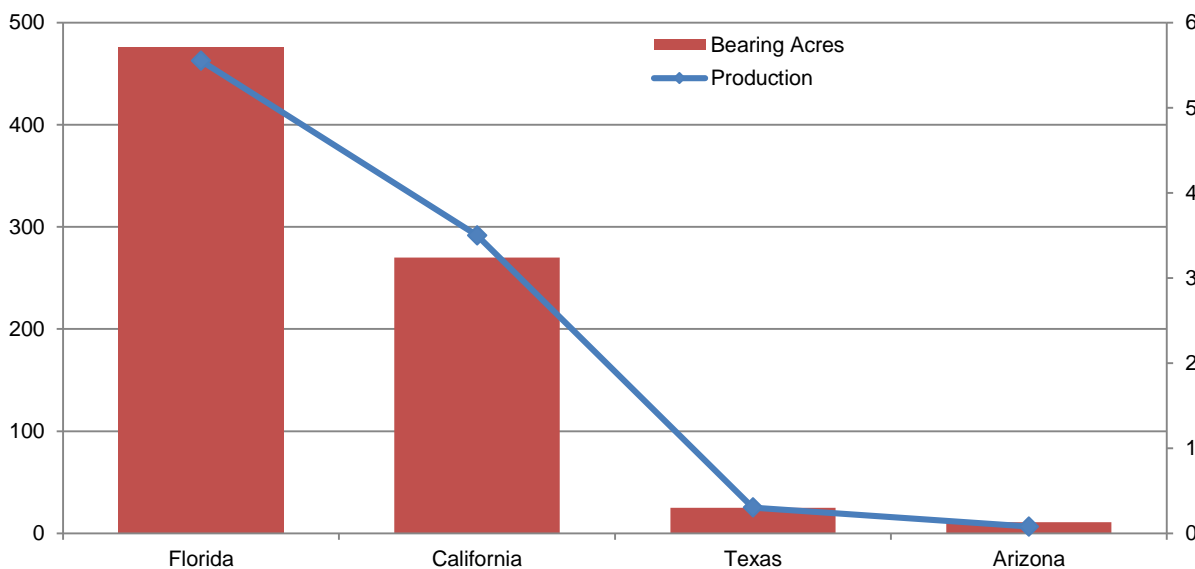

Orange acreage declined for the tenth consecutive survey to 452,364, replacing the record low of 459,311 acres tallied last year. Grapefruit acreage fell to a new low of 45,922. Specialty acreage continued to decline to a record low of 16,861 and represents only 3.3 percent of the total citrus acreage.

Total citrus trees have declined steadily from the peak in 1998 to 68.1 million. Polk continues to lead with 10.0 million trees, followed by Hendry with 9.5 million, DeSoto with 8.9 million, and Highlands with 7.9 million trees. The total is composed of oranges, 89 percent; grapefruit, almost 8 percent; and the remainder, including specialty and other citrus, at nearly 4 percent. Bearing trees decreased about 2 percent to 62.9 million while non-bearing trees increased over 15 percent to nearly 5.2 million since the previous survey

Avocados in Florida

Florida avocado bearing acreage, yield per acre, production, price per bushel, and value of production data are not available for the 2012-2013 crop year due to temporary USDA program cuts. The 2013-2014 production of Florida avocados decreased 15,000 bushels, or 1 percent, when compared to the 2011-2012 harvest season. Bearing acreage is estimated at 7,000 acres, down 5 percent from 2011-2012, and the least since the 2007-2008 season. The price per bushel is \$21.89, up 5 percent from the 2011-2012 crop year. Total value of crop production is \$24.4 million, an increase of 4 percent from the 2011-2012 season.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier counties. Florida avocados have a lower fat content than those from other states and countries, are typically larger than avocados from California, and are available from June through the end of February.
