## FLORIDA AGRICULTURE BY THE NUMBERS

Florida Department of Agriculture  
and Consumer Services

DEAR FRIENDS OF AGRICULTURE,

Florida agriculture has faced its fair share of challenges over the last year, including severe freezes in January 2010 and December 2010. Yet, Florida agriculture has proven to be an economic engine that never fails.

Florida's 47,500 farms produce nearly 300 different commodities on more than 9.2 million acres of land. Florida agriculture employs three quarters of a million people and contributes more than \$100 billion to our state's economy annually.

2010 was a record year for many commodities. Strawberries increased cash receipts by \$49 million, bell peppers earned an additional \$97 million and tomatoes saw an increase of \$110 million.

Find these figures and much more in Florida Agriculture By the Numbers. This publication, produced by the Florida Department of Agriculture and Consumer Services, is a compilation of useful data, details and information that summarizes Florida's agricultural impact to our state.

Collectively, these figures demonstrate the impact of Florida agriculture, an industry that feeds and enriches the lives of millions of people in Florida, the United States and throughout the world.

Sincerely,

A handwritten signature in black ink, which appears to read "Adam H. Putnam". The signature is fluid and cursive.

ADAM H. PUTNAM  
COMMISSIONER OF AGRICULTURE

## ACKNOWLEDGMENT

The acreage, production and value statistics in this publication are the official State and USDA estimates prepared by the National Agricultural Statistics Service (NASS), Florida Field Office in cooperation with the Florida Department of Agriculture and Consumer Services (FDACS). These estimates are current as of May 2011 and may be revised later in the year or in the following year, if additional data becomes available. Any revisions made to these estimates, as well as estimates made after May 2011, are included in reports posted to the website shown below and available from the NASS Florida Field Office.

Most of the data used to develop these estimates were provided voluntarily by growers, shippers, and processors and we sincerely appreciate their public-spirited cooperation. The Florida Tomato Committee, the Florida Fruit and Vegetable Association, floriculture and nursery producers, sales agencies, and transportation firms have provided valuable assistance and data throughout the season. The FDACS Bureau of State Farmers Markets and the County Agricultural Agents of the University of Florida Cooperative Extension Service were also very helpful in supplying area and county estimates.

The individuals and organizations who make up the Florida agricultural industry need reliable and accurate estimates of production to make informed and knowledgeable decisions. Increasing unpredictability of commodity prices and competition from global markets, make accurate and unbiased estimates even more important. Farmers, agribusinesses, producers' groups, educators, researchers, legislators and the media all need these estimates to develop sound policies and to promote Florida agricultural products.

I want to express my sincere gratitude to our dedicated staff of statisticians, support personnel, and field and telephone enumerators. They are the ones who have worked hard to collect, review and summarize these important data and publish the results.

All NASS reports are available free of charge at:

- [www.nass.usda.gov/fl](http://www.nass.usda.gov/fl) (Florida reports)

Jeff Geuder  
Director, USDA/NASS – Florida Field Office

# Florida Agriculture By The Numbers

The Florida Agriculture By The Numbers has been published to provide you with reliable, comprehensive information and data on Florida agriculture. People worldwide use the basics of food, fiber and forestry products daily. Florida's producers contribute mightily to the bounty enjoyed in Florida, the United States and beyond. The following pages tell their story of productivity, innovation and delivery.

This reference book is divided by sections for ease of use. The Agricultural Overview Section provides a general overview of Florida agriculture. The Agricultural Statistics Section presents comparative performances of major commodity groups and benchmark economic data.

Occasionally, numbers in rows or columns do not sum exactly. This usually occurs when large numbers are abbreviated or when composite prices are compiled. The difference in these cases is a rounding margin. The rounding of numbers occurs in these pages when space is a consideration.

The Groups Directory Section offers contact information for a variety of agricultural related entities. Both public and private organizations are listed. The Department Contacts Section identifies the Florida Department of Agriculture and Consumers Services' divisions with contact information.

Together, these sections provide a view of Florida agriculture and its impact on Florida's economy. If you need additional information, please call the Division of Marketing and Development at 850-488-4366.

We are pleased to present the Florida Agriculture By The Numbers. This book will provide excellent reference data year round. Keep it handy.

The Editorial Staff

## FLORIDA AGRICULTURAL OVERVIEW

Florida's 47,500 **commercial farms**, utilizing 9.25 million **acres**, continue to produce a wide variety of safe and dependable food products. From the **citrus groves** and the **nurseries** in central and southern Florida, to the **vegetables** in various regions around the State, to the **cattle and calves** throughout the State, these farms provide Florida with a large and stable economic base.

In 2010 Florida ranked:

1<sup>st</sup> in the U.S. in the value of production of **oranges, grapefruit, and sugarcane for sugar and seed.**<sup>1/</sup>

1<sup>st</sup> in value of production of **fresh market snap beans, cucumbers for fresh market, bell peppers, squash, sweet corn, fresh market tomatoes, and watermelons.**

2<sup>nd</sup> in value of production of **cucumbers for pickles, strawberries, and tangerines.**

4<sup>th</sup> in value of production of **honey.**

In 2010, in terms of total value of production, Florida accounted for:

**72** percent of the total U.S. value for **grapefruit** (\$207 million)

**62** percent of the total U.S. value for **oranges** (\$1.2 billion)

**52** percent of the total U.S. value for **sugarcane for sugar and seed** (\$551 million)<sup>1/</sup>

**46** percent of the total U.S. value for **bell peppers** (\$296 million)

**45** percent of the total U.S. value for **fresh market tomatoes** (\$631 million)

**44** percent of the total U.S. value for **snap beans** (\$135 million)

**28** percent of the total U.S. value for **squash** (\$57 million)

**25** percent of the total U.S. value for **sweet corn** (\$189 million)

**25** percent of the total U.S. value for **cucumbers for fresh market** (\$48 million)

**23** percent of the total U.S. value for **watermelons** (\$113 million)

**22** percent of the total U.S. value for **tangerines** (\$61 million)

Florida citrus growers in 2009-2010 produced 133.7 million boxes of **oranges** (96 percent of which were used for **orange juice**) and 20.3 million boxes of **grapefruit** (54 percent of which were used for **grapefruit juice**). Fruit sales exceeded \$1.9 billion.

Florida growers harvested **vegetables for fresh market** from 176,000 acres in 2010, with sales exceeding \$1.5 billion.

Income from **sugarcane** production exceeded \$400 million.

**Livestock and products** in 2010 produced cash receipts of \$1.3 billion. **Poultry farms** generated \$303 million in sales, with \$151 million coming from **broilers** and \$151 million coming from **eggs**. On January 1, 2011 there were 1.63 million **head of cattle** on farms and ranches in Florida, including 926,000 head of **beef cows** and 114,000 head of **milk cows**. Florida ranked 13<sup>th</sup> in the number of **chickens** on farms in 2010. Florida's poultry farmers maintained an average of 9.5 million **layers** in 2010 (producing 2.6 billion **eggs**) and produced 51.7 million **broilers**.

The total cash receipts for **nursery and greenhouse** products in Florida was just over \$1.6 billion in 2009.

<sup>1/</sup> Data for 2009, the latest year available.

# FLORIDA CASH RECEIPTS

## FLORIDA CASH RECEIPTS – 2009

The Economic Research Service, (ERS), USDA, reports that receipts from Florida agricultural products in 2009 amounted to \$7.10 billion. This is a decrease of \$752 million from last year. Cash receipts from all crops were \$6.00 billion, a decrease of \$467 million from 2008.

All crops accounted for 84.5 percent of total cash receipts. As in previous years, the leading crop commodities were oranges (18.8 percent of all cash receipts), foliage and floriculture (9.8 percent), tomatoes (7.3 percent), and sugarcane (5.7 percent). The leading livestock commodities were cattle and calves (5.3 percent of all cash receipts), dairy products (4.9 percent), and poultry and eggs (3.8 percent).

## FLORIDA AGRICULTURE CASH RECEIPTS, 2009

# FARMS AND LAND IN FARMS

## FARMS AND LAND IN FARMS

Florida had 47,500 commercial farms in 2010, using a total of 9,250,000 acres. There were 5,400 farms with sales exceeding \$100,000. The average farm size was 195 acres. The number of farms in Florida has increased by 3,500 over the past 10 years. Florida ranks 19<sup>th</sup> among all States in number of farms and tied at 30<sup>th</sup> in land in farms.

### FLORIDA FARMS AND ACREAGE

By year and by economic sales class

Year	Number of farms				Total acres				Average farm size
	Total	\$1,000 - \$9,999	\$10,000 - \$99,999	\$100,000 & over	Total	\$1,000 - \$9,999	\$10,000 - \$99,999	\$100,000 & over

<b>NET FARM INCOME</b>	<b>1,927,166</b>	<b>1,466,506</b>	<b>1,280,982</b>

<sup>1/</sup> Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

### LEADING STATES IN NET FARM INCOME, 2009

# CITRUS

## 2009-2010 SEASON CITRUS HIGHLIGHTS

### U.S. AND FLORIDA PRODUCTION

Citrus utilized production for the 2009-2010 season in the United States totaled 10.9 million tons, down 8 percent from the 2008-09 season. Florida accounted for 65 percent of the total United States citrus production with 159.3 million boxes of citrus in the 2009-2010 season, California totaled 31 percent, and Texas and Arizona produced the remaining 4 percent.

Florida's total 2009-2010 citrus utilization decreased 16 percent from the previous season. Utilized citrus production in California increased 15 percent for the 2009-2010 season. Utilized citrus production in Texas was up 4 percent. Total citrus production in Arizona was down 27 percent from the previous season.

Florida's all orange production fell 18 percent to 133.6 million boxes. Navel production was 2.3 million boxes, down 23 percent from the previous 2 seasons and the lowest since 1985-1986. Grapefruit utilization in Florida, at 20.3 million boxes, was down 6 percent from the 2008-2009 season's utilization. Honey tangerine production at 2.2 million boxes was up 69 percent from the previous season's 1.3 million boxes, the lowest since 1994-1995.

### TREE INVENTORY

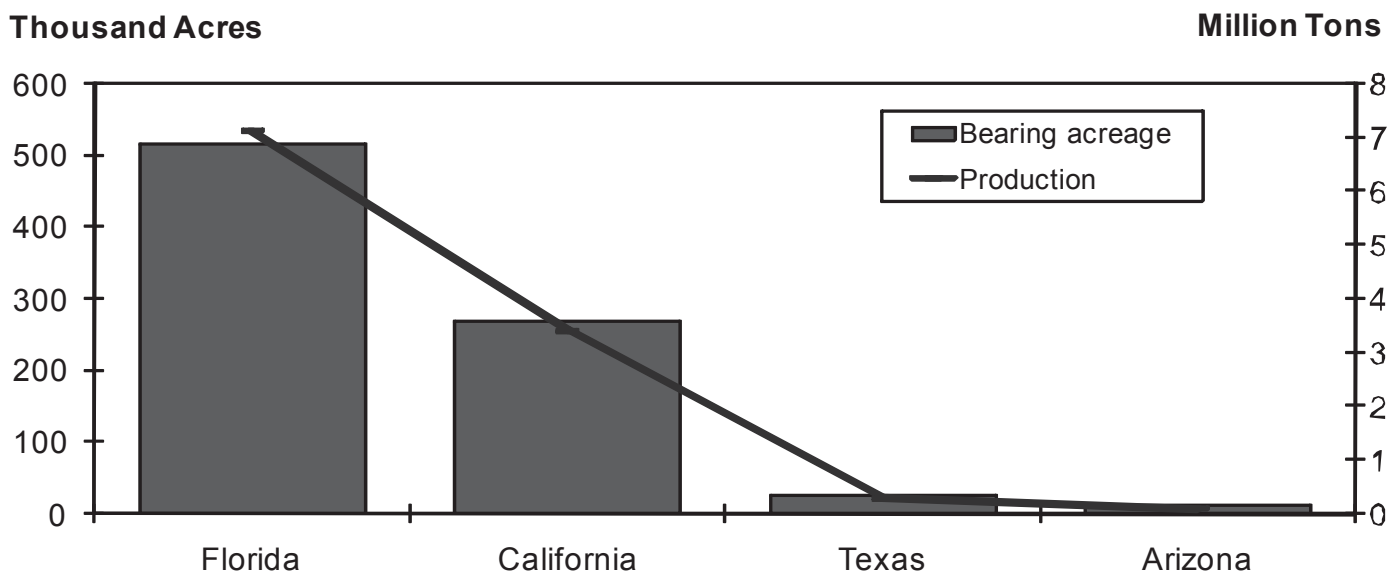

Results of the annual commercial citrus inventory show a net decrease of 14,777 total citrus acres, or 3 percent from the 2009 survey, to 554,037 acres of commercial citrus. The gross loss of 25,109 acres was larger and the new plantings of 10,332 acres were smaller compared to the previous inventory.

Since the year 2000, total acreage has declined 33 percent or 278,238 acres. The drop of nearly 12 percent of citrus trees since the 2006 tree inventory is a result of record cold temperatures, citrus canker, greening disease, and commercial development.

Of the 30 counties included in the annual citrus inventory, 23 recorded decreases and 7 showed increases in acreage. Martin County experienced the greatest loss in acreage at 4,386, while Palm Beach County had the highest percentage loss at 55 percent. Polk had the largest gain and continues to lead with the most acres at 83,471. Hendry is second with 66,814 acres while DeSoto and Highlands follow with over 62,000 acres each.

Total citrus trees are down 3 percent from 74,090,500 in 2009 to 72,164,800 in 2010. Hendry remains the leader with over 10.0 million citrus trees, followed closely by Polk with almost 10.0 million, DeSoto with 8.3 million, and Highlands with 8.0 million trees. Of the total, oranges comprise 88 percent; grapefruit, 8 percent; and the remainder includes specialty and other citrus at 4 percent. Since 2009, bearing trees decreased 3 percent to 67,655,800 while non-bearing trees decreased by less than 1 percent to 4,509,000.

### LEADING CITRUS STATES: BEARING ACREAGE AND PRODUCTION, CROP YEAR 2009-2010

## PRODUCTION BY AREAS AND COUNTIES

Total citrus production in 2009-2010 was down in all Florida commercial citrus production areas from the 2008-2009 season. The Southern and Western areas were down the most with decreases of 13.4 million and 7.4 million boxes respectively. The Northern area's decrease of less than 388,000 boxes was the smallest. The top 5 citrus producing counties were Polk (27.9 million), Highlands (21.6 million), DeSoto (18.0 million), Hendry (16.3 million), and Hardee (13.0 million). Losses were recorded in all counties with the exceptions of Hernando and Orange.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size and the distribution of the sample groves around the State used in these surveys are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

## VALUE

The value of the 2009-2010 United States citrus crop increased 5 percent from last season, to \$2.88 billion (packinghouse-door equivalent). Even though United States citrus production was lower than last season, higher prices for the majority of the citrus crops pushed crop values up. Orange value of production decreased 2 percent from last season while grapefruit value is up 28 percent. Tangerine and mandarin value of production is 33 percent higher than last season and lemon value of production is up 14 percent. Tangelo value increased 23 percent from the previous season.

Florida's \$1.055 billion (on-tree equivalent) preliminary value of the 2009-2010 citrus crop is almost 1 percent greater than the revised value of \$1.047 billion for 2008-2009. The price per box was higher for all varieties. White grapefruit and tangelos rebounded from last season's lower prices and on-tree values more than doubled. The all-tangerine value increased 73 percent. Only the orange on-tree values are lower.

### Citrus Value of Sales On-Tree-Florida: Crop Years 2000-2001 through 2009-2010

Crop year <sup>1/</sup>	Value	Crop year <sup>1/</sup>	Value
	<i>1,000 dollars</i>		<i>1,000 dollars</i>
2000-2001	862,031	2005-2006	1,024,610
2001-2002	966,803	2006-2007	1,499,112
2002-2003	787,378	2007-2008	1,283,994
2003-2004	891,500	2008-2009 <sup>2/</sup>	1,046,735
2004-2005	754,169	2009-2010 <sup>3/</sup>	1,054,716

<sup>1/</sup> Excludes lemons beginning in 2003-2004.

<sup>2/</sup> Revised.

<sup>3/</sup> Preliminary.

### Citrus Box Weights:

Approximate net weight by fruit type and states

State	Orange	Grapefruit	Tangerine	Lemon	Lime
	<i>pounds</i>				
FL	<sup>1/</sup> 90	85	95	90	88
CA	75	67	75	76	(X)
TX	85	80	(X)	(X)	(X)
AZ	75	67	75	76	(X)

(X) Not applicable.

<sup>1/</sup> Includes Temples and tangelos at 90 pounds.

## FOREIGN EXPORTS AND FROZEN CONCENTRATE

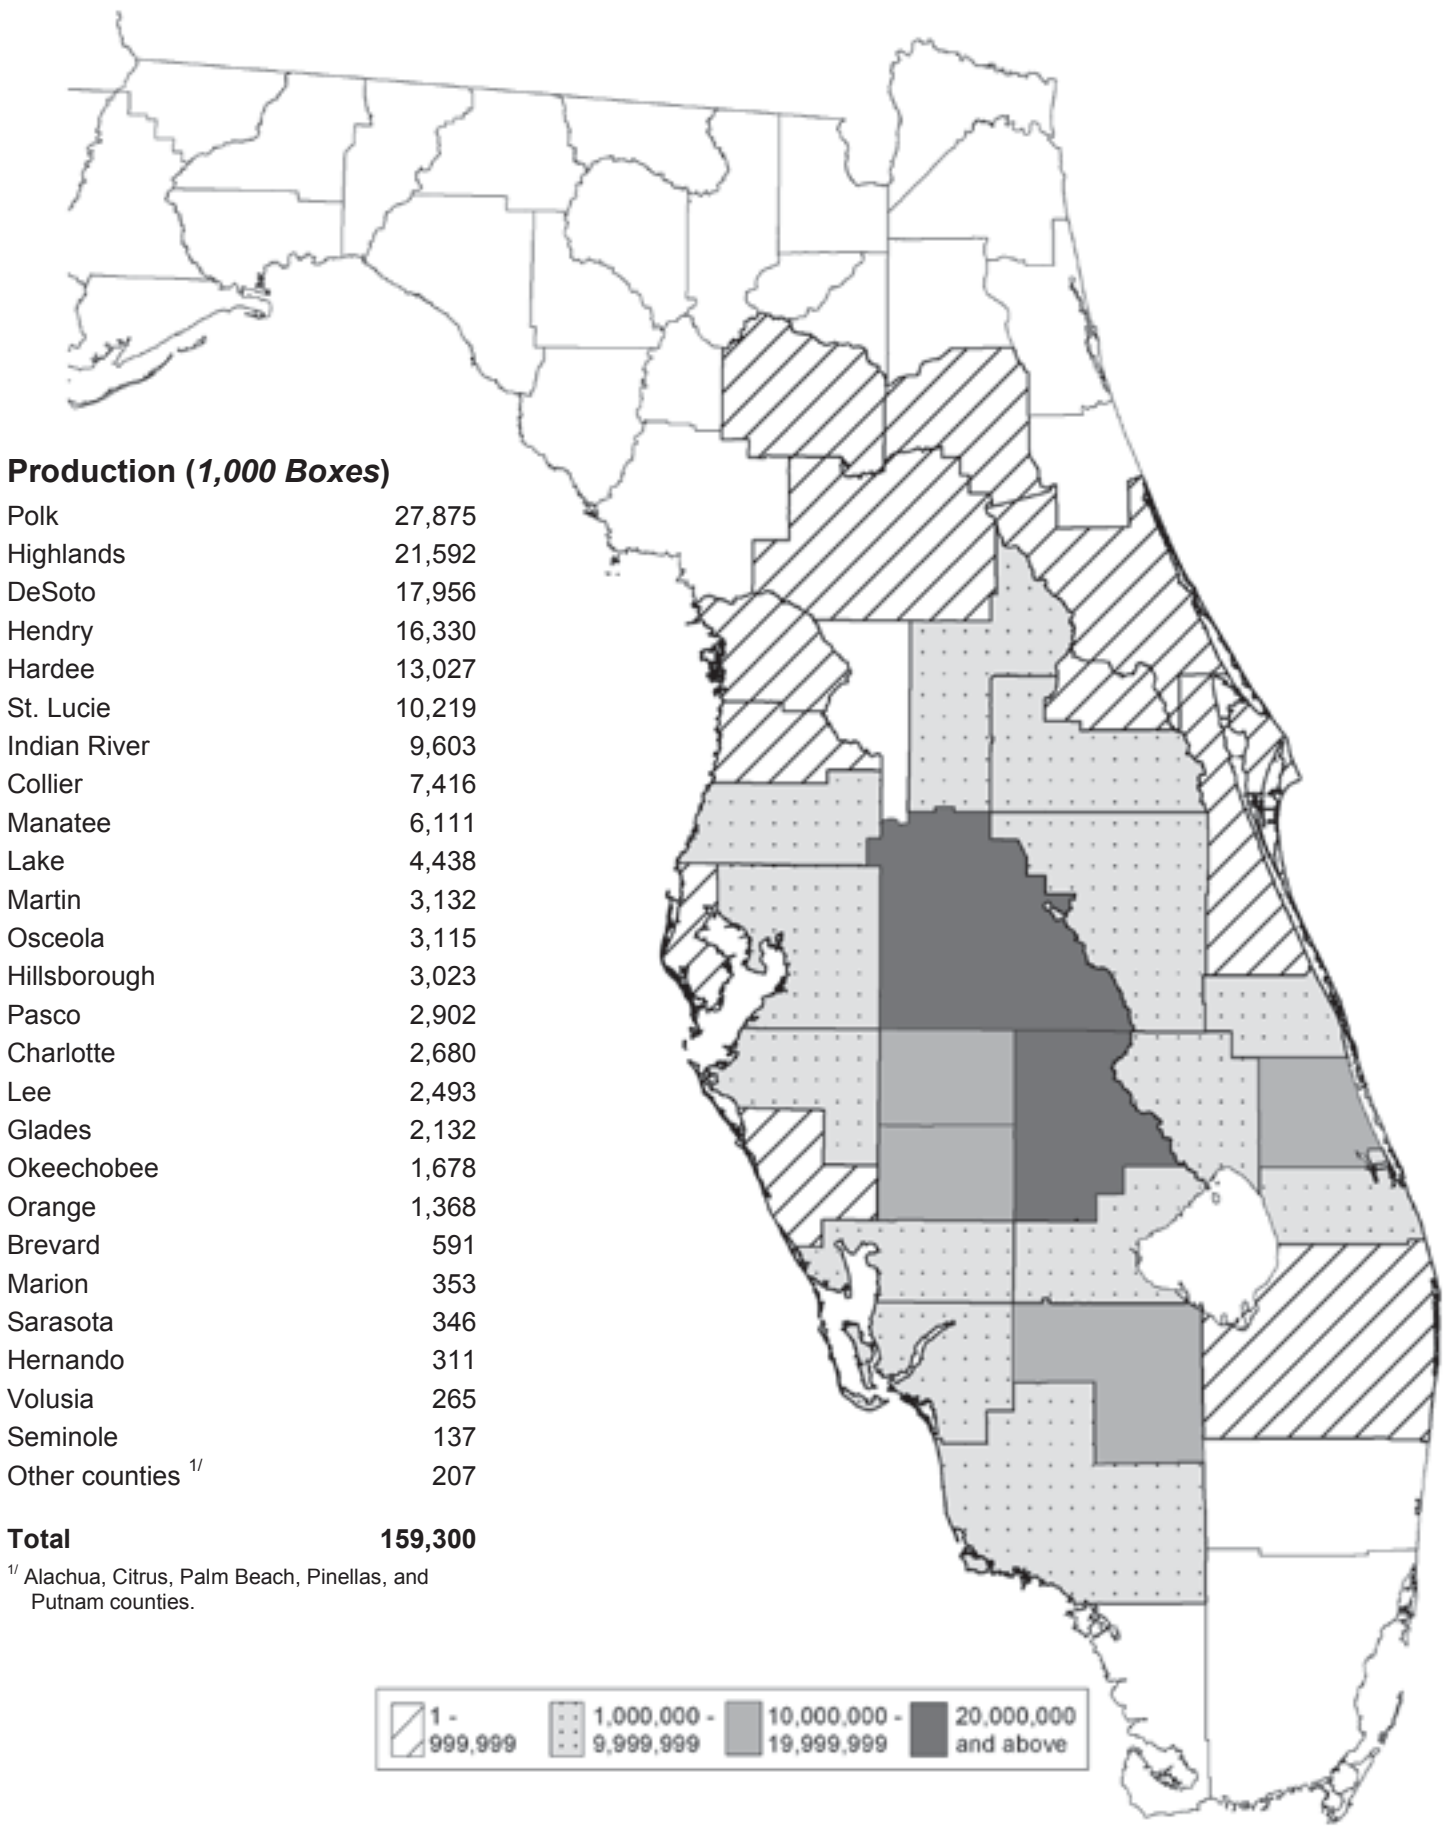

Fresh fruit exports totaled 12.4 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 16.0 million gallons of Frozen Concentrated Orange Juice (FCOJ) and 4.4 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2009-2010 season.

Final FCOJ yield, as reported by the Florida Department of Citrus, was 1.559677 gallons per box of 42° Brix concentrate, far below the record of 1.672737 set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.511083 gallons per box. The late crop yielded 1.625245 gallons per box.

The final FCGJ yield was 1.309023 gallons per box of 40° Brix concentrate, up from last season but lower than the 1.31020 gallons per box recorded in 2007-2008.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.438629 gallons per box of 42° Brix concentrate was lower than last season's final of 1.567257 gallons per box.

## FLORIDA CITRUS HARVESTING SEASON

## AVOCADOS IN FLORIDA

Production of Florida avocados decreased from the previous season by 170,000 bushels, or 15 percent. Bearing acreage is estimated at 7,400 acres, down 1 percent from last season. The price per bushel was \$15.00, up 25 percent from the previous season, bringing the value of crop production to \$13,920,000.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier counties. Florida avocados have a lower fat content than those from other states and countries, and are typically larger than avocados from California. They are available from June through the end of February.

# FIELD CROPS

## 2010 FIELD CROPS HIGHLIGHTS

### VALUE

The 2010 total value of production for corn, cotton and cottonseed, hay, peanuts, pecans, soybeans, and wheat totaled \$285.3 million compared with \$257.1 million in 2009, an 11 percent increase. The value of cotton at \$54.8 million and cottonseed at \$5.7 million increased 44 percent and 23 percent, respectively. The value of peanuts at \$91.3 million increased 35 percent from the previous year. The value of hay at \$108.3 million was down 5 percent from the previous year, corn at \$12.4 million was down 17 percent, and soybeans at \$7.6 million, was down 38 percent.

### ACREAGE AND PRODUCTION

Acreage harvested in 2010 for corn, cotton, hay, peanuts, soybeans, and wheat totaled 599 thousand acres, up 5.5 percent from the 568 thousand acres harvested in 2009. Harvested acreage increased for peanuts (30,000 acres), hay (20,000 acres), and cotton (11,000 acres). Harvested acreage decreased for corn (12,000 acres), soybeans (11,000 acres), and wheat (7,000 acres). Production increased for peanuts (37 percent), cotton (21 percent), and cottonseed (16 percent). Production decreased for wheat (53 percent), soybeans (47 percent), corn for grain (29 percent), pecans (28 percent), and hay (5 percent).

### SUGARCANE

Florida producers harvested 392 thousand acres of sugarcane for sugar and seed in 2010, up 1 percent from the 387 thousand acres harvested in 2009. Production in 2010 was 14,396 thousand tons, up 3 percent from the 13,939 thousand tons produced in 2009. The value of the 2009 crop was \$550.6 million dollars, up 38 percent from the value for the 2008 crop.

### CROP WEATHER

**January** began with abundant rains and seasonal temperatures. Some row crop fields remained to be harvested. The sugarcane harvest remained active. Planting of winter wheat was delayed by rain. Field preparations for potato planting got underway. As the month progressed, sub-freezing temperatures averaging 10 to 20 degrees below normal continued for nearly two weeks. Young sugarcane suffered freeze damage and older canes had the tops frozen. Growers rushed the final harvest to minimize sucrose loss. Forage crops such as rye and oats were damaged due to cold weather and flooding. Late January temperatures were above normal and rainfall provided adequate soil moisture.

**February** began with above normal temperatures and widespread showers that hindered fieldwork. At mid-month, temperature averaged 6 to 12 degrees below normal. Freezing temperatures were recorded as far south as Orlando, and snow fell across parts of the Panhandle. Significant amounts of rain fell over large areas of the State. Most fieldwork was delayed due to wet conditions except in the southern region. Growers replanted potato fields where freeze damage occurred. Producers began harvesting potatoes that escaped freeze damage in late February. The month ended with temperatures four to eight degrees below normal.

**March** had frequent rains and below average temperatures. Frost occurred several nights in a row in northern Florida. Mid-month temperatures continued to be below normal. Severe storms with high winds brought heavy rain to many areas and two to four inches of rainfall. The month concluded with below average temperatures and more heavy rains. The soil moisture ratings were mostly adequate to surplus. These cold, wet conditions hampered fieldwork preparation for field crops and leached fertilizers. Field preparation took place for peanuts and cotton, but planting was delayed until soils were dryer and warmer. Flooding in the Hastings area caused some potato fields to be replanted. The sugarcane harvest was completed. Corn planting was near completion at the end of the month.

**April** began with slightly below normal temperatures and rain across central and southern regions. Growers were busy preparing fields for peanuts, cotton, and soybeans. At mid-month, it rained across much of the State except

for northern counties. Near the end of the month substantial rainfall brought relief to dry conditions. Soil moisture levels were rated 85 percent adequate to surplus. Snap beans and sweet potatoes were planted in Miami-Dade County.

**May** began with warm temperatures and substantial rainfall which continued throughout most of the month. Peanut planting continued, but was delayed at mid-month by the heavy rains. Cotton planting was completed in some areas early in the month. Sugarcane producers were busy cultivating, fertilizing, and applying weed control. Harvesting of wheat and oats began at mid-month.

**June** began with rain and thunderstorms with high humidity. Mid-month temperatures were above normal and coupled with daily scattered showers. By mid-June the wheat harvest was almost completed and nearly all the peanuts harvested. The potato harvest was virtually complete in the Hastings area and growers reported a good season. Dry conditions stunted cotton growth later in the month.

**July** began with beneficial showers that gave some relief to above normal temperatures. The warm temperatures and sporadic showers continued throughout the month keeping soil moisture supplies rated at over 80 percent to surplus. Weed pressure was higher than average due to rains. Some disease problems were reported in cotton fields. Hay was harvested with a few interruptions from rain.

**August** began with dry conditions and temperatures rising to over 100 degrees in some areas. Areas that missed the showers dried quickly from the excessive heat and farmers ran irrigation to maintain soil moisture. Peanut and cotton fields showed significant stress. Rain during the last week of August provided some relief. Harvest of corn for silage was nearly complete by the end of the month.

**September** began with heavy rains in the central and southern areas. Northern areas missed the showers needed to aid crops. The peanut harvest was underway by mid-month. Fieldwork progressed with vegetable planting and cotton picking.

**October** began with above normal temperatures and varying precipitation. Mid-month temperatures were two to seven degrees cooler than normal. Little rain fell during the rest of the month and temperatures averaged above normal. Drought conditions were present across approximately 75 percent of the State. The peanut harvest continued ahead of schedule despite hard, dry soils that made harvesting difficult. The cotton harvest was in full swing by mid-month, and the corn harvest was nearly completed.

**November** began with warm dry, weather. The cotton, soybean, and peanut harvest was nearly completed by the first week in November. Mid-month showers brought temporary relief. At mid-month, a cold front set record lows in some localities. Dry conditions continued throughout the remainder of the month.

**December** began with dry conditions that were most severe in the northeast. A cold front brought frigid temperatures into the 20s that set record lows across the State. The cold weather continued through the end of the month. The sugarcane crop was damaged as the tops of older canes were frozen. Newly planted canes were burnt back to the ground from the hard freeze. Little precipitation fell during the month.

# Florida Agricultural Statistics Districts

# LIVESTOCK

## LIVESTOCK HIGHLIGHTS

### DAIRY

Florida dairies produced 2.13 billion pounds of milk in 2010, up from 2.08 billion pounds produced during 2009. Annual milk production per cow was 18,658 pounds, up from 18,070 pounds per cow in 2009. On January 1, 2011, there were 114,000 milk cows on Florida farms and commercial dairies, up from 112,000 milk cows a year earlier. The top ranking counties for dairy cattle on January 1, 2011, were Okeechobee, Lafayette and Gilchrist. Florida ranked 19th among States in number of milk cows.

Cash receipts from marketings of Florida milk in 2010 totaled \$439 million, up from \$350 million in 2009. In 2010, the peak price of replacement milk cows was \$1,450 per head in April. The annual average farm-gate price for milk in Florida was \$20.70 per hundredweight in 2010, up from \$16.90 in 2009.

### BEEF

All cattle and calves on Florida farms and ranches as of January 1, 2011, including dairy cattle, totaled 1,630,000 head, down 90,000 from 2010. The three top ranking counties for cattle were Okeechobee, Osceola, and Polk counties. Beef cows in Florida were 926,000 head, down 32,000 head from 2010. Nationally, Florida ranked 11th in beef cows and 19th in total cattle. Calves born during 2010 totaled 870,000, down 30,000 head from 2009.

Cash receipts from cattle and calf marketings were \$502 million, up from \$375 million in 2009. The average annual price of cattle marketed in Florida in 2010 was \$76.30 per hundredweight, up from \$67.30 per hundredweight in 2009. The average price for calves in 2010 was \$111.00 per hundredweight, up from \$93.70 per hundredweight in 2009.

### POULTRY

Hens and pullets of laying age on farms in December 2010 were 10.1 million birds, compared to 10.3 million birds in December 2009. Florida egg production from December 1, 2009 to November 30, 2010, was 2,592 million eggs, a decrease from the previous year's production of 2,670 million eggs.

The total value of Florida egg production in 2010 was \$151 million, down from \$153 million in 2009. The average annual price for eggs (hatching and table eggs, combined) was 69.8 cents per dozen, down from 68.6 cents per dozen in 2009. The value of broilers produced in Florida during 2010 totaled \$151 million, up from \$115 million a year earlier. The average annual price of broilers in 2010 was 48.0 cents per pound, up from 46.0 cents per pound in 2009.

Florida liveweight broiler production in 2010 totaled 314 million pounds, up from 252 million pounds produced in 2009. Broilers produced in Florida during 2010 totaled 57 million birds, up from 46 million birds in 2009. Broilers hatched in Florida were 57.2 million birds, up from 45.9 million birds in 2009.

### HOGS

The hog inventory in Florida on January 1, 2010, was 15,000 head. There were 33,000 head of hogs marketed in Florida in 2010, down from 58,000 head in 2009. There were 76,800 head slaughtered in 2010, down from 82,500 head in 2009. The average market year price in 2010 was \$55.10 per hundredweight, down from \$41.80 per hundredweight in 2009. Cash receipts from hogs in 2010 were \$2.79 million.

## VEGETABLES, MELONS AND BERRIES

## 2009-2010 SEASON VEGETABLE HIGHLIGHTS

### VALUE

The 2009-10 value of production for the seven major vegetable crops, potatoes, berries, and watermelons totaled \$2.09 billion, up 11 percent from the 2008-09 value of \$1.89 billion. Crops that increased in value included bell peppers (49%), tomatoes (21%), snap beans (20%), cabbage (16%), strawberries (15%), squash (10%), and potatoes (3%). Crops that decreased in value included cucumbers (-39%), sweet corn (-17%), watermelons (-17%), and blueberries (-6%). Increases in prices helped offset reduced production for bell peppers, cabbage, snap beans, squash, strawberries and tomatoes.

### ACREAGE AND PRODUCTION

The harvested acreage for the 2009-10 season of the seven major vegetable crops, watermelons, potatoes, sweet potatoes, strawberries and blueberries totaled 223,500 acres, down two percent from the 227,200 acres harvested the previous year. Crops with increased acreage included cabbage (2%), cucumbers (3%), potatoes (10%), squash (3%), sweet potatoes (6%) and blueberries (9%). Acreage for strawberries at 8,800 acres was unchanged from the previous year. Crops with less acreage included tomatoes (-14%), watermelons (-5%), bell peppers (-3%), snap beans (-2%) and sweet corn (-2%).

Despite the harvested acreage being down only two percent, production was down 13 percent due to adverse growing conditions. Production increased 26 percent for sweet potatoes, 21 percent for blueberries and three percent for potatoes. Major vegetables percentage decrease in production included tomatoes (-29%), cabbage (-20%), strawberries (-19%), cucumbers (-13%), sweet corn (-12%), peppers (-9%), snap beans (-9%), watermelons (-8%) and squash (-5%).

### WEATHER

In **January**, the year began with abundant rains and seasonal temperatures. Then sub-freezing temperatures, averaging 10 to 20 degrees below normal, continued for nearly two weeks. The strawberry harvest was greatly reduced and growers in south Florida reported losses to beans, squash and tomatoes. Late January temperatures were above normal and rainfall provided adequate soil moisture.

**February** began with above normal temperatures and widespread showers. At mid-month, temperature averaged 6 to 12 degrees below normal. Freezing temperatures were recorded as far south as Orlando, and snow fell across parts of the Panhandle. Significant amounts of rain fell over most of the State. Spring vegetable planting and field preparations were delayed by the cold weather and rain. Light volumes of vegetables moved through the market. Strawberries were recovering from the cold temperatures and the supply increased. The month ended with temperatures four to eight degrees below normal.

**March** had frequent rains and below average temperatures. Frost occurred several nights in a row in northern Florida. Mid-month temperatures continued to be below normal and hindered vegetable growth in many areas. Watermelons were in the ground for weeks without significant growth. Severe storms with high winds brought heavy rain to many areas. Production was below normal for cabbage, celery, sweet corn, endive, escarole, radishes and tomatoes. Vegetable growers laid plastic and drip irrigation systems to prepare for spring plantings. In the southern region, snap beans, cabbage and sweet potatoes were being harvested. The month concluded with below average temperatures and more rain.

**April** began with slightly below normal temperatures and rain across central and southern regions. Vegetable crop development and maturity were two to three weeks behind schedule from prolonged cold conditions. Cabbage production was below normal. Near the end of the month substantial rainfall brought relief to dry conditions, and soil moisture levels improved to 85 percent adequate to surplus.

**May** was a month of warm temperatures and substantial rainfall. Harvesting was underway for tomatoes, bell peppers, cantaloupe and watermelon, but shipments were light. In some growing areas, rain, heat and low prices stopped harvesting of vegetables. Farm labor was occasionally reported as scarce. In the central growing areas, tomatoes, sweet corn, watermelons and cantaloupes were being picked with good yields and quality. Sweet corn and peas were being planted.

**June** began with rain and thunderstorms. Mid-month temperatures were above normal and coupled with daily scattered showers. Hot, humid temperatures stressed vegetables. Most sweet corn growers completed harvesting the spring crop. Tomato harvesting was active in central and northern counties. Some growers suspended harvesting activities due to low prices. Heavy tonnage of watermelons was being harvested, but prices were low. Cantaloupe harvesting was near its peak and quality was good.

**July** had warm temperatures and sporadic showers that kept soil moisture mostly adequate to surplus. Tomato picking was nearing completion around the Quincy area and growers begin to prepare for the fall planting season. Northern Peninsula growers were still harvesting light supplies of watermelons as the season concluded. In the south, vegetable growers were preparing fields and laying plastic for fall crops.

**August** began with dry conditions and temperatures rising to over 100 degrees. Areas that missed the showers dried quickly from the excessive heat requiring irrigation to maintain soil moisture. Rain during the last week of August provided some relief. Producers prepared fields and laid plastic for fall vegetables.

**September** began with heavy rains in the central and southern areas. Northern areas missed the showers. Vegetable planting was in high gear from the northern to southern Peninsula areas.

**October** began with above normal temperatures and varying precipitation. Mid-month temperatures were two to seven degrees cooler than normal and delayed crop maturity. Light harvesting of cucumbers and squash was underway. Producers planted cabbage and prepared fields for planting strawberries. Little rain fell later in the month and temperatures averaged above normal. Drought conditions were present across approximately 75 percent of the State. Growers delayed planting some fall vegetables because the fields were too dry.

**November** began with warm, dry weather. Mid-month showers brought temporary relief. A mid-month cold front set record lows in some localities. Three nights of heavy frost coupled with unseasonably cold temperatures ended vegetable production in Washington County. Dry conditions continued throughout the remainder of the month. Vegetable harvesting gained momentum as growers tried to meet the Thanksgiving Day demand. Potato field preparations were in full swing in St. Johns County.

**December** began with dry conditions which continued throughout the month. A cold front brought frigid temperatures into the 20s and set record lows across the State. The cold weather continued through the end of the month. Vegetable producers covered plants with freeze cloths and ran overhead sprinklers for freeze protection. Some growers used helicopters to push warmer air closer to the ground. Strawberry growers irrigated to form ice caps on plants to save the plants and immature fruit. Highway truck restrictions were eased to allow vulnerable crops to be transported quickly to processors. Only light shipments of vegetables were available for marketing.

## DEFINITIONS AND EXPLANATIONS

**PLANTED ACREAGE** is the total acreage which has been planted for harvest during the crop year. Acreage lost and replanted to the same crop in time for harvest in the same quarter is counted only once. Acreage harvested and planted again to the same crop is counted twice.

**HARVESTED ACREAGE** is the acreage partially or completely harvested. Acreage lost before or at maturity through natural or economic causes is not included in the acreage for harvest.

**YIELD** is the average production per harvested acre of merchantable quality harvested and sold or utilized for human consumption.

**PRODUCTION** is the quantity actually harvested and sold or utilized for human consumption.

**UNIT VALUE** for fresh market sales is the equivalent price received, f.o.b. shipping point basis and encompasses all grades and sizes marketed or utilized. Included are packing charges, selling charges, precooling, top ice, or other costs which contribute to the value of the product at shipping point. The value per unit for quantities sold to processors is the average value paid for usable quantities, on a "delivered to plant door" basis. This value includes transportation and other normal costs incident to delivery at plant door.

**TOTAL VALUE** is the equivalent value of production sold or utilized based on the unit value. Cullage and other quantities not sold or utilized because of natural or economic factors are excluded.

**OTHER COUNTIES** include harvested acreage for all counties for which either published data would result in the disclosure of individual operations or acreage totals for specific commodities of minor importance in the State.

**PRODUCTION AND PRICE UNIT**--The official USDA vegetable crop estimates are published on a weight basis. For this bulletin, the official estimates for most vegetable crops have been converted to what is believed to be the most commonly used containers. If changes in container weights are necessary, all data pertaining to the production of the commodity in question are revised to maintain comparability between years. The table below gives the net weight used per container and the number of containers per hundredweight for Florida produce.

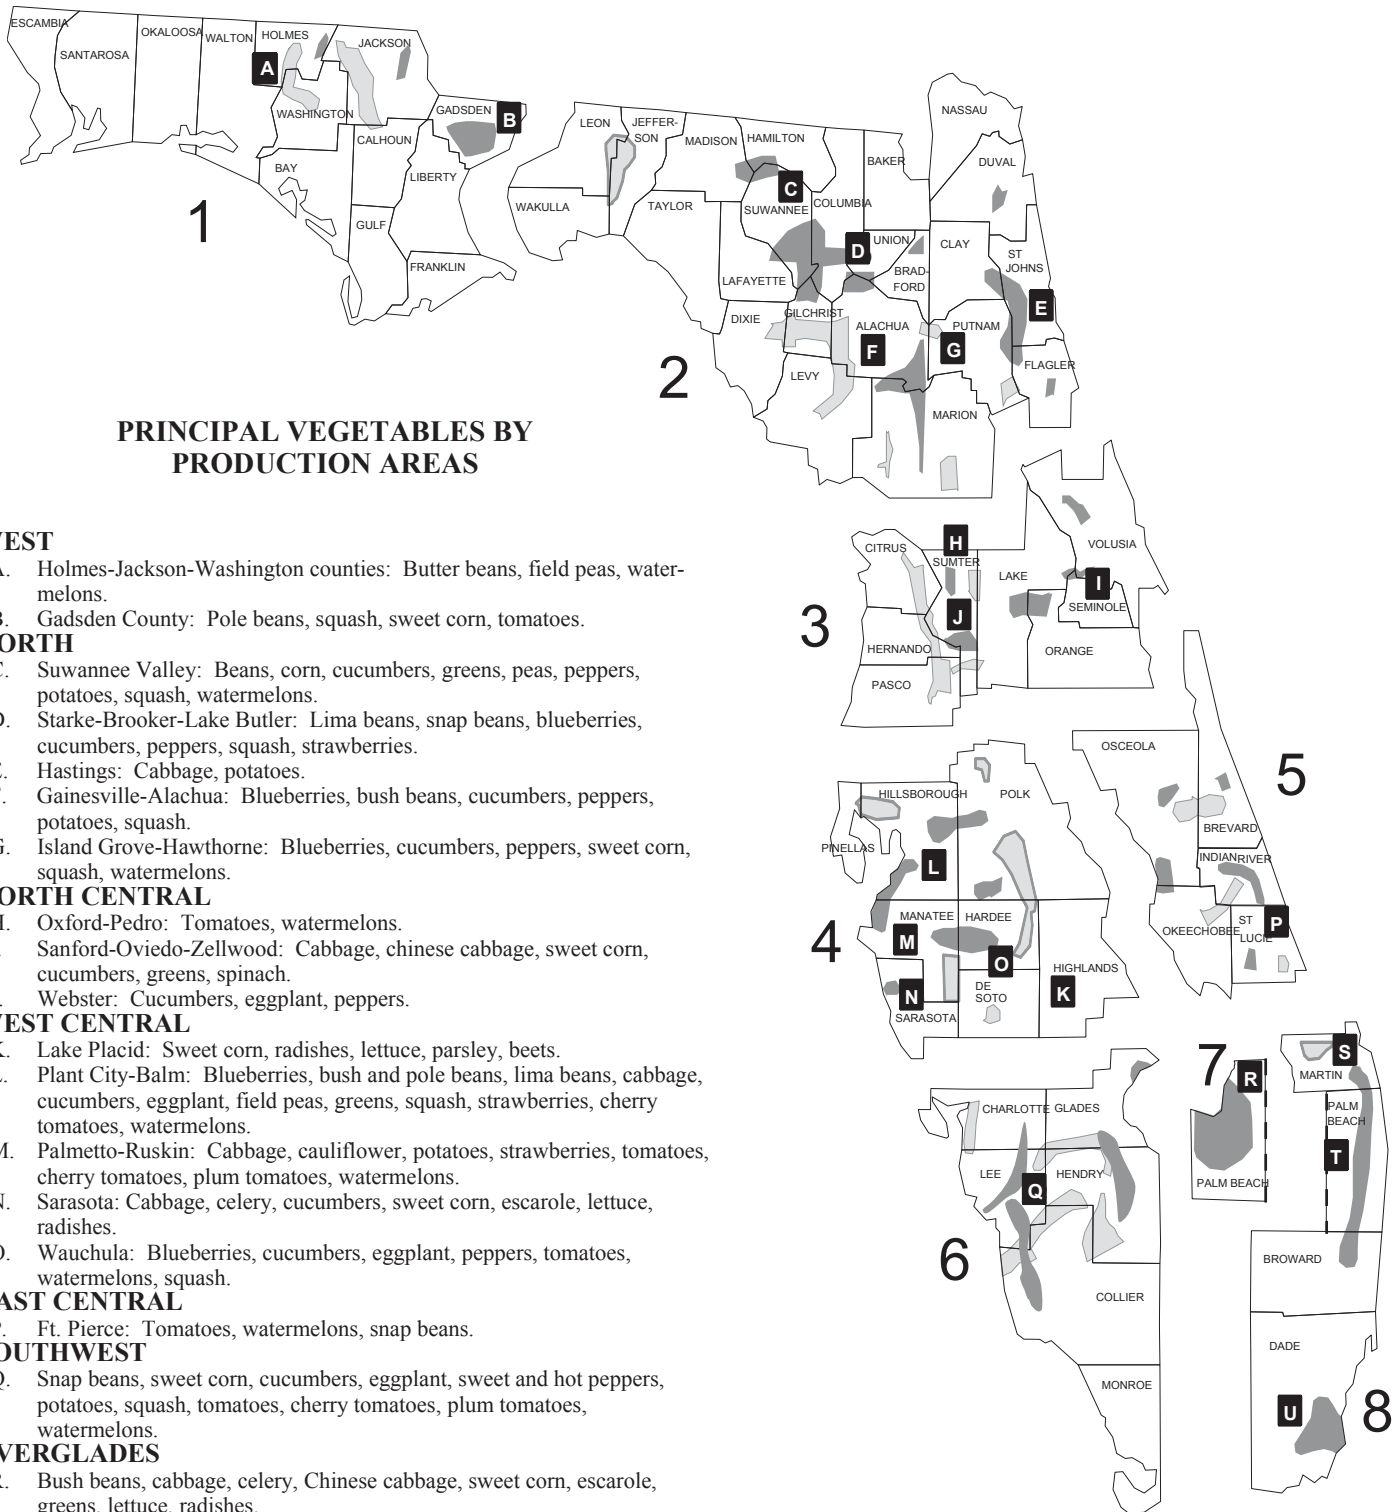

### FLORIDA PRODUCE

Most common unit, estimated net weight, and units per hundredweight, 2009-2010 crop season

### CONFIDENTIALITY OF COLLECTED DATA

All information collected from individual agricultural producers is held strictly confidential. Data provided by individual producers or other agricultural firms are used only to compile and publish statistics at the county, state, and national levels. Statistics at the county and State level are not published if they will potentially disclose information about an individual or operation. In addition, all names and addresses obtained by this office are held confidential.

**PRINCIPAL VEGETABLES BY PRODUCTION AREAS**

**1 - WEST**

- A. Holmes-Jackson-Washington counties: Butter beans, field peas, watermelons.
- B. Gadsden County: Pole beans, squash, sweet corn, tomatoes.

**2 - NORTH**

- C. Suwannee Valley: Beans, corn, cucumbers, greens, peas, peppers, potatoes, squash, watermelons.
- D. Starke-Brooker-Lake Butler: Lima beans, snap beans, blueberries, cucumbers, peppers, squash, strawberries.
- E. Hastings: Cabbage, potatoes.
- F. Gainesville-Alachua: Blueberries, bush beans, cucumbers, peppers, potatoes, squash.
- G. Island Grove-Hawthorne: Blueberries, cucumbers, peppers, sweet corn, squash, watermelons.

**3 - NORTH CENTRAL**

- H. Oxford-Pedro: Tomatoes, watermelons.
- I. Sanford-Oviedo-Zellwood: Cabbage, chinese cabbage, sweet corn, cucumbers, greens, spinach.
- J. Webster: Cucumbers, eggplant, peppers.

**4 - WEST CENTRAL**

- K. Lake Placid: Sweet corn, radishes, lettuce, parsley, beets.
- L. Plant City-Balm: Blueberries, bush and pole beans, lima beans, cabbage, cucumbers, eggplant, field peas, greens, squash, strawberries, cherry tomatoes, watermelons.
- M. Palmetto-Ruskin: Cabbage, cauliflower, potatoes, strawberries, tomatoes, cherry tomatoes, plum tomatoes, watermelons.
- N. Sarasota: Cabbage, celery, cucumbers, sweet corn, escarole, lettuce, radishes.
- O. Wauchula: Blueberries, cucumbers, eggplant, peppers, tomatoes, watermelons, squash.

**5 - EAST CENTRAL**

- P. Ft. Pierce: Tomatoes, watermelons, snap beans.

**6 - SOUTHWEST**

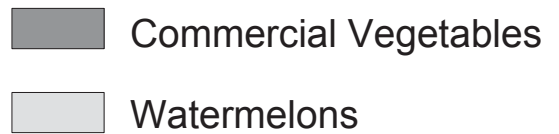

- Q. Snap beans, sweet corn, cucumbers, eggplant, sweet and hot peppers, potatoes, squash, tomatoes, cherry tomatoes, plum tomatoes, watermelons.

**7 - EVERGLADES**

- R. Bush beans, cabbage, celery, Chinese cabbage, sweet corn, escarole, greens, lettuce, radishes.

**8 - SOUTHEAST**

- S. Martin County: Cabbage, potatoes, tomatoes, watermelons.
- T. Pompano: Bush beans, lima beans, sweet corn, cucumbers, eggplant, sweet and hot peppers, squash, tomatoes, cherry tomatoes, plum tomatoes.
- U. Homestead: Bush and pole beans, cabbage, sweet corn, eggplant, okra, pickles, potatoes, squash, strawberries, tomatoes, cherry tomatoes, plum tomatoes.

2008	887	316,974	6,587	763,566
2009 <sup>3/</sup>	811	322,637	9,805	814,895
2010 <sup>4/</sup>	758	309,473	7,075	809,569

<sup>1/</sup> Does not include woody ornamentals, trees, shrubs, and sod.

<sup>2/</sup> Value of all crops grown with sales of \$10,000 or more, combines the wholesale value of sales as reported by operations with \$100,000 or more and an estimated value for operations with sales between \$10,000 and \$99,000. This is derived by multiplying the number of producers in each range of sales by the mid-point of the range.

<sup>3/</sup> Revised.

<sup>4/</sup> Preliminary.

## Florida Floriculture Wholesale Value

Million dollars

(Survey of producers with sales over \$10,000. Does not include woody ornamentals, trees, shrubs, and sod.)

## FLORIDA CUT CULTIVATED GREENS

<sup>1/</sup> Producers with five or more colonies.

<sup>2/</sup> Weighted by reported sales.

<sup>3/</sup> Stocks in producers' hands.

<sup>4/</sup> Revised.

# OTHER AGRICULTURAL RESOURCES

## AQUACULTURE HIGHLIGHTS

*(Latest information available as of the 2005 Census of Aquaculture)*

Florida aquaculture producers reported sales of \$75 million during 2005, down from 95.5 million in 2003 due to devastating hurricanes of 2004 and 2005. In 2005, sales increased for alligator farmers, but decreased for tropical fish, aquatic plants, hard clams, turtles, sportfish, and a variety of food fish including catfish, tilapia and hybrid striped bass.

There were 359 operations that reported sales for 2005 versus 544 farms in 2003. In 2003, 544 operations used 6,450 water acres in production, versus 3,010 water acres used by 359 operations during 2005.

# FORESTRY

## Forestry Information

Urban sprawl, land use conversion and market changes have been identified by the U.S. Forest Service as the major challengers to the future of forestry in the South. Over the next 15 years, Florida is predicted to grow by 30 percent – 4.5 million people – bringing the state population to over 18 million. Land use will grow by 40 percent during this same time.

Despite an increase in forest fragmentation, timber remains a major part of Florida's economy. This is reflected in timber resource base and in the products harvested off Florida forests. In 2005, Florida timberlands totaled 15.6 million acres and supported more harvestable wood volume than anytime in the previous 18 years. Growing stock volume (trees > 5 inch DBH and of commercially valuable species) increased from 619 to 686 million green tons between 1987 and 2005. This is a result of increased net annual growth from 22.4 million to 26.2 million green tons, and relatively constant annual removals of about 20 million green tons.

**Table A.1—Output of industrial products by product and species group, Florida, 2007 and 2009**

Product and species group	Year		Change	Change
	2007	2009		
	--- thousand cubic feet ---			percent
Saw logs			-	
Softwood	173,532	117,773	55,759	-32.1

Total	29,553	25,340	-4,213	-14.3
Other industrial				
Softwood	21,257	43,769	22,512	105.9
Hardwood	666	666	0	0.0
Total	21,923	44,435	22,512	102.7
All industrial				
Softwood	468,374	454,527	13,847	-3.0
Hardwood	22,687	20,051	-2,636	-11.6
Total	491,061	474,578	16,483	-3.4

<sup>a</sup> Includes roundwood delivered to nonpulp mills, then chipped and sold to pulp mills (1,403,000 cubic feet in 2007 and 3,821,000 cubic feet in 2009).

### Where does the wood come from?

- 70% from private non-industrial landowners
- 16% from forest industry
- 14% from public lands

In the last decade, more than two thirds (70 percent) of all harvests came from non-industrial private forests (NIPF), 16 percent came from forest industry lands and 14 percent came from public lands. Among the 13 southern states, Florida ranked 10th in total roundwood production, fifth in pulpwood, ninth in veneer logs and 11th in saw logs production in 2003 (Johnson et al. 2006). By 2005, Florida slipped to ninth in pulpwood production (Johnson and Stepleton 2007). Harvested wood volume varies from year to year depending on many factors including catastrophic events, such as hurricanes, which increase the harvested volume due to salvage operations.

### Conversion Factors<sup>a</sup>

#### Saw logs

Softwood 0.19121 cubic foot = 1 board ft  
5.23 board feet = 1 cubic foot

Hardwood 0.16807 cubic foot = 1 board ft  
5.95 board feet = 1 cubic ft

#### Veneer logs

Softwood 0.17241 cubic foot = 1 board ft  
5.80 board feet = 1 cubic ft

Hardwood 0.16129 cubic foot = 1 board ft  
6.20 board feet = 1 cubic foot

#### Pulpwood<sup>b</sup>

Softwood 71.00 cubic feet/cord

Hardwood 75.00 cubic feet/cord

<sup>a</sup> Conversion factors vary with stem size (d.b.h.) and species. The factors shown are for trees of average diameters removed in Florida during the latest survey period.

<sup>b</sup> Cubic feet of solid wood per cord.

# EXPORTS

# Florida's Seaports

Each of Florida's ports make a different contribution to the statewide seaport community.

## Florida's Leading Agricultural Exports, estimated, in 2010

Commodity Group	Export Value in \$
1. Edible Fruits, Nuts	419,033,229
2. Live Animals	355,339,523
3. Fruit, Vegetables, Juices	275,198,301
4. Edible Vegetables	255,386,137
5. Fish, Crustaceans	206,393,064
6. Dairy Products	110,351,011
7. Live Trees & Plants	107,391,474
8. Sugars	50,181,510
9. Live Animals	48,659,293
10. Tobacco	44,714,052

Source: Euromonitor International: <http://www.euromonitor.com/>

In 2010, Florida Ranked 7<sup>th</sup> among the states in the United States with agricultural exports topping \$3.1 billion, according to Euromonitor International.

## Over 140 countries imported Florida agricultural commodities in 2010

### The leading importers were:

1. Canada	\$842,794,594
2. Netherlands	\$186,161,891
3. Bahamas	\$164,044,057
4. Dominican Republic	\$146,079,052
5. Japan	\$122,889,728

# Florida Agriculture Groups

Important users of agricultural statistics are farm organizations, agribusiness and transportation firms, state and national policy makers and foreign buyers of agricultural products. These vital Florida Agriculture Groups provide the majority of the data collected through a broad program of sample surveys throughout the year.

## **Florida Cooperative Extension Service & Extension IFAS/UF Office Locations**

Extension service is a partnership between state, federal, and county governments to provide scientific knowledge and expertise to the public. The University of Florida (UF), together with Florida A&M University (FAMU), administers the Florida Cooperative Extension Service.

At the University of Florida, Extension service is located in the Institute of Food and Agricultural Sciences (IFAS), along with the College of Agricultural and Life Sciences (CALS) and the Florida Agricultural Research and Education Center, and is called UF/IFAS Extension.

UF/IFAS Extension encompasses thousands of Extension faculty members, scientists, educators, administrative staff, and volunteers, all working to provide solutions for your life.

[www.solutionsforyourlife.com](http://www.solutionsforyourlife.com) is the web site of University of Florida Extension Service. You can explore topics in lawn and garden care, family life and consumer choices, agriculture, community development, the environment, and youth development. Above all, our site is focused on getting you timely and relevant solutions for improving your life.

# Join the FAPC

## The features and benefits of the Florida Agricultural Promotional Campaign

If you are trying to enter a new market or need a viable marketing plan, the Florida Agricultural Promotional Campaign (FAPC), also known as “Fresh from Florida,” can help. This comprehensive marketing campaign of the Florida Department of Agriculture and Consumer Services provides marketing assistance to producers, shippers, brokers, wholesalers, suppliers, small businesses, distributors, specialty product buyers, seafood vendors, nurseries and more. If you have an agricultural product, join our program today.

### Membership Benefits:

- Graphic design assistance (upon request)
- Opportunity to participate in the Consumer Packaging Logo Incentive Program
- Usage of the “Fresh from Florida” logos
- Receive a farm sign
- Receive exporting assistance from experienced marketing representatives
- Receive the bi-annual “Fresh from Florida” magazine and “Fresh from Florida” Update
- Grant and other agricultural information emailed in a timely manner
- Business listing on online search directory

\*Benefits of the program are subject to change depending upon legislative funding.

-----

**Complete and mail the card below to get more information of the FAPC Program.  
Yes, I'd like to join the Florida Agricultural Promotional Campaign (FAPC).**

Please send me a membership application for the FAPC.

Please call me to discuss the FAPC.

or fax your request to (850) 488-7127. E-mail your request to [fapc@FreshFromFlorida.com](mailto:fapc@FreshFromFlorida.com)  
To inquire by telephone, please call (850) 921-1845.

# Florida's State Farmers' Markets

## Providing Essential Marketing Infrastructure

State Farmers' Markets assist in the marketing of farm products by providing modern marketing facilities necessary to move products from the farm to the consumer. There are 13 State Farmers' Markets that offer attendant services such as produce refrigeration, truck weigh scales, packing houses, coolers, offices, farm supply, restaurants, produce brokerage sales, and produce and freight shipping companies. Through volume production and marketing, effective competition is assured for both small and large growers and buyers.

## AGRICULTURAL STATISTICS & OTHER INFORMATION

### INTERNET

NASS National & State reports and data are available on the world wide web, the Internet.

#### NATIONAL HOMEPAGE

<http://www.nass.usda.gov>

The national homepage has links to all agency products and services such as publications, graphics, historic data, State information, statistical research, Census of Agriculture, a search engine and a Published Estimates Data Base to query and download State or county historic data. There are also links to our Customer Service unit, a Kids Page, and all other federal statistics outside the National Agricultural Statistics Service.

For a monthly summary of USDA estimates, forecasts and projections of commodities, prices, trade issues, and world crop developments, see:

[http://www.nass.usda.gov/Publications/Ag\\_Newsletter/index.asp](http://www.nass.usda.gov/Publications/Ag_Newsletter/index.asp)

#### FLORIDA HOMEPAGE

[www.nass.usda.gov/fl/](http://www.nass.usda.gov/fl/)

The Florida web site offers much of the same information as the national homepage but in a format designed for Florida customers. The reports contain the same statistics but offer more details about agriculture in Florida. Links are also available to other sites such as the Florida Department of Agriculture, University of Florida and other NASS field offices.

### PRINTER REPORTS & COMPUTER FORMAT

All NASS reports are still printed on paper. Census reports are only available while supplies last; contact the Florida office for a copy. NASS also offers a wide variety of data on diskettes or CD-ROM with National, State, and County statistics. Most of these products are in Lotus 1-2-3 spreadsheet format or comma separated (CSV) files.

A listing of all paper reports and computer products can be found in the Products & Services catalog issued every December. To order a free Products & Services catalog or purchase paper reports, diskettes or CD-ROMs, call the order desk at:

**1-800-999-6779**

### E-MAIL SUBSCRIPTIONS

Free e-mail subscriptions are available via automated mailing lists for National and State reports. You can subscribe to individual reports and they will be sent directly to your e-mail address soon after the official release time.

#### NATIONAL REPORTS VIA E-MAIL

National reports contain statistics from all states and are the most timely source of data. For more information, see:

<http://www.nass.usda.gov/Publications/index.asp>

or send e-mail to:

[usda-reports@usda.mannlib.cornell.edu](mailto:usda-reports@usda.mannlib.cornell.edu)

and in the body of the message type the word: **list**

#### STATE REPORTS VIA E-MAIL

State reports are distributed after national reports but they usually contain more local information. To learn more about this service, see:

[http://www.nass.usda.gov/Statistics\\_by\\_State/index.asp](http://www.nass.usda.gov/Statistics_by_State/index.asp)

or send e-mail to:

[listserv@newsbox.usda.gov](mailto:listserv@newsbox.usda.gov)

and in the message text (not the subject), type two lines with one word on each line: **lists**  
**help**

To subscribe to the Florida Weather & Crop News the message text (not the subject) would be:

**subscribe usda-fl-crop-weather [your name]**

#### AUTO-FAX

Selected NASS reports and information items are available from a free fax service called NASS-Fax. To receive the items, use a touch tone telephone connected to your FAX machine to call:

**202-720-2000**

Voice prompts will guide you to selected items of interest. The first time you access the system, request **Document number 0411** which will provide a listing of the information that is available in reports.
