FLORIDA

AGRICULTURE

BY THE NUMBERS

Florida Department of Agriculture and Consumer Services
Adam H. Putnam, Commissioner

Dear Friends of Agriculture,

Agriculture is one of the strongest pillars of Florida's economy, generating more than \$120 billion in annual economic impact and supporting more than 2 million jobs. The complexion of Florida's agriculture industry continues to evolve in light of challenges facing our citrus industry, with fresh market vegetables, fruits and livestock industries increasing their contributions to the state's overall agricultural cash value.

2015 was a great year for many Fresh From Florida commodities. Floriculture (\$1 billion), tomatoes (\$453 million), eggs (\$316 million), bell peppers (\$220 million), sweet corn (\$155 million), hay (\$130 million), and watermelon (\$88 million) all had higher production value than in 2014. Florida leads the United States in production value of fresh market snap beans, cabbage, sweet corn, cucumbers, grapefruit, oranges, radishes, squash, and tomatoes.

This publication, produced by the Florida Department of Agriculture and Consumer Services, is a compilation of useful data and information that summarizes agriculture's impact to our state. Collectively, these figures demonstrate the extent that Florida agriculture feeds and enriches the lives of Floridians, people throughout the United States and around the world.

Find these figures and more in this 2015 edition of Florida Agriculture by the Numbers.

Sincerely,

A handwritten signature in black ink that reads "Adam H. Putnam".

Adam H. Putnam
Commissioner of Agriculture

ACKNOWLEDGMENT

The acreage, production, and value statistics in this publication are the official State and USDA estimates prepared by the National Agricultural Statistics Service (NASS), Florida Field Office in cooperation with the Florida Department of Agriculture and Consumer Services (FDACS). These estimates are current as of September 2015 and may be revised later in the year or in the following year, if additional data become available. Any revisions made to these estimates, as well as estimates made after September 2015, are included in reports posted to the website shown below and available from the NASS Florida Field Office.

Most of the data used to develop these estimates were provided voluntarily by growers, shippers, and processors and we sincerely appreciate their public spirited cooperation. The Florida Tomato Committee, the Florida Fruit and Vegetable Association, Florida Department of Citrus, floriculture and nursery producers, sales agencies, and transportation firms have provided valuable assistance and data throughout the season. The FDACS Bureau of State Farmers Markets and the County Agricultural Agents of the University of Florida Cooperative Extension Service were also very helpful in supplying area and county estimates.

The individuals and organizations who make up the Florida agricultural industry need reliable and accurate estimates of production to make informed and knowledgeable decisions. Increasing unpredictability of commodity prices and competition from global markets, make accurate and unbiased estimates even more important. Farmers, agribusinesses, producers groups, educators, researchers, legislators and the media all need these estimates to develop sound policies and to promote Florida agricultural products.

I want to express my sincere gratitude to our dedicated staff of statisticians, support personnel, citrus field staff, and field and telephone enumerators. They are the ones who have worked hard to collect, review, and summarize these important data and publish the results.

USDA-NASS Florida Field Office

FLORIDA AGRICULTURE BY THE NUMBERS

Florida Agriculture by the Numbers has been published to provide you with reliable, comprehensive information and data on Florida agriculture. People worldwide use the basics of food, fiber and forestry products daily. Florida's producers contribute greatly to the bounty enjoyed in Florida, the United States and beyond. The following pages tell their story of productivity, innovation and delivery.

This reference book is divided by sections for ease of use. The Agricultural Overview Section provides a general overview of Florida agriculture. The Agricultural Statistics Section presents comparative performances of major commodity groups and benchmark economic data. The Groups Directory Section offers contact information for a variety of agricultural related entities. Both public and private organizations are listed. The Department Contacts Section identifies the Florida Department of Agriculture and Consumers Services' divisions with contact information.

As is occasionally the case when analyzing agricultural and economic data, numbers in rows or columns do not always sum exactly. This usually occurs when large numbers are abbreviated or when composite prices are compiled. The difference in these cases is a rounding margin. The rounding of numbers occurs in these pages when space is a consideration.

Whether you are using this book to learn more about Florida agriculture, as a reference for contact information or for any other use, Florida Agriculture by the Numbers will definitely serve as an excellent reference source throughout the year. Together, these sections provide a valuable insight to Florida agriculture and its impact on Florida's economy.

We are pleased to present Florida Agriculture by the Numbers. If you need additional information or assistance, please call the Division of Marketing and Development at (850) 617-7300.

FLORIDA AGRICULTURE OVERVIEW

Florida's 47,300 farms and ranches, utilized 9.45 million acres, and continue to produce a wide variety of safe and dependable food products. From the citrus groves and the nurseries in central and southern Florida, to the vegetables in various regions around the State, to the cattle and calves throughout the State, these farms and ranches provide Florida with a large and stable economic base.

In 2015 Florida ranked nationally:

- **1st** in value of production for fresh market snap beans, fresh market cucumbers, cucumbers for pickles, grapefruit, oranges, sugarcane, fresh market tomatoes, and watermelons.
- **2nd** in value of production for bell peppers, fresh market sweet corn, squash, greenhouse/nursery, peanuts, strawberries, and tangerines.
- **3rd** in value of production for fresh market cabbage and honey.

In 2015, in terms of total value of production, Florida accounted for:

Florida citrus growers in 2014-2015 produced 97.0 million boxes of oranges (95 percent of which were used for orange juice) and 12.9 million boxes of grapefruit (56 percent of which were used for grapefruit juice). All citrus fruit sales exceeded \$1.34 billion.

Florida growers harvested vegetables for fresh market, potatoes, sweet potatoes, strawberries, and blueberries from 200,400 acres in 2015. The value of vegetable crops exceeded \$1.50 billion. Florida ranks second to California in the total value of published fresh market vegetable production.

Livestock and Products in 2014 produced cash receipts of \$2.38 billion. Poultry farms generated \$485 million in sales with \$246 million from broilers and \$219 million from eggs.

On January 1, 2016 there were 1.69 million head of cattle on farms and ranches in Florida, including 915,000 head of beef cows and 125,000 head of milk cows. Florida ranked 13th in egg production for 2015. Florida's poultry farmers maintained an average of 9.03 million layers in 2015 (producing 2.46 billion eggs) and produced 65.1 million broilers.

The total cash receipts for floriculture products in Florida were just over \$890 million in 2014.

2014 FLORIDA CASH RECEIPTS

FLORIDA CASH RECEIPTS - 2014

- The Economic Research Service, (ERS), USDA, reports that receipts from Florida agricultural products in 2014 totaled to \$8.46 billion. This is a slight increase from last year's \$8.41 billion.
- All crops accounted for 72 percent of total cash receipts. As in previous years, the leading crop commodities were oranges (15.2 percent), floriculture (10.5 percent), sugarcane for sugar and seed (6.1 percent), and tomatoes for fresh market (5.2 percent). The leading livestock commodities were cattle and calves (10.3 percent of all cash receipts), dairy products (8.3 percent), and poultry and eggs (5.7 percent).

FARMS AND LAND IN FARMS

FARMS AND LAND IN FARMS

Florida had 47,300 commercial farms in 2015, using a total of 9.45 million acres. There were 5,600 farms with sales exceeding \$100,000.

The average farm size was 200 acres. Florida ranks 18th among all States in number of farms and 29th in land in farms.

Farms and Acreage by Year and by Economic Sales Class

Net Farm Income	2,860,101	2,199,525	2,129,574

¹ Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

Florida Cash Rents

2013-2014

CITRUS

CITRUS HIGHLIGHTS

U.S. and Florida Production

U.S. citrus utilized production for the 2014-2015 season totaled 9.02 million tons, down 4 percent from the 2013 2014 season. Florida accounted for 56 percent of total United States citrus production, while California totaled 41 percent, and Texas and Arizona combined produced the remaining 3 percent.

Florida's share of U.S. citrus production was 112.65 million boxes in the 2014 2015 season, down 9 percent from the previous season's 124.13 million boxes. Production decreased for all citrus varieties when compared to last season.

Florida's all orange production decreased by 8 percent to 96.8 million boxes. All grapefruit production is down 18 percent to 12.9 million boxes. Production of Honey tangerines is down 28 percent and early tangerine production is down 17 percent, resulting in a 22 percent decrease in all tangerines. Tangelo production is down 23 percent.

Production by Area and County

The top 5 citrus producing counties were Polk (16.8 million boxes), Hendry (15.8 million boxes), De Soto (13.7 million boxes), Highlands (12.7 million boxes), and Hardee (10.1 million boxes). Together they account for 61 percent of the State's total citrus production. The Southern area had the most citrus, followed by the Central and Western areas. The remaining two areas, the Indian River and Northern area, account for only 17 percent of the State's total citrus production. Oranges constitute 86 percent of the citrus production, grapefruit accounted for over 11 percent, and tangerines and tangelos represent almost 3 percent.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Value

The value of the 2014-2015 United States citrus crop decreased 9 percent from last season, to \$3.38 billion (packinghouse-door equivalent). Total value of production for 2014-2015 is lower for all citrus crops except lemons. Orange value of production decreased 13 percent from last season and grapefruit value is down 17 percent. Tangerine and mandarin value of production is 8 percent lower than last season and lemon value of production is up 8 percent. Tangelo value decreased 3 percent from the previous season.

Florida's \$1.03 billion preliminary on-tree value of the 2014-2015 citrus crop is 12 percent less than the revised value of \$1.17 billion for 2013 2014. The price per box is higher for tangelos and tangerines, but lower for oranges and grapefruit.

Citrus Value of Sales On-Tree by Crop Year

Florida: 2005-2006 through 2014-2015

Crop year	Value ¹ (1,000 dollars)

X Not applicable.

¹ Includes Temples and tangelos at 90 pounds.

² Was 75 pounds prior to the 2010-2011 season.

³ Was 67 pounds from the 1993-1994 to 2009-2010 season.

⁴ Was 76 pounds prior to the 2010-2011 season.

Foreign Exports

Fresh fruit exports totaled 7.0 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit exports. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 9.0 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 2.4 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2014-2015 season.

Frozen Concentrate

Final Frozen Concentrated Orange Juice (FCOJ) yield, as reported by the Florida Department of Citrus, was 1.502203 gallons per box of 42° Brix concentrate. A record FCOJ yield of 1.673141 was set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.419546 gallons per box. The late crop yielded 1.584149 gallons per box.

The final Frozen Concentrated Grapefruit Juice (FCGJ) yield was 1.174619 gallons per box of 40° Brix concentrate, down from last season's final of 1.213862 gallons per box. A record FCGJ yield of 1.364660 gallons was set in the 2006 2007 season.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.372700 gallons per box of 42° Brix concentrate was slightly lower than last season's final of 1.383379 gallons per box. A record FCTJ yield of 1.757423 gallons was set in the 1992-1993 season.

Citrus Average Price Delivered-in Processed Fruit

Florida: Crop Year 2014-2015

Variety	Price per box (dollars)	Price per pound of solids (dollars)

Early-midseason	9.503146	1.631702
Valencia	11.811859	1.844372
All grapefruit	5.206181	1.176437
White	5.881457	1.344332
Colored	4.374624	0.974866

SOURCE: Florida Department of Citrus

Tree Inventory

Results of the annual Commercial Citrus Inventory show total citrus acreage is 501,396 acres, down 3 percent from the last survey and the lowest in a series which began in 1966. New plantings, at 12,343 acres, is the most recorded in a single season since the beginning of annual surveys in 2009. The gross loss of 26,094 acres is the largest single season loss recorded during the same period.

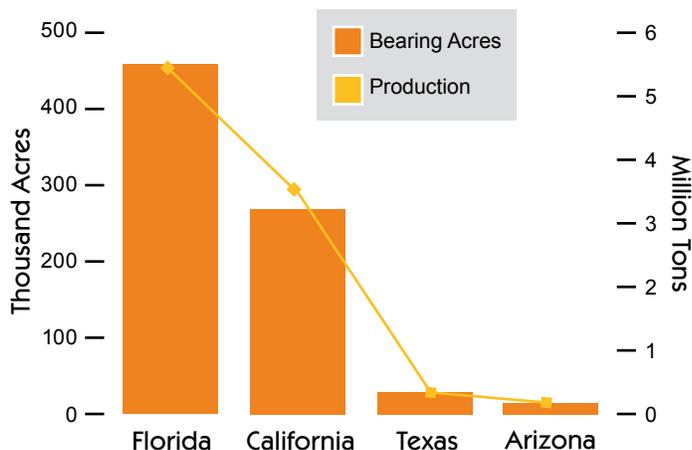

Of the 29 counties included in the survey, 22 recorded decreases in acreage, 6 showed increases, and 1 was unchanged. St. Lucie County had the largest net decrease for the second consecutive year, down 2,819 acres from last year, while Brevard County had the highest percentage net loss, with an almost 30 percent acreage reduction. Hendry County had the highest gain of 708 acres, followed by Charlotte, De Soto and Lake Counties. Polk County remains the leader with 80,488 acres.

Orange acreage declined to 441,628, continuing a trend that began after the 2000 survey. Grapefruit acreage is now at 43,962, the lowest in the series. Specialty acreage declined 6 percent and is now at 15,806.

Total citrus trees have declined steadily from the peak in 1998 to 66.8 million. Polk continues to lead with 9.9 million trees, followed by Hendry with 9.7 million, De Soto with 8.9 million, and Highlands with 7.7 million. The total is composed of oranges, 89 percent; grapefruit at 7 percent; and the remainder, including specialty and other citrus, at nearly 4 percent. Bearing trees decreased about 3 percent to 61.0 million while non-bearing trees increased over 13 percent to nearly 5.9 million since the previous survey.

AVOCADOS IN FLORIDA

The 2015-2016 production of Florida avocados decreased 192,000 bushels, or 16 percent, when compared to the 2014-2015 harvest season. Bearing acreage is down 200 acres from the previous season. The price per bushel is \$20.49, up 14 percent from the 2014-2015 crop year. The total value of crop production is \$20.6 million, a decrease of 5 percent from the previous season.

varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier Counties. Florida avocados have a lower fat content than those from other states and countries, are typically larger than avocados from California, and are available from June through the end of February.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late

FIELD CROPS

2015 FIELD CROPS HIGHLIGHTS

Value

The 2015 total value of production for corn, cotton, cottonseed, hay, peanuts, pecans, soybeans and wheat totaled \$345 million, a decrease of 8% from the previous year's total of \$374 million. The total value of corn production increased 36 percent and was valued at \$26.8 million. The value of soybean production (\$9.42 million) decreased 33 percent. Peanut value of production (\$124 million) decreased 14 percent, and hay (\$130 million) increased by 3 percent.

Acreage and Production

Acreage harvested in 2015 for corn, cotton, hay, peanuts, soybeans and wheat totaled 649 thousand acres, down 4 percent from the 679 thousand harvested in 2014. Harvested acreage for corn (50,000), peanuts (180,000), and wheat (15,000) increased. Decreased acreage was estimated for cotton (83,000), hay (290,000), and soybeans (31,000). Production increased for corn (31%), cottonseed (3%), and wheat (65%). Production declined for cotton (-20%), hay (-2%), peanuts (-2%), and soybeans (-26%).

Sugarcane

Florida producers harvested 408 thousand acres of sugarcane for sugar and seed in 2014, down 2 percent from 2013. Production was up 9 percent in 2014 from 2013. The value of production for the 2013 crop was \$579 million, up 15 percent from the 2013 total of \$505 million.

Crop Weather

In **January** 2015, Florida had cool nights with warm days at the beginning of the month as seasonal field preparation was underway in the Panhandle. Rainfall was widespread in central Florida, but dry in the south, north, and Panhandle areas. Some late cotton fields were harvested and finished by mid-month in Gadsden County where field conditions allowed. Rains fell the last full week of January. Field work and soil preparation for spring planting activities resumed in Florida as sugarcane harvest continued with few delays.

In **February**, cool and moist weather conditions, from rainfall received the previous weeks, slowed field work in most areas. Producers used pumps to remove excess water from sugarcane fields. Soil moisture levels were high in most areas with standing water reported in some fields. A cold snap hit the State in late February as rain and cold weather slowed field work in the Panhandle. Sugarcane harvest slowed due to rainfall.

In **March**, cold weather conditions continued as water saturated soil and cold conditions were evident in the Panhandle. Sugarcane harvest activities continued on schedule. Dry conditions returned the first two full weeks of March as seasonal land preparation resumed in the Panhandle and north Florida. Field corn planting commenced in some localities. Dry conditions prevailed the third full week of March as soil preparation for cotton and peanuts occurred. Rains did slow sugarcane harvest in some areas.

In **April**, field corn planting was finished in Jackson County but continued in other counties. Rains delayed sugarcane harvest in some fields. Field corn planting was complete in some counties and finished in other counties. Peanut planting activities began the first full week of April. Heavy rainfall fell in the Panhandle measuring over 12 inches in some areas which halted field work. Rains caused standing water in low areas of fields and pastures. Wet conditions continued into the final full week of April. Hay was cut in some areas as field corn planting was complete in most areas by the end of the month.

In **May**, conditions were mostly hot and dry with peanut planting activities beginning where conditions allowed. Bad peanut seed forced some reseeding activities. Dry conditions delayed cotton planting activities due to lack of available soil moisture. Hay harvesting continued in most areas with few delays. Panhandle area wheat and oat harvest began

in early May as cover crops were seeded after Irish potato fields were harvested. Peanuts emerged to full stands in most areas the final week of May as field corn harvest began in some areas. Heavy rains fell the last week of May, but dry conditions prevailed in extreme south Florida. Cotton fields were seeded under more favorable weather and growing conditions.

In **June**, heavy rains fell in central Florida while south Florida remained dry. Peanut and cotton planting was nearly complete by the first full week of June. Some washed out peanut fields required reseeding. Haying was done at night with hopes to be dry and rolled before the next day's afternoon rains. Spotty rains made hay harvest activities challenging. Field corn silage harvest was underway in some areas while corn for grain harvest began in other areas. Scattered showers improved the cotton crop conditions, but made the hay harvest process challenging. Growers pumped off excess water from sugarcane fields. Rains were frequent but scattered.

In **July**, the light and scattered rain shower patterns continued as late soybean fields were planted. Showers delayed hay harvest in some localities. Green peanuts were harvested the first full week of July. Peanuts responded well to frequent showers. Some peanut hay and perennial peanut fields were harvested. Hay harvest pace was brisk as growers took advantage of a window of clear weather.

In **August**, dry conditions plagued Florida's cotton/peanut belt and extreme southeast Florida due to weather patterns diverting rains to western portions of the Florida Peninsula. Frequent showers continued to plague hay harvest schedules. Field corn harvest work finished in some areas by the first full week of August. Heat caused wilt in some peanut and cotton fields. Recent rains boosted sugarcane field conditions. Excess rains delayed peanut harvest in some localities in the middle of the month.

In **September**, Tropical Storm Erika delayed peanut and hay harvest in some areas. Dry conditions were favorable for peanut harvest the first two weeks of September. Sugarcane harvest began the final week of September in some areas. Frequent wet weather conditions caused some missed hay cuttings. Cotton harvest began the final week of September.

In **October**, wet conditions caused poor quality and low yield in some peanut fields. Standing water delayed cotton harvest in low fields. Wet conditions continued to hamper hay harvest. Some sugarcane fields were planted while others were harvested. Peanut harvest pace was ahead of the previous season and the five-year average. Small grain seeding was underway where conditions allowed. Heavy rains fell in the Panhandle while the remainder of Florida was dry. Wet conditions adversely affected cotton lint quality.

In **November**, rains stopped row crop harvest activities in the Panhandle. Warm weather caused new cotton leaves to sprout forcing additional defoliation sprays. Sugarcane harvest continued. Drier conditions prevailed the second week of November, but low fields were still too wet for harvest equipment. Soybean harvest was underway in most areas the second week. Returning showers delayed harvest because of ponding and standing water. Drier conditions returned the final week of November allowing harvest to continue.

In **December**, dry weather patterns continued and harvest continued. Some cotton fields were defoliated again due to new sprouts due to warm conditions. Peanuts harvest wound down by the first week of December with only a few unharvested fields too wet for digging. The same situation for cotton as low fields were too wet for the harvest equipment. Sugarcane harvest continued with few delays. A cold front brought rainfall which prompted water levels in sugarcane fields to be managed with lateral canals and raised beds. Cooler weather benefited sugarcane as sucrose levels rose as harvest continued.

Field Crops Acreage, Yield, Production, and Value by Crop Years

Florida: 2006-2015

[All 2015 estimates are preliminary]

Crop and year	Area		Yield (bushels)	Production (1,000 bushels)	Season average price (dollars)	Value of production (1,000 dollars)

LIVESTOCK AND PRODUCTS

LIVESTOCK HIGHLIGHTS

Dairy

Florida dairies produced 2.58 billion pounds of milk in 2015 up from 2.51 billion pounds produced during 2014. Annual milk production per cow was 20,656 pounds, up from 20,390 pounds per cow in 2014. On January 1, 2016, there were 125,000 milk cows on Florida farms and commercial dairies, an increase of 1,000 from 2015. Florida ranked 19th among States in number of milk cows.

Cash receipts from marketings of Florida milk in 2015 totaled \$549 million, down from \$706 million in 2014. In 2015, the highest price of replacement milk cows was \$2,170 per head in January 2015, down from a peak price of \$2,190 in October 2014.

Beef

All cattle and calves on Florida farms and ranches as of January 1, 2016, including dairy cattle, totaled 1.69 million head, up 10,000 from 2015. Beef cows in Florida were 915,000 head, up 9,000 head from 2015. Nationally, Florida ranked 10th in beef cows and 18th in total cattle. Calves born during 2015 totaled 800,000 head, down 20,000 head from 2014.

Cash receipts from cattle and calf marketings were \$859 million in 2015, down from \$868 million in 2014.

Poultry

Hens and pullets of laying age on farms in December 2015 were 9.17 million birds, compared to 8.56 million birds in December 2014. Florida egg production from December 1, 2014 to November 30, 2015, was 2,463 million eggs, a decrease from the previous year's production of 2,390 million eggs.

The total value of Florida egg production in 2015 was \$316 million, up from \$219 million in 2014. The value of broilers produced in Florida during 2015 totaled \$203 million, down from \$246 million a year earlier.

Florida liveweight broiler production in 2015 totaled 378 million pounds, down from 387 million pounds produced in 2014. Broilers produced in Florida during 2015 totaled 65.1 million birds, down from 66.7 million birds in 2014. Broilers hatched in Florida were 52.6 million chicks, down from 53.0 million chicks in 2014.

Hogs

The hog inventory in Florida in December 1, 2015 was 16,000 head. There were 31,000 head of hogs marketed in Florida in 2015, up from 29,000 head in 2014. There were 51,100 head slaughtered in 2015, up from 40,700 head in 2014. Cash receipts from hogs in 2015 were \$2.48 million.

Florida Broilers Production vs. Value of Production

Hogs and Pigs Number on Farms and Inventory Value

Florida: 2006-2015

Year	Number on farms – December 1			Market hogs and pigs				Total Inventory value (1,000 dollars)
	Total Head (1,000 head)	Breeding (1,000 head)	Market (1,000 head)	Under 50 Pounds (1,000 head)	50-119 Pounds (1,000 head)	120-179 Pounds (1,000 head)	180 Pounds and over (1,000 head)	
2006	20	4	16	7	4	4	1	3,244
2007	20	5	15	7	5	2	1	3,013
2008	20	5	15	6	6	2	1	2,813
2009	20	5	15	6	5	3	1	3,274
2010	15	3	12	4	4	2	2	2,297
2011	16	4	12	4	4	2	2	2,759
2012	15	3.5	11.5	4	3.5	2	2	2,318
2013	15	3.5	11.5	4	3.5	2	2	2,293
2014	17	4	13	4	5	2	2	3,114
2015	16	4	12	4	4	2	2	2,292

Hogs and Pigs Number on Farms and Inventory Value

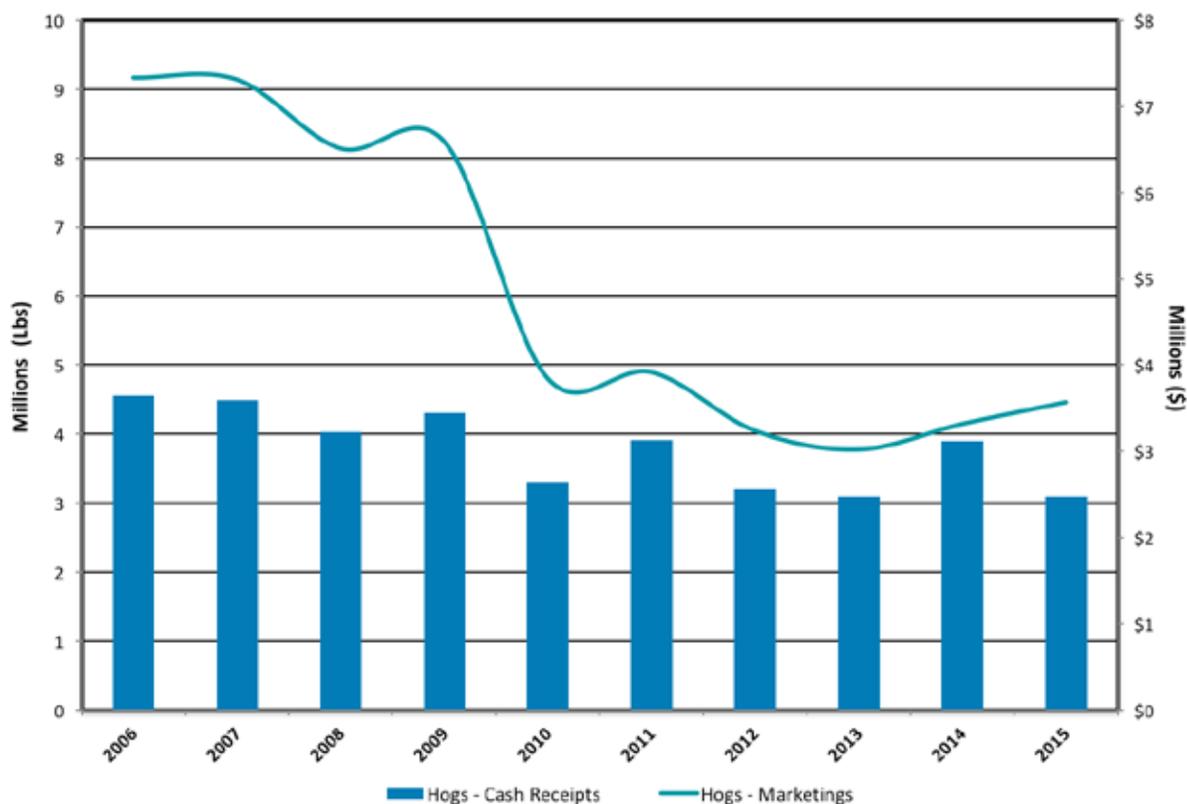

Florida: 2006-2015

Year	Inventory December 1 of Previous Year (1,000 head)	Sows farrowing (1,000 head)	Pig crop (1,000 head)	Inshipments (1,000 head)	Marketings ¹ (1,000 head)	Farm Slaughter (1,000 head)	Deaths (1,000 head)
2006	20	8	56	15	67	1.0	3.0
2007	20	8	56	15	67	1.0	3.0
2008	20	8	56	11	62	1.0	4.0
2009	20	7	54	9	58	1.0	4.0
2010	15	4	28	3	33	1.0	2.0
2011	16	4	28	10	34	0.7	2.3
2012	15	4	24	6	29	0.7	1.3
2013	15	4	26	6	28	0.7	2.9
2014	17	4	28	6	29	0.7	1.9
2015	17	4	28	6	31	1.0	3.1

¹ Includes custom slaughter for use on farms where produced, but excludes inter-farm sales within State.

Florida Hogs Marketings vs. Cash Receipts

*Marketings exclude custom slaughter for use on farms where produced and inter-farms sales within the State.

Hogs Inventory December 1, Annual Marketings, Cash Receipts, and Gross Income

Florida: 2006-2015

Year	Head (1,000 head)	Marketings ¹ (1,000 pounds)	Price per 100 pounds (dollars)	Cash receipts ² (1,000 dollars)	Gross income ³ (1,000 dollars)
2006	20	9,169	39.40	3,643	3,695
2007	20	9,140	39.10	3,596	3,651
2008	20	8,140	39.40	3,226	3,279
2009	20	8,240	41.80	3,447	3,507
2010	15	4,800	55.10	2,640	2,788
2011	16	4,894	(4)	3,125	3,259
2012	15	4,043	(4)	2,561	2,694
2013	15	3,770	(4)	2,471	2,583
2014	17	4,140	(4)	3,115	3,248
2015	16	4,456	(4)	2,480	2,581

¹ Excludes custom slaughter for use on farms where produced and interfarm sales within the State.

² Receipts from marketings and sale of farm slaughter.

³ Cash receipts plus the value of home consumption.

⁴ State level not available due to program change.

Commercial Hogs Slaughter Head, Average Live Weight, and Total Live Weight

Florida: 2006-2015

[Includes slaughter under Federal inspection, excludes farm slaughter]

Year	Head	Average live weight (pounds)	Total live weight (pounds)
2006	95,900	133	12,643,000
2007	88,400	145	12,794,000
2008	82,700	135	11,166,000
2009	82,500	143	11,809,000
2010	76,800	133	10,212,000
2011	94,900	122	11,563,000
2012	66,900	138	9,176,000
2013	76,000	127	9,589,000
2014	70,900	143	6,617,000
2015	72,200	163	7,312,000

VEGETABLES, MELONS AND BERRIES

2015 SEASON VEGETABLE HIGHLIGHTS

Beginning in 2012 year, NASS began estimating vegetable production on a calendar year basis. Data included in this publication reflects vegetable acreage, yield, production, and value for January 1, 2015 through December 31, 2015. Blueberry numbers for 2015 were not available at publication time so yearly comparisons exclude blueberries.

Value

The 2015 value of production for the published major berries, Irish potatoes, vegetable crops, and watermelons totaled \$1.50 billion, up one percent from the comparable 2014 value of \$1.48 billion. The ranking from the highest to lowest value of the berry, Irish potato, vegetables, and watermelon crops are: (1) tomatoes, (2) strawberries, (3) bell peppers, (4) sweet corn, (5) potatoes, (6) watermelons, (7) snap beans, (8) cucumbers, (9) cabbage, and (10) squash. The crops that increased in percentage and value were (+34%) bell peppers, sweet corn (+20%), watermelons (+10%) and tomatoes (+4%). Crops that decreased in value and percentage included (-1%) snap beans, (-5%) strawberries, (-18%) potatoes, (-27%) cucumbers, and (-32%) for cabbage and squash.

Acreage

The harvested acreage for 2015 for the published major berries, potatoes, vegetable crops, and watermelons totaled 200,400 acres, up two percent from the 196,300 comparable acres harvested the previous year. Crops with increased acreage and percentages included (13%) cucumber, (9%) sweet corn, (+7%) watermelon, (+3%) snap beans, (+3%) bell peppers, and (+1%) potatoes. Crops with less acreage and percentage decreased included (-2%) tomatoes, (-7%) cabbage, (-8%) sweet potatoes, and (-13%) squash. Strawberries acreage remained the same.

Production

Production in 2015 of the published major berries, potatoes, vegetable crops, and watermelons totaled 41.5 million hundredweight, up five percent from the 39.6 comparable million hundredweight the prior calendar year. Crops with increased percentage and production were (+42%) bell peppers, (+22%) watermelons, (+18%) strawberries, (+13%) sweet corn, and (+3%) tomatoes. Commodities with percentage decreases and less production were (-3%) potatoes, (-6%) sweet potatoes, (-7%) snap beans, (-10%) cabbage, (-25%) squash, and (-31%) cucumbers.

Weather for the 2015 growing season

In **January** 2015, the month started cold and dry with most rainfall by month's end. Cabbage and potatoes were planted, but wet conditions slowed planting pace at the end of the month. Spring vegetables were planted with irrigation water in south Florida Miami-Dade County. Humid weather conditions caused higher disease problems in southwest Florida. By the end of the month, favorable conditions increased spring harvest season

vegetable activity.

In **February**, drier conditions allowed cabbage and potato planting activities to resume. Miami-Dade County farmers harvested vegetables and tropical fruit. Land preparation for vegetable planting began on north Florida fields by the middle of the month. Freezing weather arrived the final week of the month along with several days of windy weather preceding the freeze that damaged sensitive vegetable crops. Damage was minimal for most vegetable crops. Irish potato planting wrapped up by the end of the month.

In **March**, watermelons were planted and finished by month's end. Watermelon sets were set in Gilchrist and Levy county fields. Miami-Dade County farmers harvested vegetables and tropical fruit. Planting potatoes finished during the month while harvesting of cabbage continued all month long. Southwest and south Florida farmers were busy all month harvesting vegetables as dry weather conditions prevailed. Dry and warm conditions required irrigation application in most fields where irrigation water was available especially in south Florida.

In **April**, dry conditions prevailed the first week as Bradford County strawberry fields were picked. The warming trend increased insect pressure in most fields. Blueberry, peach, and watermelon harvesting was underway in Charlotte, Glades, and Hendry counties. South Florida vegetables and non-citrus fruit were harvested. Late in April, potato harvesting began in Flagler, Putnam, and St. Johns counties. Strawberry harvest began in Okaloosa County while carrots were harvested in Hamilton County. Higher temperatures contributed to a quick end and shortened leafy greens harvest season period in south Florida.

In **May**, Flagler and Putnam county farmers harvested potatoes, cabbage, and leafy greens. Green beans, carrots, cabbage, leafy greens, potatoes, and blueberry fields were harvested in northern Florida counties. Heavy irrigation water was applied to south Florida vegetable fields due to dry weather conditions. Strawberry harvest was completed in Bradford County and blueberry growers in Charlotte and Glades counties were moving to u-pick harvest mode as their season finished. By the end of the month, farmers in the Panhandle, north, and central Florida were harvesting vegetables. Southwest Florida vegetable fields were cleaned up in preparation for summer fallow. Sweet corn and blueberry harvest wrapped up in southeast Florida. Also, vegetable crops planted in Miami-Dade County were being irrigated due to dry conditions.

In **June**, central Florida watermelon, squash, okra, and summer legume fields were harvested in the first half of the month. North Florida potato and cabbage harvest was complete by the first week. Tomato harvest was in full swing in the Florida Panhandle region by mid-month. Heavy rains fell in southwest Florida in the middle of the week with some locations over four inches. Southeast Florida did not receive regular afternoon rains as crops exhibited drought stress. Watermelon harvest continued in the Florida Panhandle, but was complete in northeast Florida. Tropical vegetables were harvested in Miami-Dade County with all crops being irrigated due to dry

weather conditions.

In **July**, rainfall varied greatly across the State with southeast Florida rated abnormally dry to severe drought. Irrigation water continued to be applied on Miami-Dade County fields. Watermelon harvest was complete in Dixie County in the second week. Peas and watermelons were harvested. Mangos, sweet potatoes, and okra were harvested and marketed in Miami-Dade County the last portion of the month. Land preparation and laying plastic for fall plantings began at the end of the month on southeast Florida fields. Tropical vegetable harvest continued in Miami-Dade County.

In **August**, heavy rains fell in Hendry County during the middle of the month forcing farmers to use throw out pumps to lower water tables in fields. Wet conditions delayed tomato planting in Manatee County fields. Irrigation applications were still required in southeast Florida due to continued dry conditions, but harvest of tropical vegetables continued. Heavy rains from Tropical Storm Erika caused localized flooding in some fields. Throw out pump use continued as needed.

In **September**, some fall vegetable plantings starting in southeast Florida. Shower activity continued in most areas as low lying fields were flooded the second week of the month. Southeast Florida vegetables and tropical fruit were harvested, but irrigation was still necessary. Land preparation in south Florida was underway for planting cabbage and potatoes during the middle of the month. Water levels declined in ditches and wetlands which allowed land preparation and planting activities to resume by the end of the month. Cabbage and leafy greens were planted in north Florida the end of the month.

In **October**, cabbage and leafy green planting schedules were behind due to wet conditions in north Florida. Strawberry plantings began in Hillsborough County. Tropical vegetable harvest continued in Miami-Dade County. Green bean harvest began in some locations the second week. Cabbage and leafy vegetables continued the final week as drier conditions prevailed. Crops in south Florida matured and harvested in good condition the final week of the month.

In **November**, light volumes of vegetables went to southeast Florida markets. Bradford County blueberry fields flowered and produced fruit due to unseasonably warm weather. Unseasonably hot weather in southwest Florida caused sunburn on harvested fruit and losses of transplants. Cabbage and collards were planted in Flagler and Putnam counties. Hot conditions in southwest Florida continued to reduce yields and size of harvested crops. Growers worked overtime harvesting to meet the demands of the Thanksgiving market.

In **December**, strawberries were harvested and finished in some areas the final week. In south Florida, a cold front the first week with rain and wind battered sensitive vegetable crops. Spring vegetable crops were planted. Heavy rains flooded several fields in south Florida the second week. North Florida field seedbed preparation was underway for potato planting. Wet and warm weather conditions in southwest Florida lowered vegetable yields and quality. Leafy greens and cabbage were planted and harvested in north Florida. Warm conditions accelerated maturity in vegetable crops and adversely affected yield and quality.

DEFINITIONS AND EXPLANATIONS

Planted Acreage is the total acreage which has been planted for harvest during the crop year. Acreage lost and replanted to the same crop in time for harvest in the same quarter is counted only once. Acreage harvested and planted again to the same crop is counted twice.

Harvested Acreage is the acreage partially or completely harvested. Acreage lost before or at maturity through natural or economic causes is not included in the acreage for harvest.

Yield is the average production per harvested acre of merchantable quality harvested and sold or utilized for human consumption.

Production is the quantity actually harvested and sold or utilized for human consumption.

Unit Value for fresh market sales is the equivalent price received, f.o.b. shipping point basis and encompasses all grades and sizes marketed or utilized. Included are packing charges, selling charges, precooling, top ice, or other costs which contribute to the value of the product at shipping point. The value per unit for quantities sold to processors is the average value paid for usable quantities, on a "delivered to plant door" basis. This value includes transportation and other normal costs incident to delivery at plant door.

Total Value is the equivalent value of production sold or utilized based on the unit value. Cullage and other quantities not sold or utilized because of natural or economic factors are excluded.

Other Counties include harvested acreage for all counties for which either published data would result in the disclosure of individual operations or acreage totals for specific commodities of minor importance in the State.

Production And Price Unit - The official USDA vegetable crop estimates are published on a weight basis. For this bulletin, the official estimates for most vegetable crops have been converted to hundredweight. If changes in container weights are necessary, all data pertaining to the production of the commodity in question are revised to maintain comparability between years. The table on the next page gives the net weight used per container and the number of containers per hundredweight for Florida produce.

CONFIDENTIALITY OF COLLECTED DATA

All information collected from individual agricultural producers is held strictly confidential. Data provided by individual producers or other agricultural firms are used only to compile and publish statistics at the county, State, and national levels. Statistics at the county and State level are not published if they will potentially disclose information about an individual or operation. In addition, all names and addresses obtained by this office are held confidential.

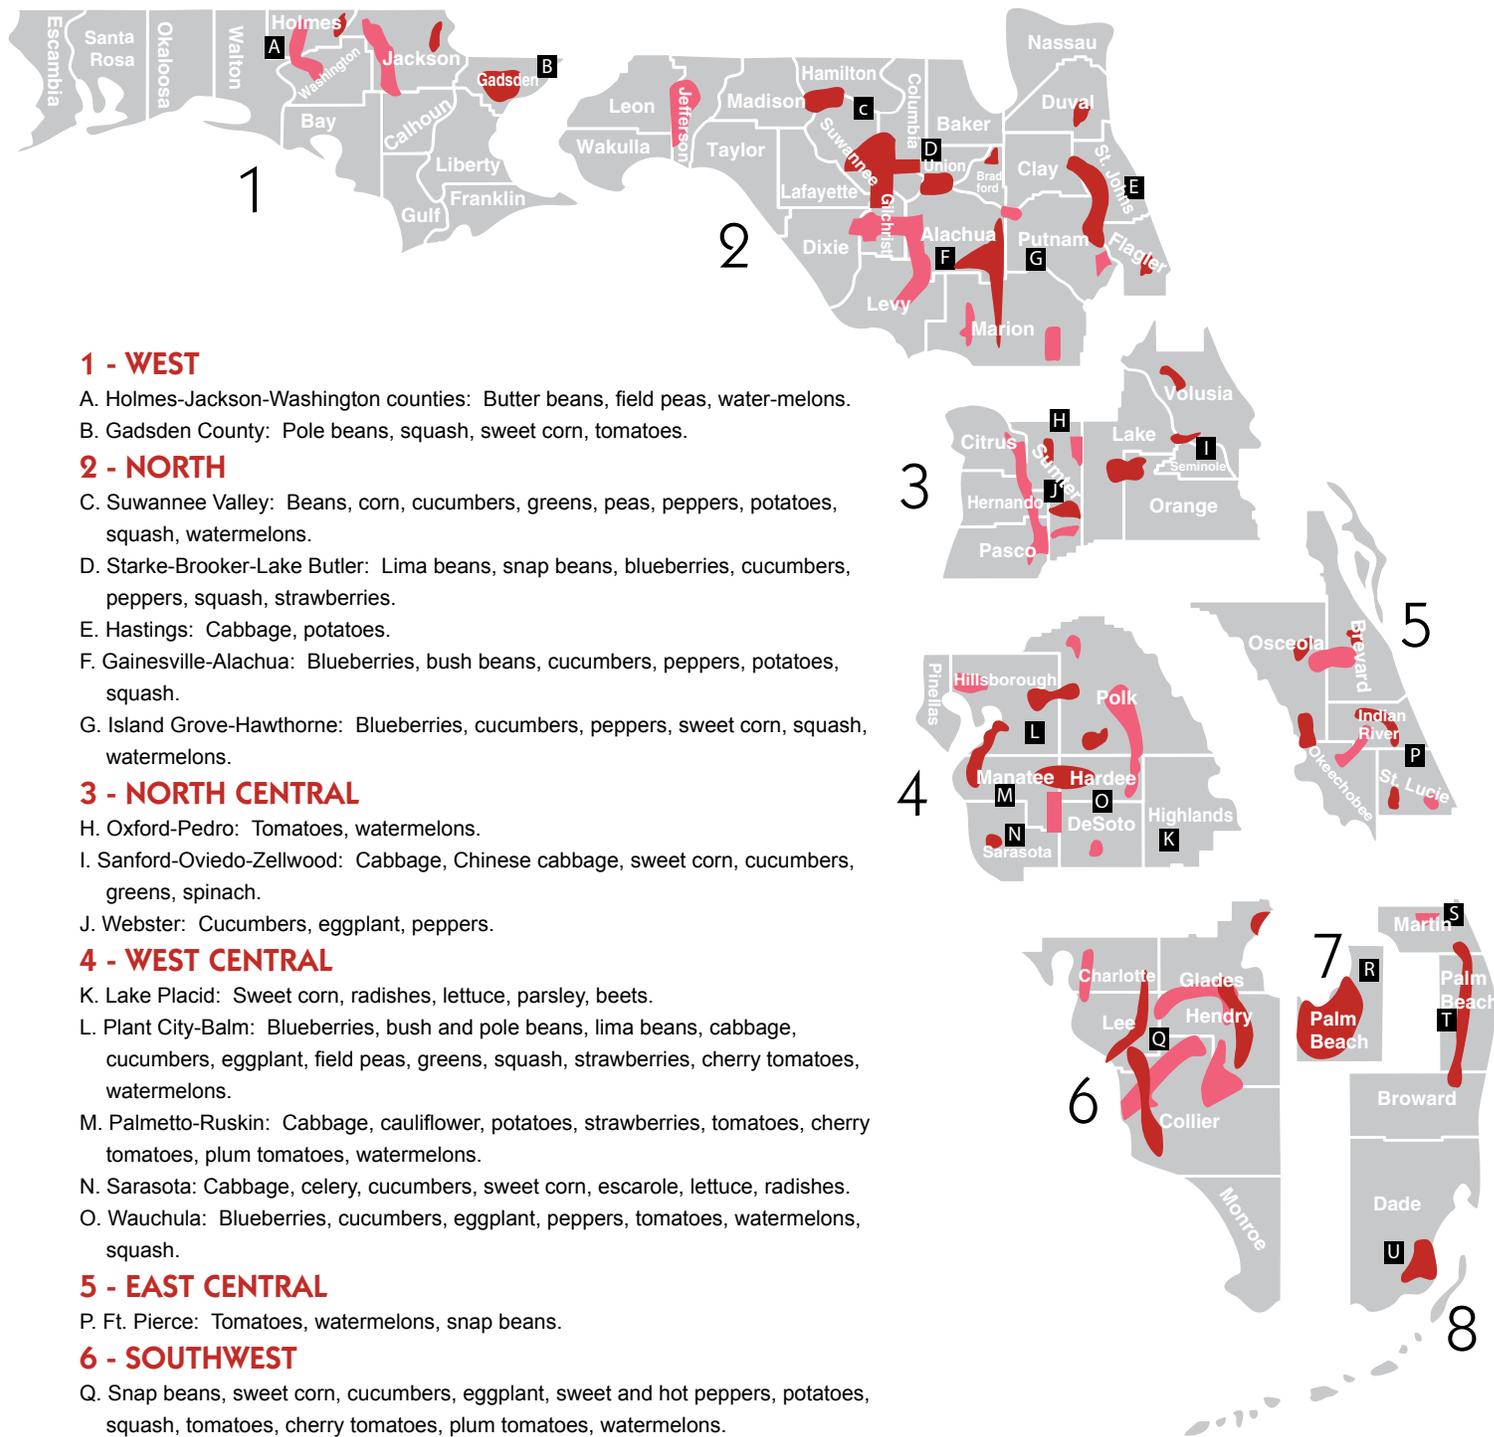

Florida Produce

[Most common unit, estimated net weight, and units per hundredweight, 2015 crop season]

Commodity	Unit	Estimated net weight (pounds)	Number of units per cwt
Snap Beans	Bushel	30	3.333
Blueberries	Flat	11	9.090
Cabbage	Crate	50	2.000
Carrots	Sack	48	2.083
Cauliflower	Carton	25	4.000
Celery	Crate	60	1.667
Chinese Cabbage	Crate	50	2.000
Sweet Corn	Crate	42	2.381
Cucumbers	Bushel	55	1.818
Eggplant	Bushel	33	3.030
Escarole	Crate	25	4.000
Lettuce, Bibb	Carton	10	10.000
Lettuce, Boston	Carton	20	5.000
Lettuce, Iceberg	Carton	50	2.000
Lettuce, Romaine	Carton	40	2.500
Lettuce, Leaf	Carton	25	4.000
Okra	Bushel	30	3.333

PRINCIPAL VEGETABLES BY PRODUCTION AREAS

1 - WEST

- A. Holmes-Jackson-Washington counties: Butter beans, field peas, water-melons.
- B. Gadsden County: Pole beans, squash, sweet corn, tomatoes.

2 - NORTH

- C. Suwannee Valley: Beans, corn, cucumbers, greens, peas, peppers, potatoes, squash, watermelons.
- D. Starke-Brooker-Lake Butler: Lima beans, snap beans, blueberries, cucumbers, peppers, squash, strawberries.
- E. Hastings: Cabbage, potatoes.
- F. Gainesville-Alachua: Blueberries, bush beans, cucumbers, peppers, potatoes, squash.
- G. Island Grove-Hawthorne: Blueberries, cucumbers, peppers, sweet corn, squash, watermelons.

3 - NORTH CENTRAL

- H. Oxford-Pedro: Tomatoes, watermelons.
- I. Sanford-Oviedo-Zellwood: Cabbage, Chinese cabbage, sweet corn, cucumbers, greens, spinach.
- J. Webster: Cucumbers, eggplant, peppers.

4 - WEST CENTRAL

- K. Lake Placid: Sweet corn, radishes, lettuce, parsley, beets.
- L. Plant City-Balm: Blueberries, bush and pole beans, lima beans, cabbage, cucumbers, eggplant, field peas, greens, squash, strawberries, cherry tomatoes, watermelons.
- M. Palmetto-Ruskin: Cabbage, cauliflower, potatoes, strawberries, tomatoes, cherry tomatoes, plum tomatoes, watermelons.
- N. Sarasota: Cabbage, celery, cucumbers, sweet corn, escarole, lettuce, radishes.
- O. Wauchula: Blueberries, cucumbers, eggplant, peppers, tomatoes, watermelons, squash.

5 - EAST CENTRAL

- P. Ft. Pierce: Tomatoes, watermelons, snap beans.

6 - SOUTHWEST

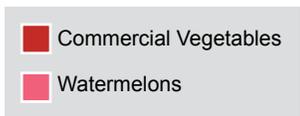

- Q. Snap beans, sweet corn, cucumbers, eggplant, sweet and hot peppers, potatoes, squash, tomatoes, cherry tomatoes, plum tomatoes, watermelons.

7 - EVERGLADES

- R. Bush beans, cabbage, celery, Chinese cabbage, sweet corn, escarole, greens, lettuce, radishes.

8 - SOUTHEAST

- S. Martin County: Cabbage, potatoes, tomatoes, watermelons.
- T. Pompano: Bush beans, lima beans, sweet corn, cucumbers, eggplant, sweet and hot peppers, squash, tomatoes, cherry tomatoes, plum tomatoes.
- U. Homestead: Bush and pole beans, cabbage, sweet corn, eggplant, okra, pickles, potatoes, squash, strawberries, tomatoes, cherry tomatoes, plum tomatoes.

2015 United States Fresh Market Vegetable Production Down 2 Percent from 2014

Fresh market vegetable and melon production for the 24 selected crops estimated in 2015 totaled 400 million hundredweight, down 2 percent from last year. Harvested area covered 1.55 million acres, down 1 percent from 2014. Value of the 2015 crop is estimated at 11.9 billion dollars, up 11 percent from a year ago. The three largest crops, in terms of production, were onions, head lettuce, and watermelons, which combined accounted for 36

percent of the total production. Tomatoes, head lettuce, and romaine lettuce claim the highest values, accounting for 29 percent of the total value when combined.

For the 24 selected vegetables and melons estimated in 2015, California continued to be the leading fresh market State, accounting for 46 percent of the harvested area, 51 percent of production, and 58 percent of the value.

Fresh Market Vegetable

Leading States: 2015

Rank	Area harvested		Production		Value

HORTICULTURE

FLORIDA 2015 FLORICULTURE

In 2015, the State's expanded wholesale value of floriculture crops increased \$107 million over 2014 totals, surpassing the \$1 billion mark for the first time in 10 years. Total greenhouse and nursery cash value sales of \$1,039,411. The number of producers was 710, down 11

from 2014. Open ground cultivated areas increased by 708 acres while total covered area decreased by 25,759 square feet. Florida remains second in the United States for production of greenhouse and nursery products in general.

Floriculture Producers, Production Areas, and Expanded Wholesale Value for Operations with \$10,000+ Sales

Florida: 2006-2015

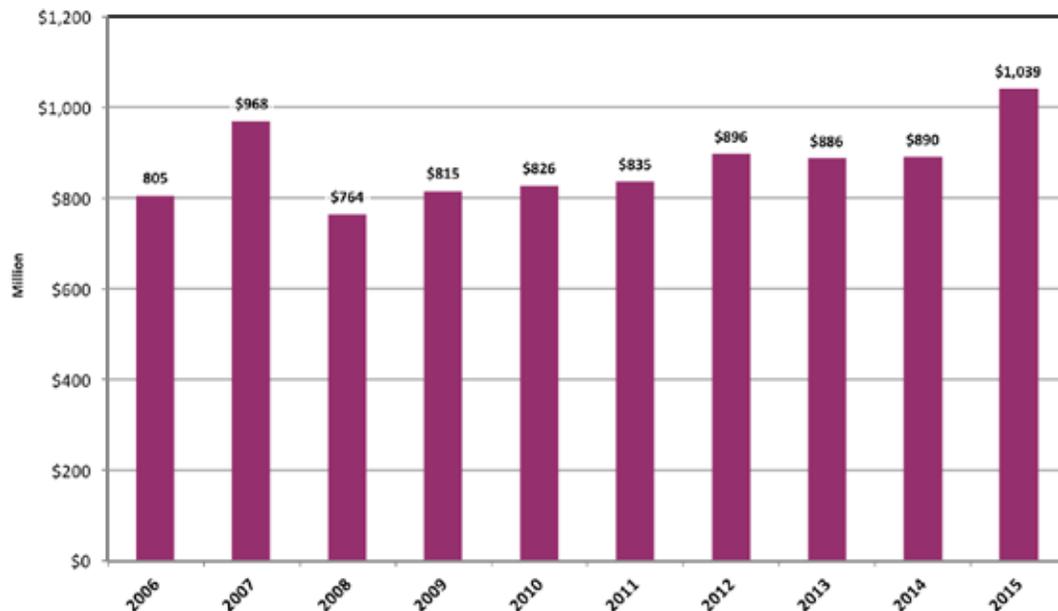

Year	Number of producers ¹	Total covered area (1,000 square feet)	Open ground (acres)	Expanded wholesale value ² (1,000 dollars)

2015 ³	710	289,184	6,853	1,039,411

¹ Does not include woody ornamentals, trees, shrubs, and sod.

² Value of all crops grown with sales of \$10,000 or more, combines the wholesale value of sales as reported by operations with \$100,000 or more and an estimated value for operations with sales between \$10,000 and \$99,000. This is derived by multiplying the number of producers in each range of sales by the mid-point of the sales range.

³ Preliminary.

BEEES AND HONEY COLONIES

FLORIDA HONEY PRODUCTION

In 2014, there were 245,000 honey producing colonies in Florida, an 11.4% increase over 2013. Honey production (14.7 million pounds) and value of production (\$30.6 million) increased by 9.5% and 12.2% respectively.

Producers received an average \$2.08/pound, up 5 cents from 2013. Each colony yielded on average 60 pounds of honey, down 1.6% from 2013.

Honey Number of Colonies, Yield, Production, Price, Value, and Stocks

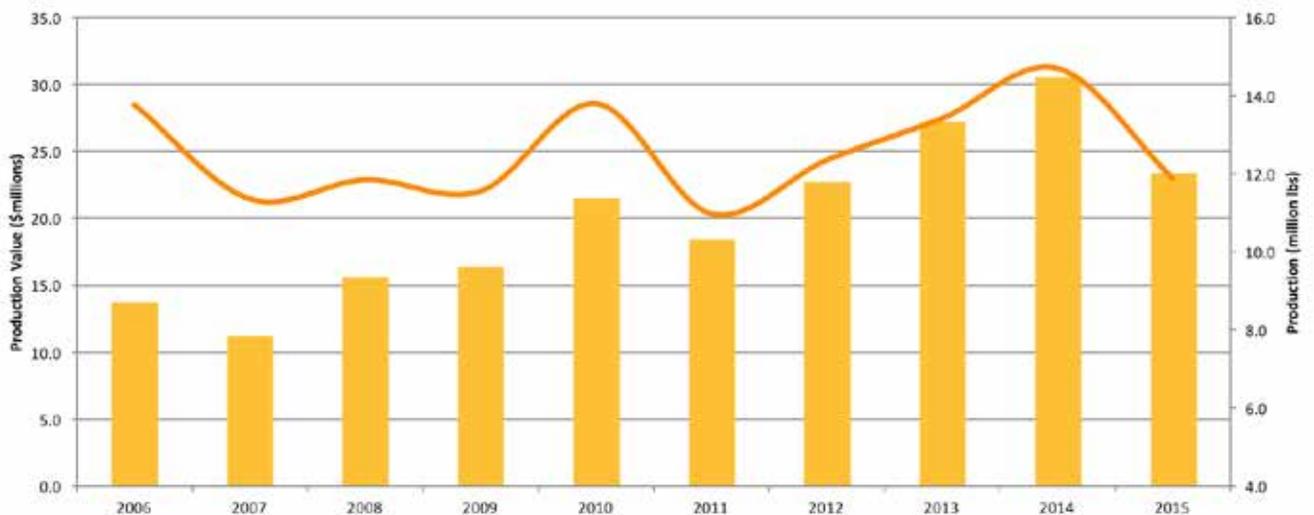

Florida: 2006-2015

[Producers with 5 or more colonies. Colonies which produced honey in more than one State were counted in each State]

Year	Honey producing colonies ¹ (1,000 colonies)	Yield per colony (pounds)	Production (1,000 pounds)	Average price per pound ² (cents)	Value of production ³ (1,000 dollars)	Stocks December 15 ⁴ (1,000 pounds)

1 Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the entire year.
 2 Average price per pound based on expanded sales.
 3 Value of production is equal to production multiplied by average price per pound.
 4 Stocks held by producers.

Florida Honey
Production vs Production Value

AQUACULTURE AND SEAFOOD

AQUACULTURE

Florida aquaculture producers reported sales in 2012 of \$69 million based upon a survey conducted for the Florida Department of Agriculture and Consumer Services, Division of Aquaculture. This survey was administered by the Florida Agricultural Statistics Service.

Reported sales in 2012 were above those of \$66 million reported in 2005, the last time this survey was conducted. There were 686 operations that reported being in business during 2012; of those, 404 operations reported appreciable sales. The operations without sales reflect either new operations which have not yet sold a product

or operations in business that did not market any product in 2012.

Florida aquaculturists produced animals or plants for ornamental, food or miscellaneous markets. Ornamental sales totaled \$35.5 million and consisted of freshwater or marine animals and plants that included freshwater fish, crayfish or marine fish, corals, live rock, snails, and shrimp sold to the aquarium or water garden markets. Sales of aquaculture products for human consumption totaled \$24.1 million and included freshwater or marine fish, clams, oysters, shrimp, prawns, alligators, and turtles.

FORESTRY

FLORIDA FORESTRY ECONOMIC HIGHLIGHTS

Economic Output

Of Florida's 17.3 million acres of forest land, 15.4 million acres of timberlands supported economic activities which generated \$16.09 billion in total output impacts in 2014. This was 3% less than 2013 output impacts, but still 13% more than in 2008 at the lowest point in the recent economic recession (Fig. 1).

The Economic Impacts of Forestry, Wood & Paper Product Manufacturing Industries in Florida, 2004 - 2014

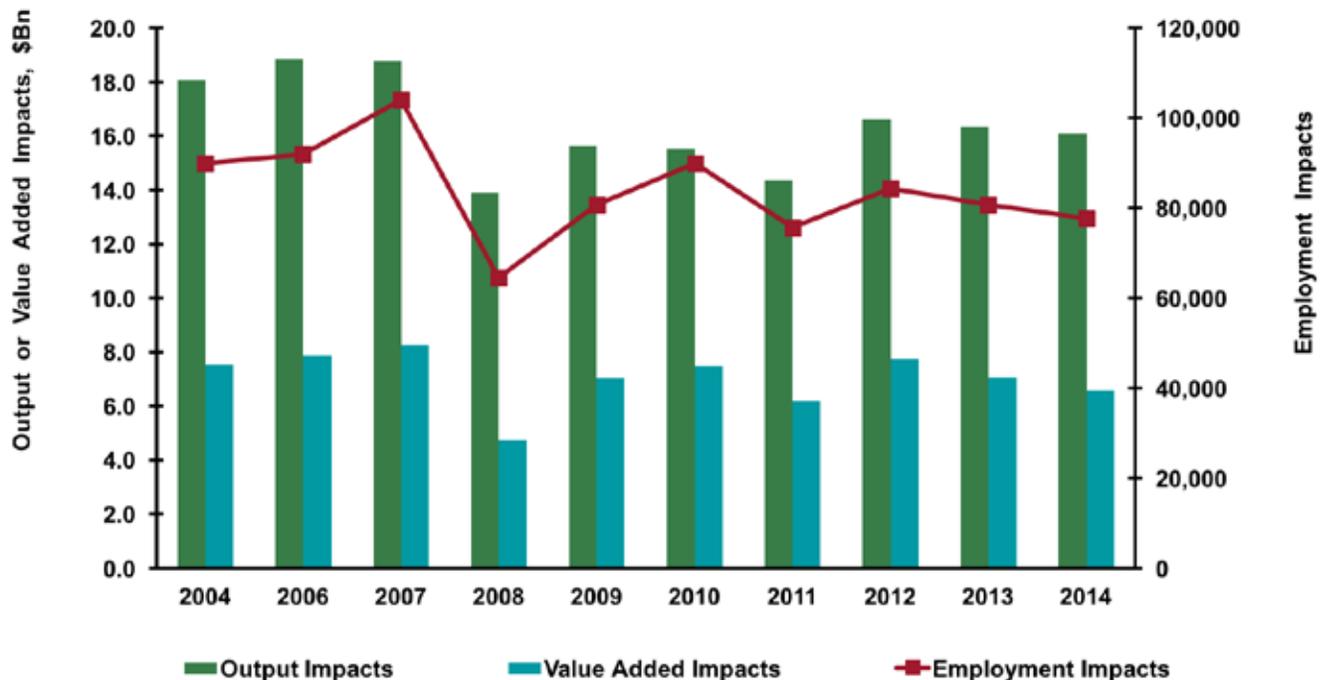

Figure 1. Economic impacts of forestry, wood and paper product manufacturing industries in Florida between 2004 and 2014.

Employment

2014 employment impacts were 77,621 full and part-time jobs, which was 3,044 fewer jobs than in 2013. The 2014 employment in forestry and forest products industry represented a 20% increase over 2008 employment at the lowest point of the Great Recession.

Value Added

At \$6.59 billion, value added impacts were 8% lower in 2014 than in 2013 (Fig. 1), but still 36% higher than in 2008 at the lowest point of the recent recession.

Compensation

In 2014, the pulp and paper products industry supported 72% of income paid to the labor force employed in forestry and related industries. At 14%, secondary wood products sector was the next largest in terms of income paid out to workers. Forest management and logging generated 9% of income, while lumber, veneer and panels manufacturing paid the remaining 5% of wages and benefits in forestry-related occupations in 2014 (Fig. 2). In dollar terms, forestry, wood and paper products industries had income impact of \$3.98 billion in 2014, which was almost 6% less than in 2013, but still nearly 23% more than in 2008 at the bottom of the recent recession.

Florida Forestry, Wood & Paper Product Income Impact Distribution by Industry Sector 2014

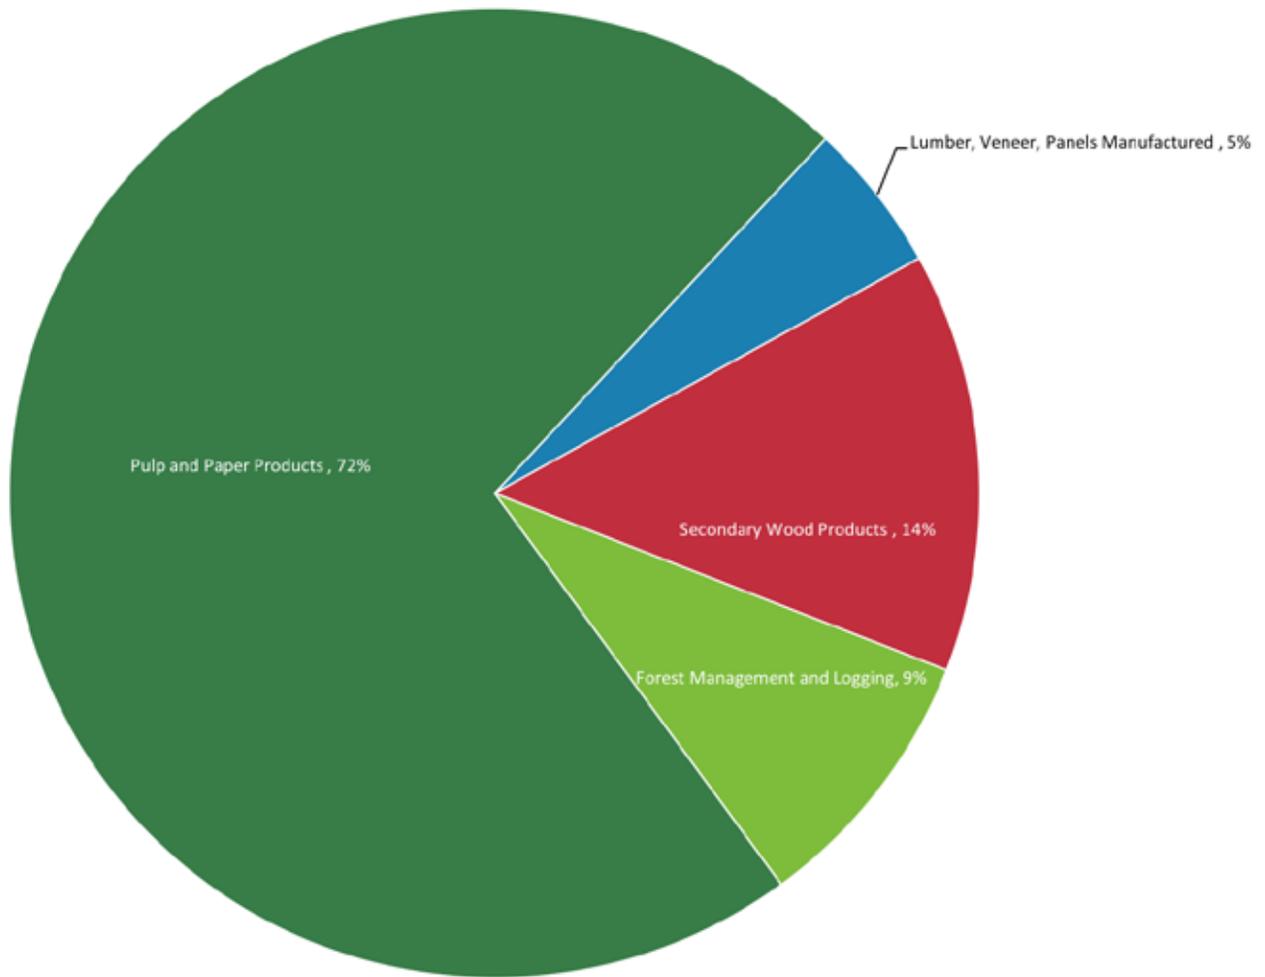

Figure 2. Labor income impacts distribution among forestry, wood and paper product industry sectors in Florida, 2014.

Export Value

At \$5.98 billion in 2014, and similarly to other economic indicators, the export value of Florida's forest products to out-of-state destinations decreased 4% since 2013 (Fig. 3). However, even this smaller value for 2014 was 48% higher than exports in 2008 at the lowest point in the Great Recession of 2007-09.

Exports of Florida Forest Products to Out-of-State Destinations, 2004 - 2014

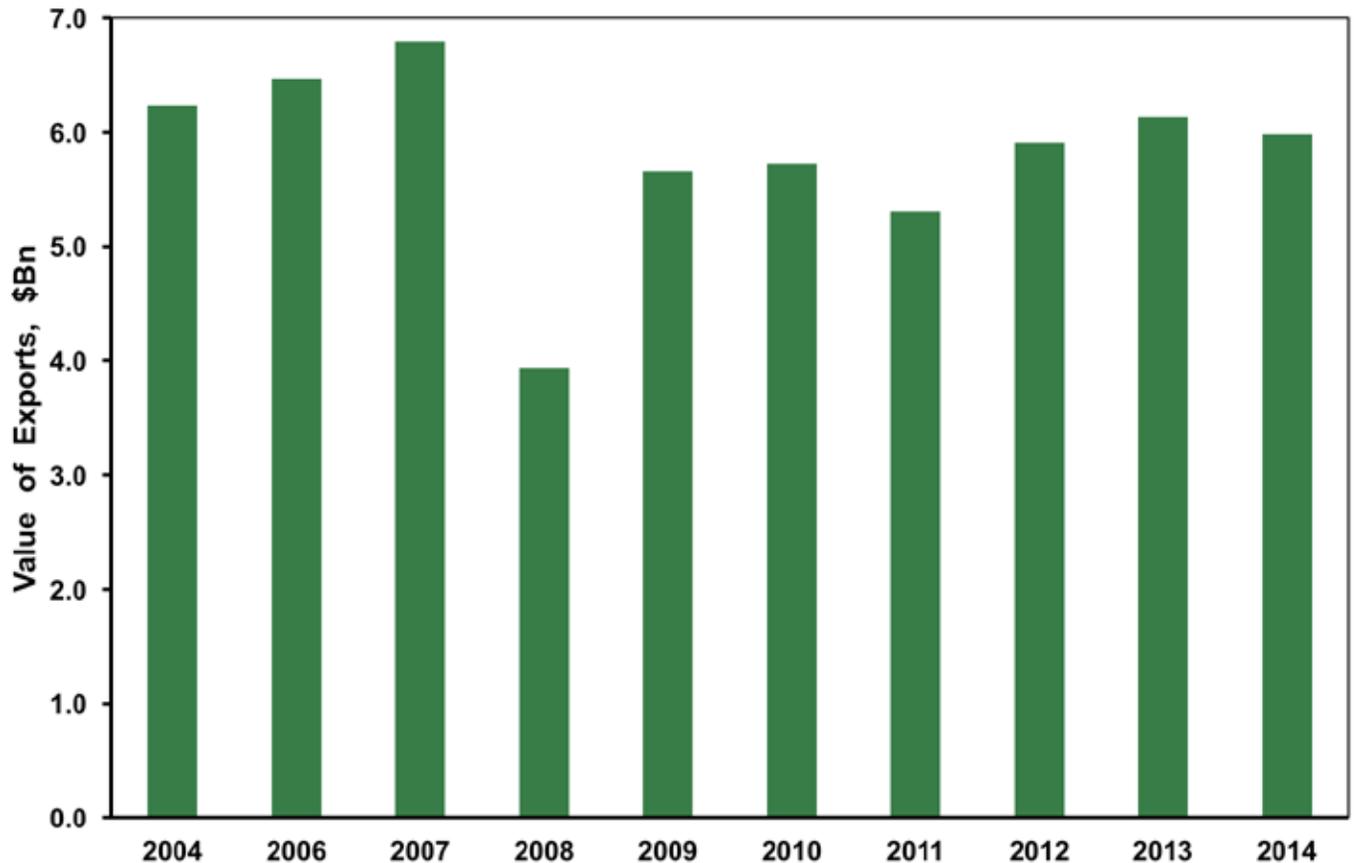

Figure 3. Export value of Florida's forest products to out-of-state destinations between 2003 and 2013.

Fiscal Impacts

In 2014, indirect business tax impacts of forestry and forest products industries in Florida were \$456 million. Of that amount, \$368 million was generated by pulp and paper sector, \$32 million by forest tract management and logging activities, \$43 million by secondary products manufacturing, and \$13 million by lumber, veneer and panel manufacturing industries.

Total other property income impacts, such as interests, rents, royalties and dividends, were \$2.15 billion in 2014. The largest share again was generated by pulp and paper manufacturing at \$1.658 billion. Forest tract management and logging activities generated \$171 million, the secondary forest products sector \$218 million, while lumber, veneer and panels manufacturing generated \$102 million.

Forest Ownership

In 2014, Florida timberland ownership, which supports forest products industry was 71% non-industrial private, 16% state, 11% federal, and 2% local government (Fig. 4). That translates into 11.0 million acres in private ownerships, 2.4 million acres in state, 1.7 million acres in federal, and 0.4 million acres in local government ownerships.

Total Timberland 15.5 Million Acres

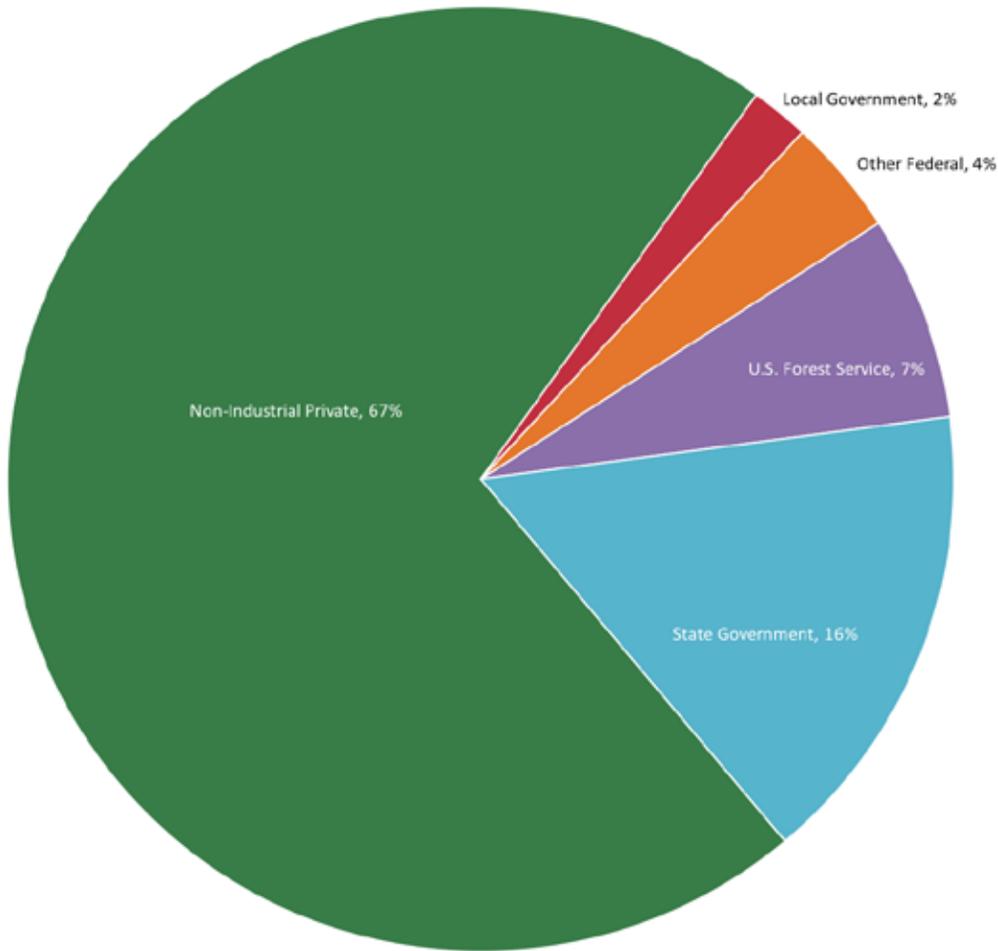

Figure 4. Florida timberland ownership by major ownership sectors, 2014.

Forest Distribution

Although forests cover about 50% of the state's land area, Florida's forest lands are located mostly north of Orlando (Fig. 5). In the northern half of the state most counties are at least 50% forested, whereas the peninsular Florida south of Marion County is less than 50% forested. Liberty County in northwest Florida is the most forested with forest lands covering more than 90% of its area. On the other hand, four counties in the southeast tip of Florida have less than 10% of their area covered in forests (Fig. 5).

Figure 5. Florida forest lands as percentage of county surface area
2014

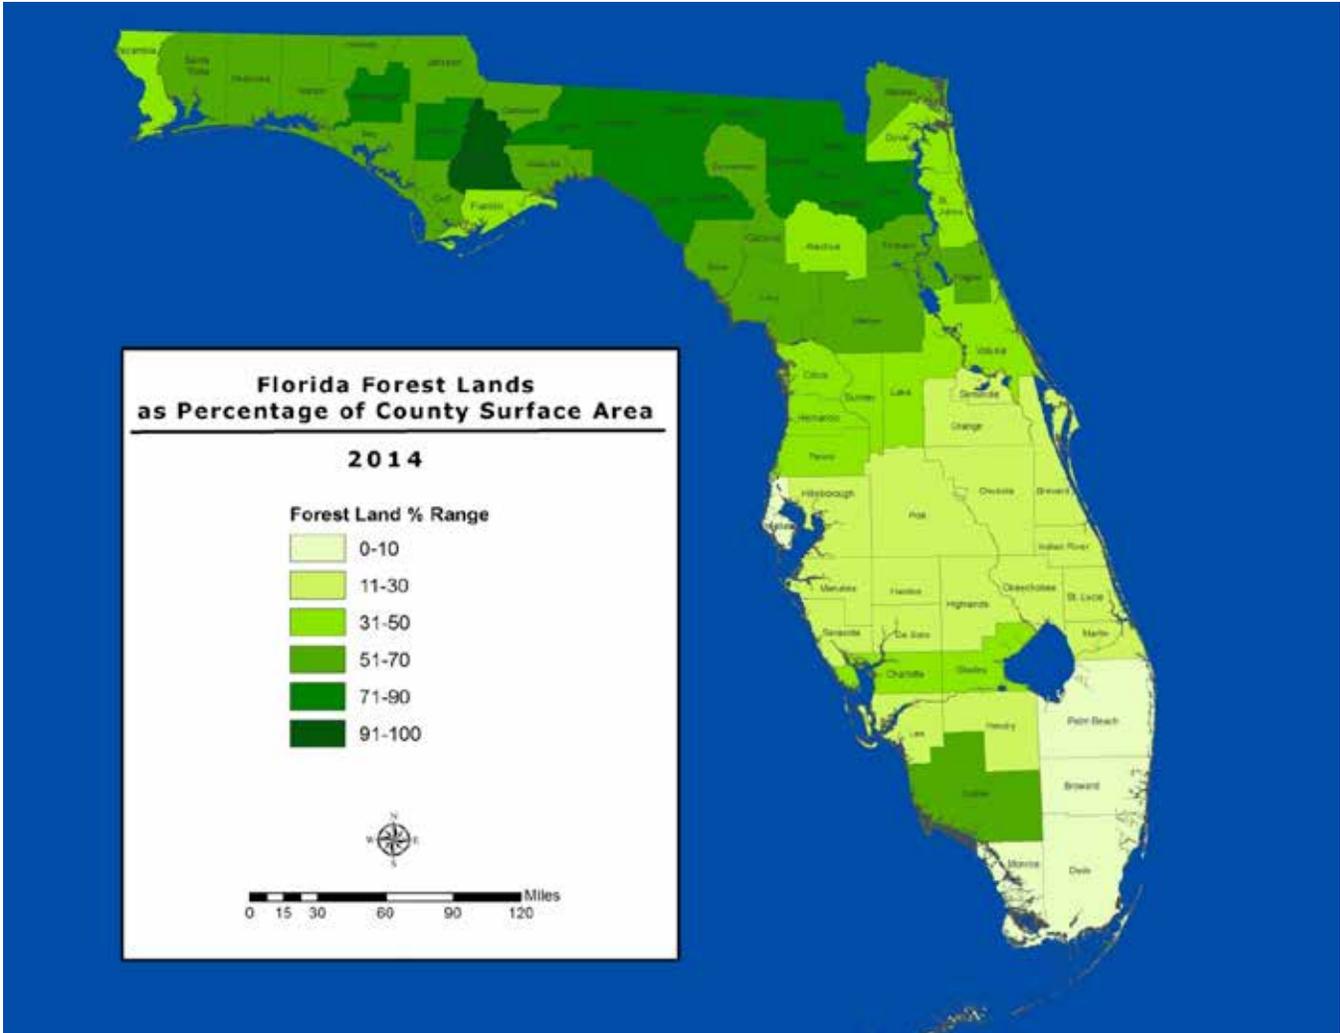

Figure 5. Florida forest lands as percentage of county surface area, 2014.

Local Importance

In 2015, there were 78 primary wood using mills in Florida (Table 1). The local economic importance of forests depends on a number of factors including proximity to markets. The primary wood using mills in Florida are located mostly in the northern part of the state (Fig. 6) in proximity to timberland resources. Depending on type

and size, which dictates raw material needs, they have the biggest economic impact in a zone of 50 to 75 mile radius. This corresponds to an area from which they can purchase wood in the most economical way, providing income to local timberland owners.

				Total	78

Annual Wood Harvest

Between years 2010 and 2014, Florida on average harvested 464.8 million cubic feet of wood annually. Of that amount approximately 90% was harvested from private and 10% from publicly owned timberlands (Table 2). Of all harvested wood 65% was either slash pine

or longleaf pine. Collectively, all southern yellow pines supplied 425.0 million cubic feet, or 91.4% of all harvested wood annually. The remainder of wood harvest consisted of cypress (1.5%) and hardwood species (7.1%).

EXPORTS

FLORIDA'S SEAPORTS

Port Canaveral

Port Canaveral is currently home to eight year-round cruise ships from four major cruise lines. Cargo activity at Port Canaveral is expected to increase significantly with additional deep-water container cargo berths and the further development of bulk cargo facilities to serve the central Florida market. Principal exports for the port include fresh citrus and single-strength juice, juice concentrates, automobiles and heavy equipment.

- Hinterland: The central and north Florida counties of Brevard, Polk, Indian River, Orange, Osceola, Seminole, Volusia and Southeast U.S.

Port Citrus

The effort behind Port Citrus is to establish a new public port within Citrus County to grow the economic vitality and quality of life in the area. The concept behind Port Citrus is to take full advantage of a valuable asset: the Cross Florida Barge Canal.

Port Everglades

Port Everglades is one of the nation's leading container ports and south Florida's main seaport for receiving petroleum products including gasoline, jet fuel and alternative fuels. The total value of economic activity at Port Everglades in FY 2013 (latest data available) was approximately \$26 billion. More than 203,700 Florida jobs are impacted by the port, including almost 11,400 people who work for companies that provide direct services to Port Everglades.

- Hinterland: Primarily south and central Florida but extending into Southeastern United States. Top trading partners are Caribbean and Latin American nations.

Port of Fernandina

The Port of Fernandina provides terminal service to numerous pulp and paper producers located throughout Florida and the Southeast. The containerized commodities moving through the port include wood pulp, automobile and truck parts, steel products, chemicals, beverages, food stuff and chilled goods, machinery, consumer goods and building materials.

- Hinterland: The southeastern U.S. and gulf states; major metropolitan areas include Tampa, Orlando, Jacksonville, Atlanta and New Orleans. As the most westerly port on the East Coast, the Midwest and the Great Lakes region can also be served efficiently.

Port of Fort Pierce

St. Lucie County owns 20 acres at the port, adjacent to 67 acres owned privately, as well as 12 acres that house the privately owned Indian River Terminal. The port's privately-held facilities have serve bulk, containerized and other general cargo traffic moving into the Bahamian and Caribbean islands. Principal imports, through the private terminals, have been aragonite and cement.

- Hinterland: St. Lucie, Indian River, Okeechobee, Highlands, Hendry, Glades and Martin counties.

Port of Jacksonville

The Jacksonville Port Authority (JAXPORT) is an independent agency responsible for the development of public seaport facilities in Jacksonville. It owns three cargo facilities and a cruise terminal, and supports 65,000 jobs and more than \$27 billion in annual economic impact for the northeast Florida region.

- Hinterland: Primarily defined as the U.S. Southeast and Midwest. Jacksonville's geographic location allows JAXPORT inbound cargo to reach 60 million consumers and 60 percent of the U.S. population within a 24-hour truck drive.

Port of Key West

The Port of Key West includes cruise berths at Mallory Square, the Navy's Outer Mole Pier, and the privately owned Pier B at the Weston Resort. The port brings in almost a million total passengers per year resulting in a local business impact of approximately \$85 million. The port also provides 1,260 direct and indirect jobs to the citizens of Key West and contributes 15 percent of the city's total tax revenue.

- Hinterland: U.S. cruise homeports, Florida west coast ferry ports, city of Key West and Monroe County.

Port Manatee

Port Manatee is a multi-purpose deepwater seaport on Tampa Bay serving bulk, break-bulk, container, heavy-lift/project and general cargo customers. Comprised of 1,100 acres, Port Manatee is supported by nearly 5,000 acres of land located just outside the port's gates.

- Hinterland: Florida counties within a 100-mile radius including Lee, Charlotte, DeSoto, Sarasota, Hardee, Polk, Hillsborough, Highlands, Pasco, Hernando, Pinellas and Manatee, as well as the U.S. Southeast, eastern U.S. and Midwest/Chicago area.

PortMiami

PortMiami has been recognized around the globe with the dual distinction of being the Cruise Capital of the World and the Cargo Gateway of the Americas. The port continues to be a powerful economic engine contributing more than \$27 billion annually to the Florida economy and supporting more than 207,000 jobs.

- Hinterland: For east-west trade the hinterland extends from the south Florida counties of Miami-Dade, Broward, Monroe and Palm Beach throughout the state. For north-south trade it includes all of Florida and extends into the Southeast, Northeast and Midwest.

Port of Palm Beach

The Port of Palm Beach generates approximately 2,850 jobs in its community. The 162-acre port is located 80 miles north of the city of Miami and has a 300-foot wide inlet channel. The Port of Palm Beach is an important distribution center for commodities being shipped all over the world, and especially the Caribbean Basin. Operations include containerized, dry bulk, liquid bulk, break-bulk, roll on/roll off and heavy-lift/project cargoes.

- Hinterland: Palm Beach, Martin, St. Lucie, Okeechobee, Highlands, Glades, Hendry, Brevard, Indian River, Monroe, Miami-Dade, Broward, Hillsborough and Orange counties.

Port Panama City

Port Panama City handles more than 1.7 million tons of cargo per year including containerized cargo, copper cathodes, steel plate, steel coils, kraft paper, wood pellets and aggregates. The port provides essential support service for five major manufacturing companies, including two located on the port.

- Hinterland: Northwest Florida, Alabama, Georgia and Tennessee.

Port of Pensacola

From its early shipments of regionally harvested lumber, locally made bricks and sailing ship masts, to the locally manufactured paper and power plant components being moved today, the Port of Pensacola has always existed, at least in part, to serve local and regional business interests.

- Hinterland: Southeastern and Midwestern U.S. roughly bounded by the Great Lakes to the north, the Mississippi River to the west, the Gulf of Mexico to the south and the Atlantic Ocean to the east.

Port of Port St. Joe

Located in Gulf County, Florida, the Port of Port St. Joe offers a deepwater seaport with two separate bulkheads – one featuring nearly 1,900 linear feet at the ship channel turning basin and the other offering nearly 900 linear feet on the Intracoastal Waterway.

- Hinterland: North Florida, Alabama and Georgia.

Port of St. Petersburg

The Port of St. Petersburg, located on Tampa Bay, is exploring opportunities to attract mega yachts, research and other vessels, as well as to further enhance the benefits of a new Research and Development Center on the eastern end of the port.

- Hinterland: Port users would come from other parts of Florida and from around the world as the port focuses on the mega yacht business sector.

Port of Tampa

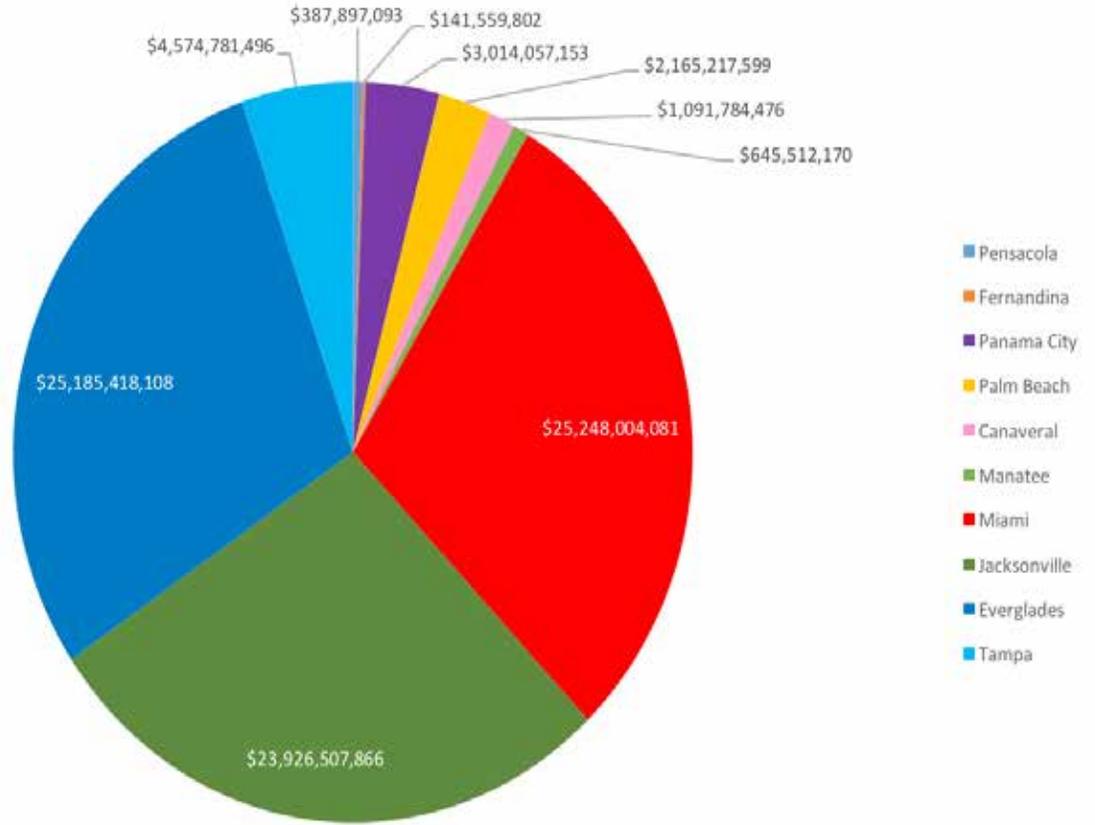

The Port of Tampa is largest of the Florida ports by tonnage and area. It is a vital energy products gateway to West Central Florida and an important global distribution point for fertilizer. The port accommodates a broad mix of bulk, break-bulk, roll on/roll off, neo-bulk and container cargo.

- Hinterland: Central Florida for energy, building, citrus and fertilizer products. As for container cargo, Florida, and through CSX, the U.S. Midwest and entire eastern seaboard.

FLORIDA EXPORTS INFORMATION

In 2015, Florida exported over \$4.04 billion in agricultural goods, the seventh highest agricultural export value among U.S. states. This placed Florida one rank higher than in 2014. 2015 was the fourth year in a row that

agricultural exports exceeded \$4 billion in value. Florida exports grew at a 7.3% average annual rate between 2005 and 2015. Meat products remain the most valuable category at over \$598 million.

FLORIDA COOPERATIVE EXTENSION SERVICE AND EXTENSION IFAS/UF OFFICE LOCATIONS

Extension service is a partnership between state, federal, and county governments to provide scientific knowledge and expertise to the public. The University of Florida (UF), together with Florida A&M University (FAMU), administers the Florida Cooperative Extension Service.

At the University of Florida, Extension service is located in the Institute of Food and Agricultural Sciences (IFAS), along with the College of Agricultural and Life Sciences (CALS) and the Florida Agricultural Research and Education Center, and is called UF/IFAS Extension.

UF/IFAS Extension encompasses thousands of Extension faculty members, scientists, educators, administrative staff, and volunteers, all working to provide solutions for your life.

www.solutionsforyourlife.com is the web site of University of Florida Extension Service. You can explore topics in lawn and garden care, family life and consumer choices, agriculture, community development, the environment, and youth development. Above all, our site is focused on getting you timely and relevant solutions for improving your life.

AGRICULTURE STATISTICS AND OTHER INFORMATION

AGRICULTURAL STATISTICS AND OTHER INFORMATION

Internet

NASS national and state reports and data are available on the world wide web, the Internet.

National Homepage

www.nass.usda.gov

The national homepage has links to all agency products and services such as publications, graphics, historic data, State information, statistical research, Census of Agriculture, a search engine and a Published Estimates Data Base to query and download State or county historic data. There are also links to our Customer Service unit, a Kids Page, and all other federal statistics outside the National Agricultural Statistics Service.

For a monthly summary of USDA estimates, forecasts and projections of commodities, prices, trade issues, and world crop developments, see:

www.nass.usda.gov/Publications

Florida Homepage

www.nass.usda.gov/fl

The Florida web site offers much of the same information as the national homepage but in a format designed for Florida customers. The reports contain the same statistics but offer more details about agriculture in Florida. Links are also available to other sites such as the Florida Department of Agriculture, University of Florida and other NASS field offices.

Printer Reports and Computer Format

All NASS reports are still printed on paper. Census reports are only available while supplies last; contact the Florida office for a copy. NASS also offers a wide variety of data on CD-ROM with national, State, and county statistics. Most of these products are in MS Excel spreadsheet format or comma separated (CSV) files.

A listing of all paper reports and computer products can be found in the Products & Services catalog issued every December. To order a free Products & Services catalog or purchase paper reports or CD-ROMs, call:

1-800-999-6779

Or visit:

www.nass.usda.gov/Publications/catalog.pdf

E-Mail Subscriptions

Free e-mail subscriptions are available via automated mailing lists for National and State reports. You can subscribe to individual reports and they will be sent directly to your e-mail address soon after the official release time.

National, State and News Reports via E-mail

National reports contain statistics from all states and are the most timely source of data.

State reports are distributed after national reports but they usually contain more local information. For more information, see:

www.nass.usda.gov/Publications/index.asp

Follow NASS

or for State

www.nass.usda.gov/Statistics_by_State/index.asp

Select a State, In the [I Want to... box], select Subscribe to ?? reports

Auto-Fax

Selected NASS reports and information items are available from a free fax service called NASS-Fax. To receive the items, use a touch tone telephone connected to your FAX machine to call:

202-720-2000

Voice prompts will guide you to selected items of interest. The first time you access the system, request **Document number 0411** which will provide a listing of the information that is available in reports.

JOIN THE “FRESH FROM FLORIDA” PROGRAM

“Fresh From Florida” is a program administered by the Florida Department of Agriculture and Consumer Services. It is designed to connect distributors and retail buyers with Florida growers to increase sales of Florida products.

To learn more about the program benefits, visit FreshFromFlorida.com/Join or call 850-617-7399.

FLORIDA STATE FARMERS MARKETS

Providing Essential Marketing Infrastructure

State Farmers' Markets assist in the marketing of farm products by providing modern marketing facilities to move products from the farm to the consumer. There are 12 state Farmer's Markets that offer attendant services such as refrigeration, truck weigh scales, packing houses, coolers, offices, farm supplies, restaurants, produce brokerage sales, and produce and freight shipping companies. Through volume production and marketing, effective competition is assured for both small and large growers and buyers.

AGRI BUSINESS IS GROWING
