May 10, 2012

The data below is provided in response to a request for citrus data in the new approved Congressional District 17. The boundary of the new District 17 includes all of Charlotte, DeSoto, Glades, Hardee, Highlands, and Okeechobee Counties and portions of Hillsborough, Lee, Manatee, and Polk Counties. Data for these counties and portions of counties have been aggregated and rounded to the nearest 100 acres, million trees, and million boxes of production.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Citrus Acreage, Trees, and Production – Florida Congressional District 17: 2010-2011 Season

Variety	Acreage	Trees	Production
	(acres)	(1,000 trees)	(1,000 boxes)
All Citrus	288,300	37,000	91,000
