WEATHER SUMMARY: Scattered rains eased dry soil conditions in many central and some northern Peninsula localities during the week of May 27 through June 2. However, drought conditions still exist in some west coast areas from Naples to Pensacola while some northern Peninsula localities remain extremely dry. Storms dropped from traces to over five inches of rain during the week with nearly all localities receiving at least a trace. Immokalee reported about five and a quarter inches of rain for the week, while Homestead recorded over two and a half inches. The Palmetto-Ruskin region reported from traces to an inch falling. Ft. Pierce reported receiving about three and three fourths inches. Temperatures at the major stations averaged normal to two degrees above during the week. Daytime highs were in the 80s and 90s while nighttime lows were mostly in the 60s and 70s. Tallahassee recorded at least one low in the 50s.

FIELD CROPS: Topsoil and subsoil moisture supplies are mostly very short to short with localities receiving recent rains reporting adequate soil moisture. Dry soils in some localities continue to delay the planting of peanuts and soybeans with planting in wetter areas becoming more active. Irrigated corn, sugarcane, tobacco, and cotton are in good condition. Producers indicate that 86 percent of peanuts are planted compared with 78 percent last week, 81 percent last year and the five-year average of 91 percent. Peanut condition is 10 percent poor, 70 percent fair and 20 percent good.

LIVESTOCK AND PASTURES: In the Panhandle, the pasture condition is very poor to fair and forage for hay is short due to drought. There is no significant improvement yet in pasture condition following recent rains. In the northern counties, the pasture condition is poor to fair. The pastures are suffering from drought. The cattle condition is only fair. Stock ponds are very low or dry. Very little hay has been cut. In the central areas, severe drought continues in most localities. The drought, coupled with very hot weather, has turned the pastures brown. In the west central and southern counties, range and pasture grass began to grow following recent rains. The cattle condition remains mostly fair. Statewide, the condition of the cattle is mostly fair.
