

### ACREAGE INCREASES SLIGHTLY

There were 941,471 acres of commercial citrus in Florida as of December 1969, according to the Florida Crop and Livestock Reporting Service. This is a net increase of only 1 percent over the inventory total of 931,249 acres found on aerial photography taken in December 1967.

There were 18,639 acres set in 1968 and 17,697 in 1969, down sharply from the annual rate of about 52,000 acres set during the period from 1960 through 1967.

### OLDER COMMERCIAL ACREAGE DECLINES

Photos show a reduction of 26,114 acres, or 2.8 percent, in acreage that was commercial in December 1967. Loss from attrition, including urbanization, hit all ages of trees but, significantly, half of the reduction came in acreage set during the last ten years.

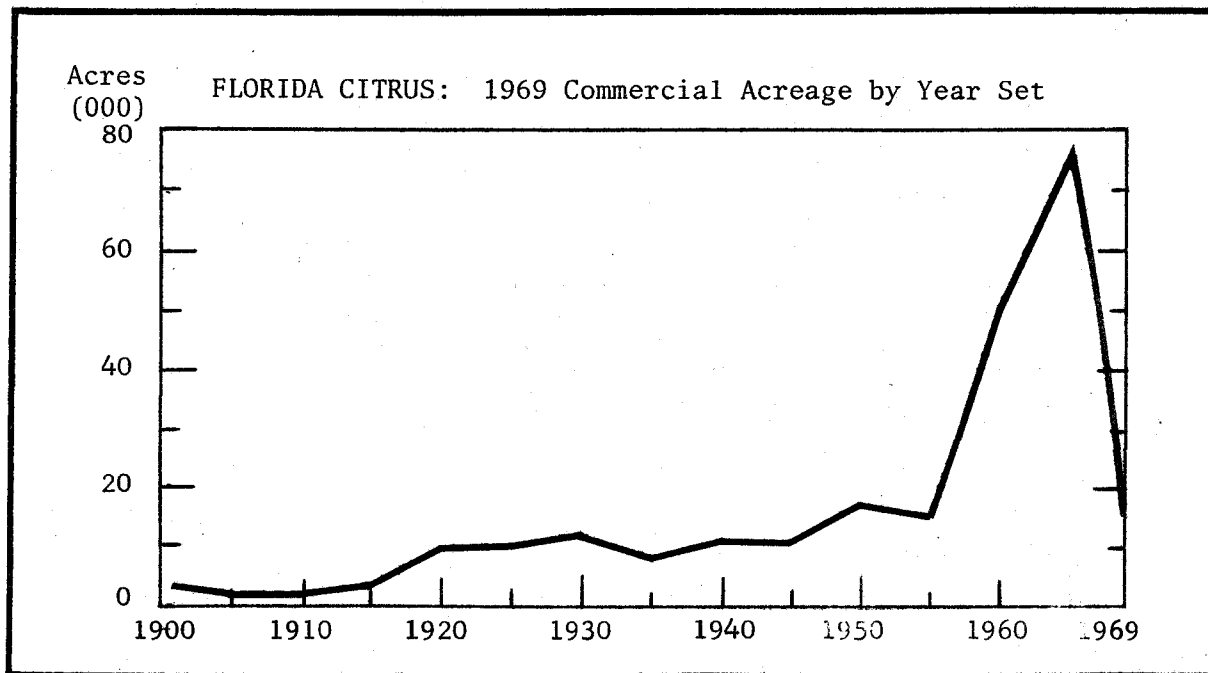

### GRAPEFRUIT ACREAGE UP, ORANGES UNCHANGED

The most significant increase occurred in grapefruit with a net gain of just 4,167 acres. The increase was entirely in seedless varieties. Oranges just barely stayed ahead of acreage set as of December 1967. With the exception of Temples, specialty types all increased above the 1967 reported acreage.

### SIXTEEN COUNTIES HAVE NET GAIN

Sixteen of the 35 commercial citrus counties showed a net gain over the 1967 acreage. Counties with greatest increase were: Indian River with 3,896 acres; DeSoto had 3,741 acres; Lee 3,285 acres; Hendry 2,459 acres and Martin 2,228 acres. Dade had a 16 percent increase in lime acreage.

Nineteen counties did not maintain the level of commercial acreage surveyed in 1967. Those with greatest net acreage loss were: Orange, down 2,044 acres; Seminole, down 1,351; Hillsborough, 1,002; Brevard, 771; and Pinellas 547 acres.
