Statistical Reporting Service

## ACKNOWLEDGEMENTS

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida are official State and USDA estimates prepared by the Crop and Livestock Reporting Service. Corresponding data for other citrus states are from official reports of the USDA Statistical Reporting Service. Shipment and market price data are from the Marketing Bureau Section and USDA's Agricultural Marketing Service. Canned and frozen pack statistics were compiled by the Florida Canners Association and the National Canners Association. Where data are from other sources, appropriate footnotes appear.

Records of the Citrus and Vegetable Inspection Division of the Florida Department of Agriculture were employed in production and utilization estimates. The Growers Administrative Committee assisted in developing production estimates. The Florida Citrus Commission reproduced this bulletin.

Many producers, shippers, canners, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contribution is sincerely appreciated.

Publications Committee,  
Paul E. Shuler

## CITRUS SUMMARY

### HISTORY 1/

The citrus tree is a native of the Orient. It was carried ever westward and was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518.

The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Petro Medendez, dated April 2, 1579, it appears that citrus fruits were growing in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the State.

The oldest cultivated grove planted in Florida (Hume, 1926, p. 95) is thought to be the Don Phillippe grove in Pinellas County, planted some time between 1809 and 1820. The site is now the Don Phillippe Park and is just north of Safety Harbor.

Citrus production in Florida had reached the all time high of 6 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It took fourteen years to reach this level of production again.

Florida surpassed all other States in citrus acreage in 1932-33 with 265,400 acres, which accounted for 46 percent of the United States total acreage.

### PRODUCTION

The crop year of 1961-62 saw Florida's orange production passing the hundred million mark for the first time, with a record crop of 113,400,000 boxes. This pushed the total citrus production to an all time high of 153,740,000 boxes. Florida's 550,500 acres of bearing groves comprised 66 percent of the Nation's citrus acreage and provided 76 percent of the total United States production.

California in 1919-20 accounted for 60.3 percent of the total United States production, but by 1961-62 had dropped to 19 percent of the total United States tonnage with 38,140,000 boxes on 190,800 acres. California's largest crop was reached in 1944-45 with 76,880,000 boxes produced.

Texas had a phenomenal expansion of bearing citrus acreage from only 600 acres in 1920-21, to 122,500 in 1948-49. Most of this acreage was grapefruit. Then came the freezes of 1949-50 and 1950-51, which reduced acreage to 38,100 acres, but by 1960-61 acreage had increased to 76,000 acres.

Texas production was reduced from the 1945-46 high of 28,800,000 to 500,000 in 1951-52, but by 1960-61 it had increased to 10,300,000 boxes. A freeze in January, 1962, reduced 1961-62 production to 5,000,000 boxes and left the trees in such condition that only a token of production would occur in 1962-63.

### TREE NUMBERS

It is estimated that there are 35.0 million producing citrus trees growing in commercial groves in the State of Florida. Of these, 27.9 million are orange trees of which 13.2 million, or 47.3 percent, are early and mid-season type. Of the total orange production of 113,400,000 boxes in 1961-62, 56,900,000 boxes, or 50.2 percent, were early and mid-season type (including Temples). Late type orange trees number 14.7 million, or

52.7 percent of the orange tree total, and accounted for 56,500,000 boxes, or 49.8 percent of the orange production.

Of the 6.1 million grapefruit trees, approximately 32 percent are seedy type and 68 percent are seedless type. Seedy type accounted for 11,200,000 boxes, or 32 percent, of a total of 35,000,000 boxes, and seedless type produced 23,800,000 boxes, or 68 percent of the total grapefruit.

Tangerines accounted for approximately 2.6 percent of the total citrus production in 1961-62, with a little less than 1.0 million trees producing 4,000,000 boxes.

Lime trees accounted for 5,700 acres and produced 340,000 boxes in 1961-62.

Freezing weather during December, 1962, reduced Florida's tree numbers, and reduced bearing surface on many surviving trees. This will curtail Florida's production in the immediate years ahead.

Tree numbers were based upon the continuing tree count survey. The 1962 estimates were made prior to the freeze.

### NON-BEARING ACREAGE

It is estimated that as of June 30, 1962, there were 243,000 acres of non-bearing citrus trees planted in Florida. This consists of 220,300 acres of oranges; 2,200 acres of Tangerines; 7,100 acres of Murcotts; 5,500 acres of Tangelos; 4,400 acres of grapefruit; 2,900 acres of lemons and limes; and 600 acres unknown.

### PRICES

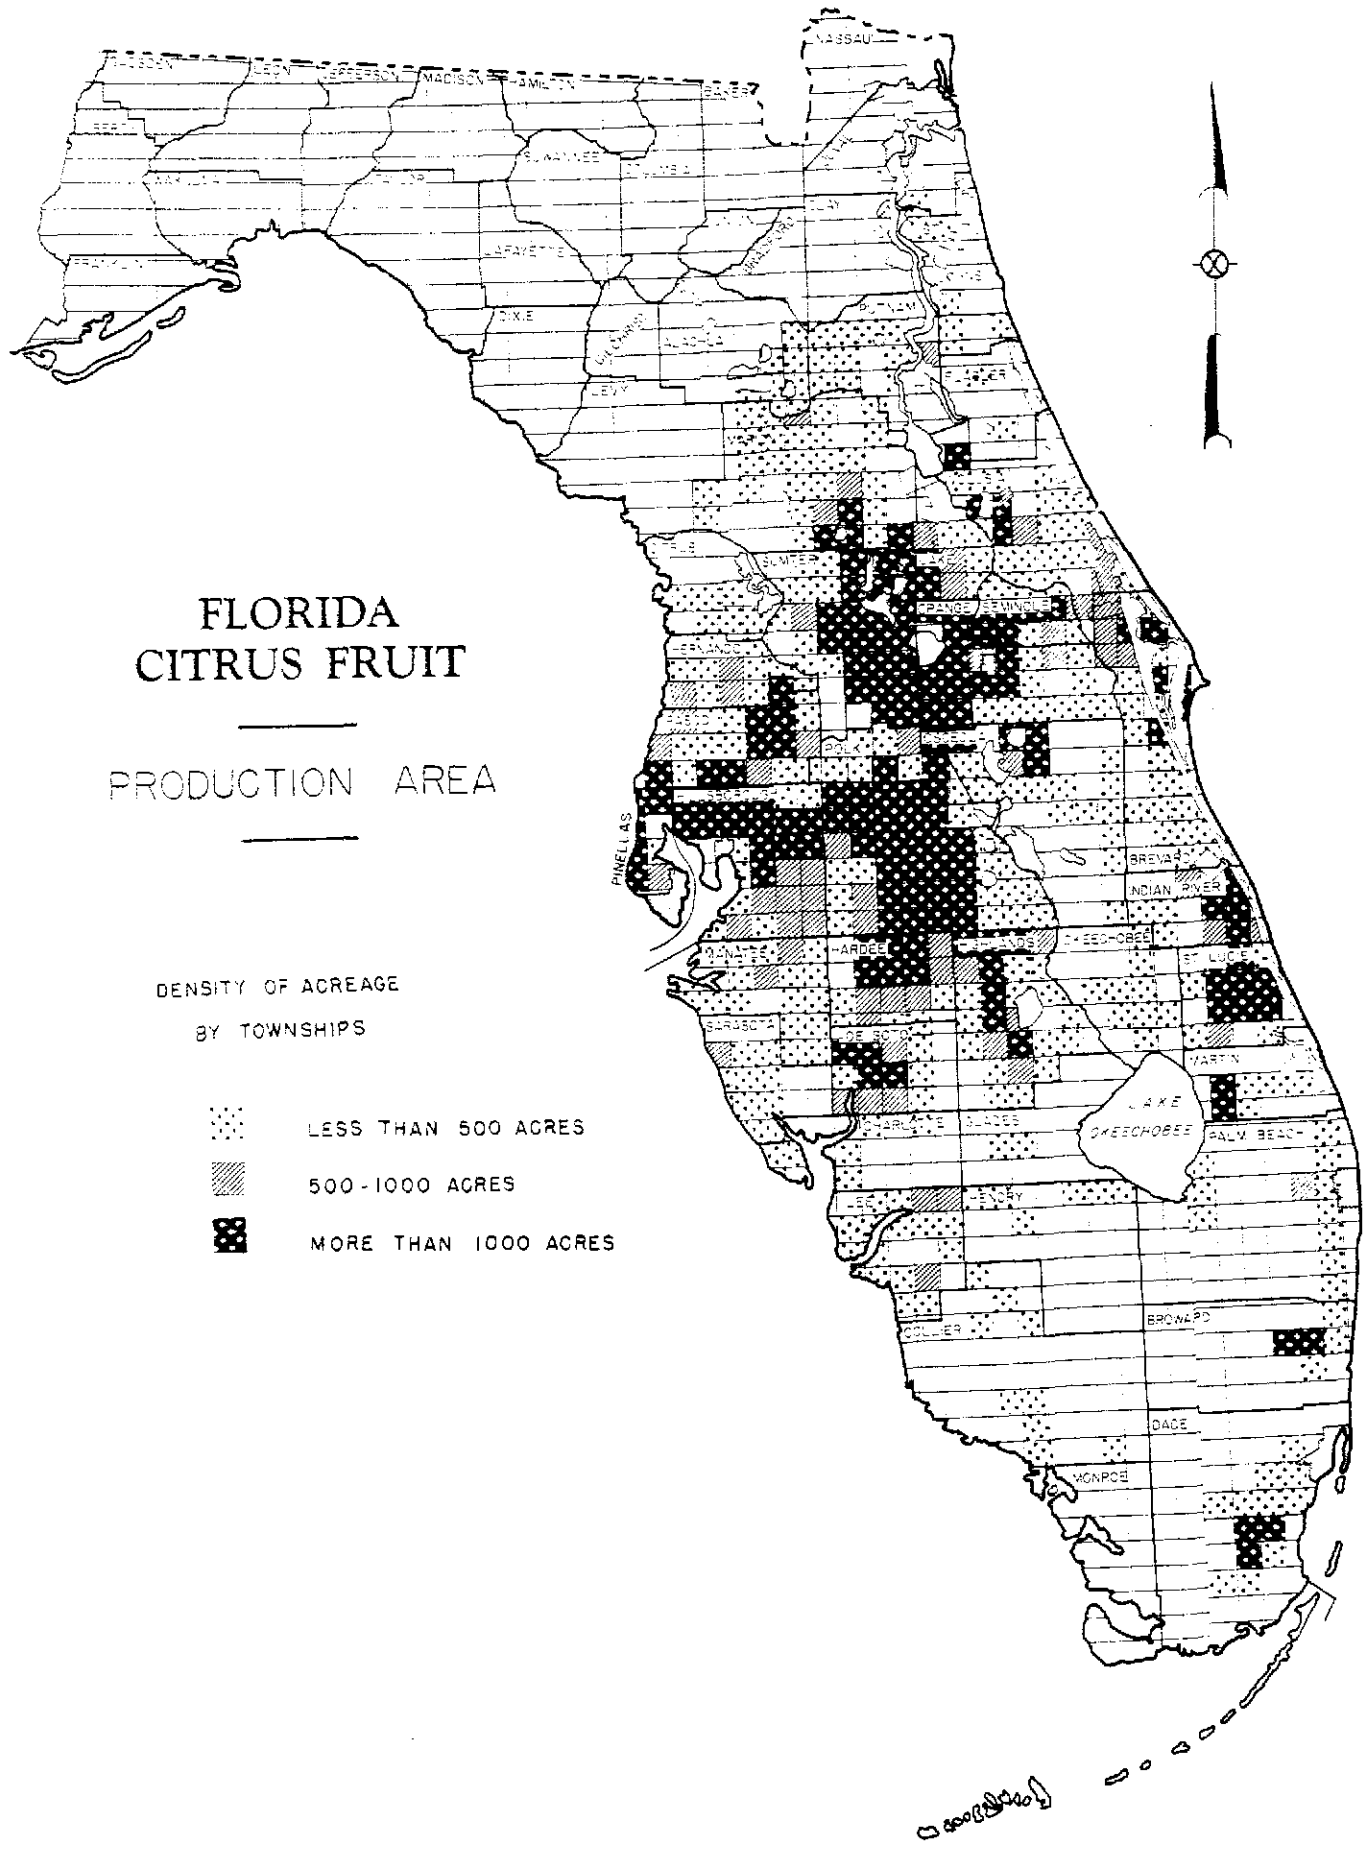

Prices have varied from the lows of the late thirties, when for the crop year of 1938-39 the equivalent on-tree from all methods of sale returned 22 cents per box for grapefruit, to the high of 1949-50 when equivalent on-tree return for grapefruit, all methods of sale, climbed to \$1.79 per box. In the 1961-62 crop year the grapefruit price was 68 cents.

Oranges returned \$1.66 per equivalent box for all methods of sale for 1961-62. This is below the previous record high of \$2.98 per box in the 1960-61 crop year. The record low post-war price was in 1947-48 when only 63 cents per box was received.

The on-tree crop value of all citrus fruit to Florida growers for the 1961-62 crop year was \$221,548,000, or only 74.7 percent of the record high of \$296,505,000 for the 1960-61 crop year.

1/ See Citrus Industry by Webber & Batchlor, pages 19, 22, 25, and 27.

NOTE - Net contents of box varies. The Florida citrus code defines an equivalent standard box of fruit as 90 pounds for oranges and Tangelos, 85 pounds for grapefruit and 95 pounds for Tangerines. These weights have been used in these statistics for Florida. Texas average weights are 90 pounds for oranges, and 80 pounds for grapefruit. Louisiana and oranges average 90 pounds per box. California and Arizona use a smaller box. California weight averages are: oranges, 75 pounds; grapefruit, 65 pounds; and lemons, 76 pounds. Arizona average weights are: oranges, 75 pounds; grapefruit, 64 pounds; and lemons, 76 pounds.
