ACKNOWLEDGEMENTS

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida are official State and USDA estimates prepared by the Crop and Livestock Reporting Service. Corresponding data for other citrus states are from official reports of the USDA Statistical Reporting Service. Shipment and market price data are from the Marketing Bureau Section and USDA's Agricultural Marketing Service. Canned and frozen pack statistics were compiled by the Florida Cannery Association and the National Cannery Association. Where data are from other sources, appropriate footnotes appear.

Records of the Citrus and Vegetable Inspection Division of the Florida Department of Agriculture were employed in production and utilization estimates. The Growers Administrative Committee assisted in developing production estimates. The Florida Citrus Commission reproduced this bulletin.

Many producers, shippers, canners, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contribution is sincerely appreciated.

CITRUS SUMMARY

PRODUCTION

In the crop year of 1965-66 Florida's citrus production totaled 140,515,000 boxes. This was again a sizeable increase as trees recovered from the severe freeze which occurred in December, 1962, and is not far below the record crop of 153,740,000 boxes harvested in 1961-62. Florida's 596,400 acres of bearing groves comprised 70 percent of the Nation's citrus acreage and provided 69.6 percent of the total United States production.

California in 1919-20 accounted for 60.3 percent of the United States production. In 1965-66 production was 26 percent of the Nation's total tonnage with 55,200,000 boxes on 184,200 acres. California's largest crop was reached in 1944-45 when 76,880,000 boxes were produced.

Texas had a phenomenal expansion of bearing citrus acreage from only 600 acres in 1920-21, to 122,500 in 1948-49. Most of this acreage was grapefruit. Then came the freezes of 1949-50 and 1950-51, which reduced acreage to 38,100 acres, but by 1959-60 acreage had increased to 71,000 acres. No estimate of acreage has been made since the 1962 freeze.

Texas production was reduced from the 1945-46 high of 28,800,000 to 500,000 in 1951-52, but by 1960-61 it had increased to 10,300,000 boxes. A freeze in January, 1962 occurred, but the trees had recovered enough that 5,100,000 boxes were produced in 1965-66.

Arizona's production in 1965-66 amounted to 7,620,000 boxes, which was a record in production for this state.

TREE NUMBERS

In the 1965-66 season, there were 39.1 million producing citrus trees growing in commercial groves in the State of Florida. Of these, 31.5 million are orange trees of which 15.3 million, or 49.3 percent, are early and mid-season type. Of the total orange production of 100,400,000 boxes in 1965-66, 51,500,000 boxes, or 51.3 percent, were early and mid-season type (including Temples). Late type orange trees number 16.2 million, or

50.7 percent of the orange tree total, and accounted for 48,900,000 boxes, or 48.7 percent of the orange production.

Of the 5.6 million grapefruit trees, approximately 30 percent are seedy type and 70 percent are seedless type. Seedy type accounted for 11,200,000 boxes, or 32 percent, of a total of 34,900,000 boxes, and seedless type produced 23,700,000 boxes, or 68 percent of the total grapefruit.

Tangerines accounted for approximately 2.5 percent of the total citrus production in 1965-66, with a little less than 1.0 million trees producing 3,600,000 boxes.

Lime trees accounted for 3,500 acres and produced 415,000 boxes in 1965-66.

Tree numbers were based upon the continuing tree count survey.

NON-PRODUCING ACREAGE

It is estimated that as of October, 1965, there were 312,400 acres of non-producing citrus trees planted in Florida. This consists of 275,000 acres of oranges; 5,400 acres of Tangerines; 10,900 acres of Murcotts; 10,700 acres of Tangelos; 10,400 acres of grapefruit; and 1,200 acres of other citrus. Lemons and limes are not included.

PRICES

Prices received in 1965-66 were below the prices of the preceding year. Oranges, on-tree, all methods of sale, were \$1.63 and grapefruit \$1.50 per box.

Prices in the past World War II period have varied from the record highs of 1963-64, when the on-tree price for oranges averaged \$4.44 and grapefruit averaged \$2.24, to the lows of 1947-48. It was this latter year when oranges returned only 63 cents per box, on-tree, and grapefruit 26 cents per box, on-tree, for all methods of sale.

VALUE

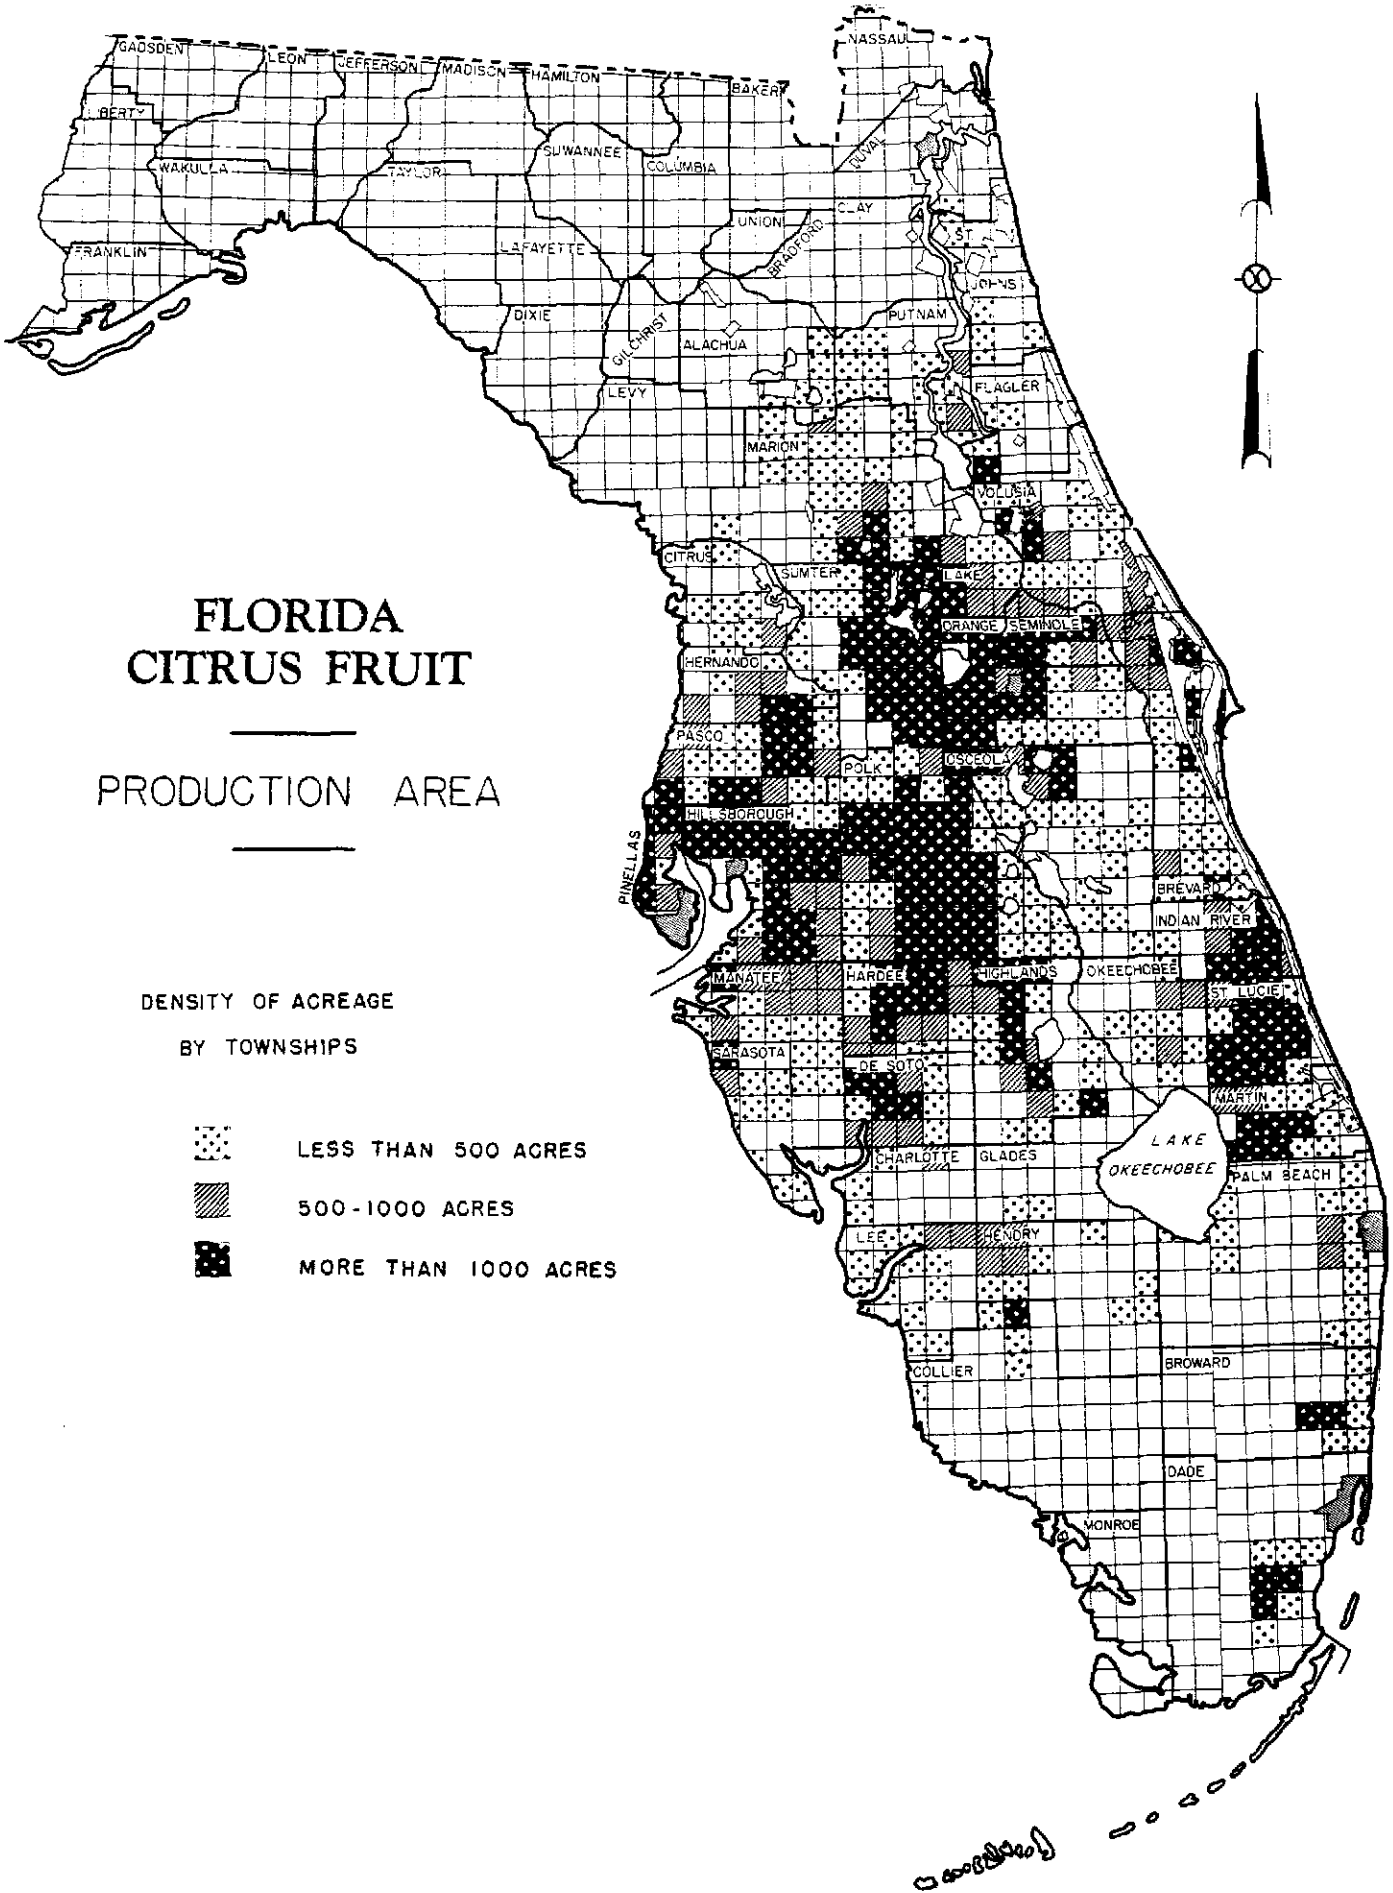

Florida, All Citrus: Value of Sales, On-Tree
Crop Years 1956-57
through 1965-66

Year	Value	Year	Value
1956-57	\$ 172,580,000	1961-62	\$ 247,258,000
1957-58	213,138,000	1962-63	247,785,000
1958-59	289,769,000	1963-64	331,889,000
1959-60	220,021,000	1964-65	271,117,000
1960-61	296,516,000	1965-66	227,952,000

NOTE - Net contents of box varies. The Florida citrus code defines an equivalent standard box of fruit as 90 pounds for oranges and Tangelos, 85 pounds for grapefruit and 95 pounds for Tangerines. These weights have been used in these statistics for Florida. Texas average weights are 90 pounds for oranges, and 80 pounds for grapefruit. Louisiana oranges average 90 pounds per box. California and Arizona use a smaller box. California weight averages are: oranges, 75 pounds; grapefruit, 65 pounds; and lemons, 76 pounds. Arizona average weights are: oranges, 75 pounds; grapefruit, 64 pounds; and lemons, 76 pounds.
