

FOREWORD

This citrus publication is the ninth Annual Citrus Statistical Summary released by the Agricultural Marketing Service and is made possible through the cooperation of the Florida Department of Agriculture and the Florida Citrus Commission. The Office of the Agricultural Statistician, Agricultural Marketing Service, Orlando, cooperating with the State Department of Agriculture and Growers Administrative Committee collected and/or assembled the data. The Florida Citrus Commission furnished funds for materials and did the actual multilithing.

The Agricultural Marketing Service, through its office in Orlando, would like to take this occasion to express its appreciation of this cooperative spirit shown by those connected with the Citrus Industry and to acknowledge the statistical and financial aid of the Citrus Commission, the Citrus and Vegetable Inspection Division, Florida Department of Agriculture, the Growers Administrative Committee, the cannery data furnished by the Florida Cannery Association and the considerable volume of basic data given by the citrus growers, packers and processors.

February 1957

HISTORY - 1/

The Orient gave to the world one of its richest treasures in the citrus tree. Since its first discovery the cultivation of the citrus tree has moved ever westward, from the Far East to India to the Eastern Mediterranean to Italy to Spain. Each new area soon surpassed the old in production and this was to continue true for the New World. Columbus brought the first citrus seeds to the Americas November 22, 1493. Other expeditions also brought along citrus seeds, and between July 12 and July 20, 1518, the first were planted on the mainland in Central America by the expedition of Juan de Grijalva.

The exact date of the introduction of citrus fruits into Florida is unknown. From a statement made by Petro Medendez, dated April 2, 1579, at St. Augustine, it appears that citrus fruits were growing in abundance there at that time, so it is justifiable to assume that they were brought by the first settlers in 1565.

Early settlers in Florida, some two centuries later, found wild citrus groves scattered over the State.

PRODUCTION

The growth of the Florida citrus industry was spasmodic until 1894-95 when the Great Freeze hit Florida. That year production had climbed to 6 million boxes, which was almost totally wiped out by the Freeze. Fourteen years passed before Florida equaled this production again.

Florida surpassed all other States in citrus acreage in 1932-33 with 265,400 acres, accounting for 46 percent of the United States total acreage. By 1955-56 Florida's 522,700 acres of producing groves were producing 69 percent of the citrus produced in the United States on 64

1/ See the Citrus Industry by Webber & Batchlor, pages 19, 22, 25 and 27.

percent of the total United States acreage. This was 134,000,000 boxes for Florida out of United States total of 195,695,000 boxes. During this period of Florida's citrus history other areas also increased in production. In 1919-20 California accounted for 60.3 percent of the total United States production, but by 1955-56 had dropped to 28 percent of the total United States production with 53,780,000 boxes. California's largest crop was produced in 1944-45 with 76,880,000 boxes produced. Texas had a phenomenal expansion of citrus acreage between 1920-21, when only 600 acres were planted, to 1948-49 with its 122,500 acres. Most of this acreage was grapefruit. Then came the freezes of 1949-50 and 1950-51. The Texas bearing citrus acreages for 1955-56 as shown at 24,954 acres of oranges and 25,200 acres of grapefruit (and 549 acres for tangerines, lemons and limes) are based on a derived figure using 65 trees per acre and trees of 5 years old and older as reported by United States Department of Agriculture, Bureau of Entomology and Plant Quarantine July 1, 1955. This report is as follows:

Kind of tree	<u>Number of growing trees of age</u>					TOTAL
	1	2	3	4	5+	
White Grapefruit	4,159	4,974	2,354	412	521,233	533,132
Pink Grapefruit	338,308	391,296	228,698	88,465	1,105,085	2,151,852
Oranges	117,556	169,514	107,909	64,408	1,622,051	2,081,438
Tangerines, Lemons and Limes	5,644	4,792	503	660	35,695	47,294

NOTE: Net contents of box varies. For California and Arizona, 77 pounds for oranges, 65 to 68 pounds for grapefruit. Florida and other States use a larger box with oranges 90 pounds and grapefruit 80 pounds.

TREE NUMBERS

It is estimated that there are more than 33.5 million producing citrus trees growing in commercial groves in the State of Florida. Of these, 24.8 million are orange trees of which 13.6 million, or 55 percent, are Early and

Midseason type. Of the total orange production of 91,000,000 boxes in 1955-56 51,500,000 boxes or 57 percent were Early and Midseason type. Late type orange trees number 11.2 million, or 45 percent of orange tree total, and accounted for 39,500,000 boxes or 43 percent of the orange production.

Of the 7.3 million grapefruit trees in Florida, approximately 57 percent are Seedless type and 43 percent are Seeded type trees. Seeded type accounted for 14,300,000 boxes or 46 percent out of a total of 38,300,000 boxes, and Seedless type produced 20,600,000 boxes or 54 percent of the total grapefruit.

Tangerines accounted for approximately 3.5 percent of the total Florida citrus production in 1955-56, with 1.4 million trees, producing 4,700,000 boxes.

Lime trees accounted for 6,600 acres and produced 400,000 boxes in 1955-56.

NON-BEARING ACREAGE

It is estimated that as of June 30, 1956 there are 94,500 acres of non-bearing citrus trees planted in Florida. This means that for the next four years there will be added to the bearing acreage of Florida citrus an average of approximately 23,600 acres per year, and by 1960 Florida bearing total acreage will be approximately 617,200 acres.

PRICES

Prices have varied from the lows of the late thirties, when for the season of 1938-39 the equivalent on-tree from all methods of sale returned 22 cents per box for grapefruit, to the high of 1949-50 when equivalent on-tree return for grapefruit, all methods of sale, climbed to \$1.79 per box and in the 1955-56 season were 57 cents. Oranges varied from on-tree equivalent for all methods of sale of 52 cents in the season of 1939-40 to a high of \$2.37 in 1945-46 and were \$1.83 per box in the 1955-56 season.

REVISIONS

Tree counts have been revised in the counties of Broward, Hardee, Highlands, Lake, Lee, Orange, Pinellas and Polk by the count made by the State Plant Board in the cooperative tree census.
