AVOCADO PRODUCTION AND VALUE

FLORIDA: Production of avocados for the just completed 1997-98 season is estimated at 960,000 bushels, up 2 percent from the previous season. Trees have completely recovered from the storm affected 1993-94 season and those planted since then are producing limited amounts of fruit.

Bearing acreage is estimated at 5,700 acres, the same as last season. Maturity of the crop was advanced 3 to 4 weeks with demand reported strong most of the season.

The average price for fruit delivered to the packing house door is \$14.60 per bushel, up from \$13.20 last season, with the total crop value at a near record \$14,016,000.

OTHER STATES: California's 1996-97 production which ended harvest last October is down slightly to 6.6 million bushel equivalents. Average prices and total value were up slightly. Hawaii production continued to decline with prices and value also down slightly.

MANGO PRODUCTION AND VALUE

Production of mangos in Florida for commercial shipments remained at an estimated 100,000 bushels with the price decreasing to \$14.50 per bushel. Bearing acreage is

down from last year to 1,400. Bloom problems and disease at fruit set time is limiting production.

LEMON PRODUCTION AND ON-TREE VALUE

Lemon production decreased to 120,000 boxes with the average price per box at \$6.55. "True" lemon varieties are

shipped fresh with some processed, and all of the Meyers are processed.

LIME PRODUCTION

Lime production for the just completed 1997-98 season is 29 percent higher than the previous season. Trees

in Dade County planted after the storm are beginning to produce increasing amounts of fruit.
