Georgia Crop Progress and Condition Report

November 15, 2021

General
According to the National Agricultural Statistics Service in Georgia, there were 5.8 days suitable for fieldwork for the week ending Sunday, November 14, 2021. Precipitation ranged from trace amounts of rain to 1.4 inches. Average high temperatures ranged from the mid 60s to the mid 70s. Average low temperatures ranged from the mid 30s to the high 40s.

Crops
Harvest season continued around the state as crop conditions remained relatively good, although scattered showers slowed down harvest activities. Many areas reported their first frost of the year on Sunday. The remaining cotton was defoliated as harvest picked up. Cotton quality was again noted to have been negatively affected by wet conditions throughout the fall. Peanut fields neared completion on being dug as harvest continued to progress. Peanut producers made sure to dig fields in adequate time to avoid frost damage. Soybean harvest progressed well, although slightly delayed as some producers focused on wrapping up cotton and peanut harvest. Pecan harvest continued as yields were noted to be lower than anticipated. Cover crops continued to be planted.

Livestock and Pastures
Livestock remained in generally good condition throughout the state. Producers began feeding hay and stockpiling forages for livestock. Pasture conditions continued to decline as temperatures dropped.
