HAWAII AGRICULTURE 2000

Diversified Agriculture Overcomes Adversity to Post Record Returns

Farm level revenue for 2000 totaled \$521 million, 2 percent less than 1999, but still the second highest total in the past 9 years. The sixth record high year in a row for the diversified agriculture sector came up shy of offsetting the effects of lower sugar prices and the closure of two sugar operations. Pineapple, the State's leading commodity, held steady with the previous year. Drought-like conditions continued to plague many areas of the State for the third year, seriously impacting orchard crops such as fruits, coffee, and macadamia nuts, as well as cattle grazing. In spite of the weather, and global price declines for some commodities, diversified agriculture posted farm level revenues at a record \$357 million, 4 percent above the 1999 record.

Highlighting gains in the diversified sector were record farm receipts for vegetables and melons, ginger root, flowers and nursery products, aquaculture, seed crop research and sales, and bananas, along with gains posted for tropical specialty fruits, papayas, and cattle. Improved prices helped boost cattle receipts, but the increase was also, in part, a result of increased marketings as ranchers were forced to reduce herd sizes due to drought-related scarce forage supplies. Drought and low prices also adversely affected macadamia nut and coffee production and returns.

The equivalent farm value of pineapple production (does not include the value added by processing) surpassed \$100 million for the second year in a row, just slightly above the previous year. A small increase in production and an increase in the value of processed utilization offset a decline in the value of fresh sales.

The equivalent farm value of sugarcane (does not include the processed value of raw sugar) fell to \$62 million, \$24 million below 1999. Culprits for the decline were lower world (and foreign government subsidized) prices for sugar, and the phasing out of some operations during the year. At years' end there was optimism among the remaining sugar companies that the futures of their operations were viable and acreage and production would stabilize or increase.

Farm level values are an important measure of production agriculture, but they don't truly reflect the total contribution of agriculture to the State and county economies. Adding the values of sugar and pineapple processing raises the total to \$585 million for 2000, but even that is still incomplete. For a better understanding of other value added contributions and the direct and indirect business activity associated with agriculture refer to "Accounting for the linkages of Agriculture in Hawaii's Business Economy with an input-output Model: A Final Demand-Based Approach" By University of Hawaii Agricultural Economists Khem R. Sharma, PingSun Leung, and Stuart Nakamoto.

Cash Receipts of Agricultural Commodities, State of Hawaii, 1970-99

Dry Year Impacts Agriculture Sectors

Despite a few additional days of showers during the year, the absence of consistent rainfall continued to hamper agriculture again in 2000. Although the predominately trade wind weather brought cloudy days and scattered light to moderate showers to all areas, the majority of days were warm and sunny with strong, gusty trade winds. As in the previous year, crops which depend on rainfall failed to make good progress. Such crops included coffee, macadamia nut, avocado, guava, and other fruits. Pastures were also adversely affected by the lack of moisture, since they depended on natural rainfall for growth and rejuvenation. Ranchers continued to reduce their herds due to the deteriorated pastures. Although irrigated crops fared better with the stable weather and consistent water, some farms were adversely affected by both mandatory and voluntary water conservation measures implemented during the year. Despite the increase in moist periods over the previous year, the overall condition of the State was still dry, especially the leeward sections of Maui and Hawaii islands.

January-April

The first two weeks in January were fair to good for agriculture. Days were mostly sunny to partly cloudy with light to moderate showers. Towards the end of the third week, a shear line brought dark clouds and heavy showers to the islands; followed by strong winds which further hindered field operations and damaged crops. The rains continued into the fourth week and caused some flooding in fields that were already saturated by

the previous week's rain. Weather became sunnier in February with less rain, giving farmers a chance to catch up on field activities. Despite the absence of significant rainfall, the sunny days, cool nights, and gentle winds, along with regular irrigation enhanced crop progress. March brought more sunny, dry weather which benefitted most crops. However, the prolonged dry spell caused growing concern among farmers and water officials, and water restrictions were issued. Trade wind showers falling during the end of the month brought some relief, but more rain was needed. A cold front from the northwest brought much needed rain in early April. The heavy showers hit Kauai with 4 inches of rain and moved down the island chain, dropping about 3 inches on many windward areas. Considerably lighter rains fell on leeward areas, which remained relatively dry throughout the month. Gusty winds early in the month hampered spraying and irrigation as well as causing leaf and fruit damage. A decrease in winds and shower activity created favorable weather for the rest of the month.

May-September

The first half of May experienced gentle trade winds, light windward showers, and longer days with warmer temperatures. The remainder of the month received generally dry weather, especially in the leeward areas. Increased spraying and irrigation was necessary to maintain crop progress. Pastures and non-irrigated orchards continued to feel the adverse effects of lack of moisture. Dry, sunny

conditions marked the beginning of summer in June. Irrigated crops made fair to good progress, while pastures and non-irrigated crops remained in fair to poor condition. Light, scattered showers brought some relief, but additional rainfall was needed to replenish soil moisture. Summer rains in July brought some relief, but more rainfall was needed. Temperatures climbed into the upper 80's; occasionally reaching 90 degrees F. The remnants of Hurricanes Gilma and Hector brought some moderate to heavy showers in late August to central Oahu and windward sections of Hawaii. Leeward areas remained dry.

October-December

The record thunderstorm on the Big Island punctuated the rainy season on November 1 and 2. Nearly 37 inches of rain fell on windward Hawaii within a 24 hour period. Ka'u macadamia nut orchards suffered the heaviest nut and tree loss due to flooding and erosion. Puna anthurium and tropical flower growers reported 30-50 percent losses due to flooding. The flood waters also damaged roads, green houses, and irrigation systems. Livestock losses of goats and some cattle were reported along with damage to barns, warehouses, and other structures. Control measures were increased to control plant diseases stimulated by the wet conditions. On a positive note, the rain brought much needed moisture to the parched areas of Kona, South Kohala, Maui, and Molokai. The remainder of the year ended with generally fair weather; leeward areas returned to their dry condition.

Net farm income ¹	45,613	76,269	65,510	62,799	63,904

¹ Final sector output is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the Hawaii economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2000 SUGAR AND SPECIALTY CROP HIGHLIGHTS

SUGAR

Sugar production for 2000 decreased 18 percent from the previous year to 301,000 tons of 96° raw sugar. Declines in both the acreage for harvest and yield accounted for the lower production. Plantations harvested 2.4 million tons of sugarcane with an average yield of 72.5 tons per acre. Sugar prices during 2000 dipped 12 percent to \$309 per ton of 96° raw sugar, resulting in a value (including molasses) of \$95.9 million, a 27 percent decrease from 1999. Closure of two sugar plantations on Maui and Kauai accounted for the declines in acreage and production.

COFFEE

Hawaii farmers harvested a total of 8.7 million pounds of coffee (parchment basis) during the 2000-2001 season, down 13 percent from the previous season. Farm prices across the State averaged \$2.65 per pound (parchment basis) for the 2000-2001 season, up 26 percent from the previous season. Total farm value of the 2000-2001 crop is estimated at \$23.1 million (parchment basis), up 10 percent from the 1999-2000 season. Coffee growers across the State harvested a record high 6,800 acres during the 2000-2001 season, up 6 percent from last season.

Coffee production in Hawaii county totaled 3.8 million pounds (parchment basis) during the 2000-2001 season, up 27 percent from the previous season and the largest harvest of Big Island coffee since the 1970-1971 season's 4.1 million pounds (parchment basis). The 2000-2001 season got off to a late start due to dry weather reducing the initial round of flowering, but a combination of additional acreage and beneficial showers from late spring into summer eventually resulted in a larger than expected crop.

Maui, Honolulu, and Kauai counties combined to produce an estimated 4.9 million pounds (parchment basis) of coffee for the 2000-2001 season, down 30 percent from the previous season's record high, and the lowest total in four seasons. A major factor for the decline in production was the adverse affect that prolonged dry weather has had on some trees.

MACADAMIA NUTS

Hawaii's 2000-2001 macadamia nut crop is estimated at 50.0 million pounds net, wet-in-shell, 6.5 million pounds below the previous season's crop. The decline was due to adverse weather, lower prices, and less harvested acreage. Weather conditions had mixed effects on orchards depending on location. The Kona area continued to experience dry weather, while early November rains caused flooding in a major Ka'u orchard, resulting in crop and tree losses. Those same rains brought some relief to parched South Kona orchards. Lower prices also caused growers to abandon acreage and to replant with coffee or other crops. Overall yields averaged 2,820 pounds per acre (net, wet in-shell), down 170 pounds from the previous season.

Total acreage in crop dropped 1,500 acres from the previous year to 18,400 acres and the lowest total since the 1984-85 crop year. Harvested acreage also declined by 1,200 acres totaling 17,700 acres. More acreage was abandoned this season due to a large orchard on Maui discontinuing macadamia nut operations.

The farm price for net, wet in-shell macadamia nuts averaged 59.0 cents per pound, down 8.0 cents from the 1999-2000 average. The farm value for the 2000-01 crop is estimated at \$29.5 million, down 22 percent from the previous year. Hawaii growers continued to feel the impact from increased world competition.

¹ Coffee harvesting occurs throughout the year in Hawaii. The main harvest normally begins in late summer and extends to the early part of the following year.

² Average yields based on parchment equivalent marketings and harvested acreage.

³ Expressed in parchment equivalent pounds. Coffee marketed in cherry form was converted to an equivalent parchment weight and added to parchment marketings.

⁴ Represents an average farm price for parchment equivalent sales. Obtained by dividing farm revenues from the sale of cherry and parchment coffee by total marketings (parchment equivalent basis).

⁵ Kauai and Maui combined with Honolulu to avoid disclosure of individual operations.

GINGER ROOT

The farm value of Hawaii's 1999-2000 ginger root crop is estimated at a record high \$8.9 million, up 11 percent from the previous season. The record revenue was generated by a 32 percent increase in the average farm price that more than offset a 16 percent decline in production.

At 66.0 cents per pound, the 1999-2000 average farm price was the third consecutive year of increase, but was also well below the record high farm price of 92.3 cents per pound reached during the 1981-1982 season. The previous record high for farm revenue was set during the 1996-1997 season at \$8.1 million.

Hawaii farmers harvested 13.5 million pounds of ginger root during the 1999-2000 season, down 16 percent from the previous season. The main reason for the decline in output was a 23 percent decrease in harvested acreage to 270 acres, the lowest total in four years.

Offsetting some of the decline in harvested acreage was a 9 percent increase in average yields to 50,000 pounds. The improvement in yields was mainly a result of improved weather conditions in the windward area of the Big Island which accounts for most of the State's ginger root.

GINGER ROOT: Acreage, yield, production, price, and value, State of Hawaii, 1996-2000

FLORICULTURE AND NURSERY PRODUCTS

Grower sales of Hawaii's flower and nursery products totaled a record \$83.4 million in 2000. Wholesale value for 2000 was 10 percent higher than the \$75.7 million value for 1999. Cut flowers, orchids, foliage, and potted flowering plant categories registered increases in 2000.

Hawaii county, with \$47.8 million in sales, ranked number one in 2000. Honolulu farmers registered sales of \$24.2 million, 11 percent higher than 1999. Maui county sales totaled \$9.9 million, 1 percent higher than last year. Kauai sales, pegged at \$1.5 million, were 6 percent lower than a year ago.

2000 FRUIT HIGHLIGHTS

Hawaii fruit growers harvested 810.9 million pounds of fruit for fresh and processed utilization in 2000, up 3 percent from 1999. Fruit acreage totaled 27,822 acres, 4 percent less than the previous year. Compared with 1999, pineapple, papaya, banana, guava and avocado output were all higher. Lower outputs were experienced by the other fruits. Pineapple continued to account for the majority of 2000's total fruit utilization with 87 percent. The farm value of all fruits totaled \$132.9 million in 2000, an increase of 2 percent from 1999, the highest on record, and mainly due to an increase in the banana value. Farm values were also up for papaya, pineapple, guava, avocado, and other fruits. Honolulu County ranked first for fruit value, with pineapple the top contributor.

● BANANA

Banana growers harvested a record 29.0 million pounds in 2000, up 18 percent from the previous year and increasing for the fourth consecutive year. Maturing Cavendish acreage on Hawaii and Honolulu Counties was the main reason for heavier yields and higher utilization. Hawaii Apple bananas also experienced increases in acreage and output. Total acreage statewide as of February 2001 was a record high 1,710 acres, 50 acres less than February last year. Harvested acreage totaled 1,550 in 2000, up 130 acres from a year earlier. Growers planted 160 additional acres in 2000. The farm price for all varieties of local bananas averaged 36.0 cents per pound in 2000, up 1.0 cent from the previous year. The farm value reached a record \$10.4 million with higher output and price.

● PAPAYA

Fresh papaya utilization totaled 50.3 million pounds in 2000, 28 percent higher than last year, accounting for 92 percent of the total papaya utilization. About 52 percent of the fresh sales went to out-of-state destinations. Very dry conditions in non-irrigated orchards during June and July 1999 and again in February and March 2000 reduced flowering. The State's harvested papaya acreage is estimated at 1,650 acres for 2000, 15 percent lower than 1999. From the August 2000 inventory, Kapoho variety made up 40 percent of the State's total acreage. Another 40 percent was planted in Rainbow and Sunup varieties which are resistant to papaya ringspot virus. Sunrise made up 15 percent. In recent years, papaya plantings have increased in areas outside the Island of Hawaii. The result has been an increase in the amount of fresh fruit produced from Kauai and Oahu. Farm prices for fresh sales averaged 31.6 cents per pound in 2000, down 8.6 cents from a year ago.

● PINEAPPLE

Fruit harvested for fresh sales totaled 244 million pounds in 2000, unchanged from the 1999 total. Fresh sales accounted for 34 percent of the total pineapple production. Fresh pineapples averaged \$585 per ton compared to \$594 from the previous year's price. Processed pineapple utilization totaled 464 million pounds in 2000, up 1 percent from 1999. Pineapples for processing averaged \$130 per ton compared to \$126 for the previous year.

2000 VEGETABLE, MELON, AND TARO HIGHLIGHTS

VEGETABLES AND MELONS

Total production of vegetables and melons for 2000 is estimated at 97.7 million pounds, down 2 percent from 1999's record high output. Despite the drop in production, farm revenues were at a record high \$45.5 million, up 6 percent from 1999.

Although weather conditions remained generally dry in 2000, the overall situation did not get severe enough to adversely affect the vital flow of irrigation water to farmers. As a result, average yields were higher for a majority of the State's vegetables and melons as crops benefitted from generally sunny skies, moderate temperatures, and adequate irrigation.

Leading all individual vegetables and melons in terms of farm value were tomato growers with \$8.6 million in 2000, up 9 percent from 1999. Watermelons were a distant second at \$3.2 million, up 32 percent. Tomatoes also lead all individual vegetable and melons in terms of volume with a 2000 harvest of 16.5 million pounds, down 2 percent from 1999's record-high of 16.8 million pounds. A boost in yields kept head cabbage growers in second place with production estimated at 14.6 million pounds, up 2 percent from 1999 and the second largest harvest in the past 8 years.

TARO

Hawaii taro production is estimated at 7.0 million pounds for 2000, up 3 percent from 1999 and the highest total since 1978. The combined farm price for poi and Chinese taro averaged 53 cents per pound in 2000, unchanged from the record high achieved in 1998. The boost in production, combined with steady farm prices, enabled taro farmers to post farm revenues of \$3.7 million, up 3 percent from 1999 and a new record high.

Taro for processing totaled 6.8 million pounds in 2000, up 5 percent from 1999. Most of the processed taro is made into poi. In 2000, that amount totaled 6.7 million pounds, an 8-percent increase from 1999. Weather conditions were generally favorable for taro growing with mostly sunny skies and adequate water available for most of the year. The absence of any major flooding also helped taro growers. In addition, farmers continued to refine cultural practices to combat the persistent presence of the Taro Pocket Rot disease and the destructive presence of Apple snails.

2000 CATTLE, MILK, AND HOG HIGHLIGHTS

CATTLE

Beef production, during 2000, totaled 39.8 million pounds, live weight, 5 percent above 1999 marketings. The increase in production resulted from more cattle and calves marketed overall as well as from proportionally more cattle marketed than lighter weight calves. Exports during 2000 totaled 51,000 head, accounting for about 70 percent of all cattle sold. The majority of exports were calves weighing less than 500 pounds, live weight. Local commercial slaughter, during 2000, dipped 3 percent from 1999 to 17,000 head.

The annual average price for all cattle and calves increased 9 percent to \$48.20 per cwt., an increase resulting from improved prices for calves exported. Cash revenues for 2000 totaled \$19.2 million, an increase of 14 percent from 1999. The inventory of cattle and calves on Hawaii's ranches totaled 150,000 head on January 1, 2001, a decline of 9 percent and 13 percent from 2000 and 1999, respectively. The island of Hawaii which accounts for more than 70 percent of the State's total, recorded a 4 percent drop in inventory to 110,100 head. The third year of drought forced many ranchers to reduce their herds due to the lack of forage supplies.

MILK

In 2000, Hawaii's dairy cows produced 116.3 million pounds of milk compared to 119.7 million pounds produced a year earlier. About 67 percent of the milk was produced on Oahu, outer islands accounted for the remainder. Statewide revenues for milk sold at the farm level during the year totaled \$28.1 million, 10 percent below the 1999 receipt, and the second year of decline. Producers received an average \$24.50 per hundredweight for milk delivered to the processors, \$2.00 less than a year ago. The number of milk cows was down 500 head to 8,100 head in 2000. The annual average output per cow is 14,358 pounds compared to 13,919 pounds produced in 1999. Kauai discontinued producing milk in September 2000.

HOGS AND PIGS

Pork production and the number of hogs marketed during 2000 declined 11 percent from 1999 to 5.6 million pounds and 31,000 head, respectively. Cash receipts from marketings totaled \$4.4 million, a decrease of 13 percent from 1999. There were 26,00 hogs and pigs on hand on December 1, 2000, 2,000 fewer than 1999. The island of Oahu inventory decreased to 15,000 head, less than 60 percent of the State inventory, a drop resulting from a variant-like strain of Porcine Reproductive and Respiratory Syndrome (PRRS) that occurred early in the year.

* = Less than 500 head.

¹ Excludes live hogs brought in for immediate slaughter.

2000 POULTRY AND EGG HIGHLIGHTS

Egg production for 2000 totaled 143.4 million eggs, 4 percent below 1999's production of 149.0 million eggs and the tenth consecutive year of decline, the lowest since 1960. The average number of layers on hand during 2000 was 604,000, the lowest since 1960 and the twelfth consecutive year of decline. Cash receipts from egg sales during 2000 was \$10.6 million, 2 percent below 1999. The total number of egg-type chickens on hand in Hawaii on December 1, 2000 was 722,000 birds, fractionally above 1999. The 722,000 birds consisted of 609,000 layers and 113,000 non-laying pullets. The 609,000 layers was 4 percent above a year ago.

Source: The Association of American Plant Food Control Officials and the Fertilizer institute.

¹ An estimate of the total tonnage for 2000 was set equal to 92% of the 1999 tonnage based on information provided by industry representatives. The total tonnage was proportioned into the tonnage for the individual materials and grades in the same ratio as in the original TVA estimate. The specific materials and grades reported are based on a TVA estimate from about 1989 that have been carried forward and adjusted each year as above.

DEFINITION OF TERMS

AGRICULTURE entails all operations performed on a "farm" in connection with planting, growing, and harvesting of crops; raising and feeding of livestock and poultry, and management. All operations in connection with preparation of farm products for market where the preparation does not alter the form of the product and transportation to the first delivery point. In Hawaii, the first delivery point is defined as the processing plant or packinghouse door or other receivers' establishment for marketings on the island of production. For off-island marketings, the first delivery point is generally the shipper's warehouse.

FARM is a place with estimated (or expected) annual sales of agricultural products of at least \$1,000.

CROP PRODUCTION is the estimated amount of crop harvested and transferred at the first delivery point. Production estimates of vegetables and fruits include the quantity for fresh market and processing use.

ACREAGE IN CROP is the total acreage standing in a specific crop regardless of age or condition unless it has been declared abandoned by the operator.

ACREAGE HARVESTED is the total area harvested or partially harvested during the reporting period. A permanent or semi-permanent planting that was harvested for only a portion of the year is counted in its entirety. Acreage lost before maturity due to natural or economic factors is not included. Acreage harvested and planted repeatedly during the year is counted each time.

YIELD is the average production per acre of merchantable quality harvested and sold or utilized. This is derived by dividing total production by harvested acres.

LIVESTOCK OPERATION is defined as a place that has one or more head of the species on hand at any time during the year. It does not have to meet the definition of a farm.

LIVESTOCK PRODUCTION is the estimated amount of livestock and livestock products sold. This includes allowance for amount used on farms where produced.

FARM PRICE is a computed price to value agricultural production which may or may not reflect the average price at which actual transfer of ownership took place but which is comparable with the definition of "agriculture". See "agriculture" for the definition of pricing point.

MARKET SUPPLY includes pounds of product sold in Hawaii to both Armed Forces and civilians (outshipments excluded) plus products shipped in for civilian use. Direct inshipments to the Armed Forces are excluded.

SAMPLING METHODS AND ESTIMATION

The Hawaii Agricultural Statistics Service uses a variety of sampling techniques to produce current agricultural statistics about crops, livestock, prices, farm labor, and other information relating to the agricultural economy.

Data is collected, summarized and estimates are prepared. These estimates then pass through the Agricultural Statistics Board of the U. S. Department of Agriculture where, for major items, Hawaii estimates become part of National totals and enter the official data base for agriculture. National and State estimates are published according to a schedule set one year in advance.

The Hawaii Agricultural Statistics Service conducts many of its surveys by virtually complete **ENUMERATION** of certain parts of the population. This is unusual compared to procedures in other states but is feasible in Hawaii due to the relatively small size of certain categories of the farm universe or the extreme concentration of ownership.

LIST SAMPLING is a common means of data collection. Lists of farm operators are well suited for the low cost collection of information by mail. Supplementary information is included within the frame that allows the use of efficient stratified sample designs. A major disadvantage of this method is the constant change in the list frame which can never be perfect. In Hawaii, cattle, hog, macadamia nut and coffee surveys are examples of stratified list sample designs.

AREA FRAME SAMPLING can be used alone or in conjunction with the list frame. The frame consists of an aggregation of identifiable units of land or segments which may be sampled. The frame is complete and does not suffer the type of deterioration over time as does a list frame.

MULTIPLE-FRAME SAMPLING is the use of two frames. It takes advantage of the best attributes of the area frame and the list frame, produces unbiased estimates and allows measurement of the sampling error.

OBJECTIVE YIELD SURVEYS provide information from direct counts, measurements and weights of the crop made from small plots in a probability selection of sample fields.

ADMINISTRATIVE DATA is used in addition to producer surveys to establish final production and marketings. These include processor receipts, slaughter, vacuum cooler volume, and inspections. Unloads at Honolulu and wholesale prices as reported by the Market Analysis and News Branch, are an important check data source.

REPORTS

Title and Description	Release date
CROPS	
AVOCADOS: Annual summary of acreage, yield, production, farm price, and value	May
BANANAS:	
- Monthly report on sales, farm price, and production forecast	Last week of the month
- Annual summary of acreage, yield, production, farm price, and value	May
COFFEE:	
- Preliminary season estimates of acreage, yield, production, farm price, and value	December
- Final season estimates of acreage, yield, production, farm price, and value	August
FRUITS:	
- Annual summary of fresh and processed fruit production, acreage, farm price, and value	September
- Annual summary of tropical specialty fruits - acreage, production, and value	August
GINGER ROOT: Annual summary of acreage, yield, production, farm price, and value. Planting intentions for next season	August
GUAVAS: Annual summary of acreage, yield, production, farm price, and value	June
HERBS: Annual summary of fresh production, farm price, and value	June
MACADAMIA NUTS:	
- Preliminary season estimates of acreage, yield, production, farm price, and value	January
- Final season estimates of acreage, yield, production, farm price, and value	July
PAPAYAS: Data on acreage, utilization, and farm price	Mid-month
PINEAPPLES: Annual summary of acreage, production, farm price, and value	February
SEED CROP: Annual summary of acreage, outshipments of seed, and value	October
SUGARCANE: Estimates of acreage and production for all major U.S. producing areas	August-November
TARO:	
- Quarterly summary of taro milled for poi	Jan., Apr., Jul., Oct.
- Annual estimates of acreage in crop, production, and farm prices for Chinese and wetland taro varieties	April
VEGETABLES:	
- Monthly summary of acreage, sales, and farm price for selected major vegetables and melons. Includes forecast of production and harvested acreage	Second week of month
- Annual summary of acreage, production, and value for all vegetables and melons	July
FLORICULTURE AND NURSERY PRODUCTS	
FLORICULTURE AND NURSERY PRODUCTS: Annual summary of area, production, and value	June
POINSETTIAS: Fall report of plant inventory and past year sales	October
LIVESTOCK	
LIVESTOCK REVIEW: Monthly hog and cattle slaughter, cattle outshipment, pasture conditions, number of milk cows and milk production, number of layers and egg production, and farm prices	Last week of month
CATTLE: Annual report of inventory and calf crop as of January 1	February
HOGS: Annual report of inventory and pig crop as of December 1	January
HONEY: Annual summary of colonies, production, yield, farm price, and value	February
OTHER PUBLICATIONS	
AQUACULTURE: Summary of operations, production, and value	September
CROP WEATHER: Weekly comments on weather and crop conditions. Rainfall data for selected stations	First working day of week
FARM LABOR: Quarterly report on number of workers by type and average wage rates	Feb., May, Aug., Nov.
STATISTICS OF HAWAII AGRICULTURE: A statistical summary of the State's agricultural sector	October

To order: Any of the above reports may be obtained by contacting the Hawaii Agricultural Statistics Service, P.O. Box 22159, Honolulu, HI 96823-2159, (808) 973-9588. Most of our publications are available on the Internet at: <http://www.nass.usda.gov/hi/rlsetoc.htm>.

Need More Information?

www.usda.gov/nass/

Where can I get more statistics or economic analysis?

National Agricultural Statistics Service (NASS) publications include weekly, monthly, quarterly and annual estimates of production, stocks, inventories, dispositions, utilization and prices of agricultural commodities and other items. The Census of Agriculture is published every five years covering all commodities by state, county and zip code. Other census reports include the Agricultural Atlas, Agricultural Economics & Land Ownership, Aquaculture, Census History, Congressional Tabulations, Farm & Ranch Irrigation, Horticulture Specialties and Outlying Areas.

Economic Research Service (ERS) Situation and Outlook Reports and periodicals analyze the current situation and forecast market conditions. ERS monographs offer economic analysis in the area of trade, production, rural development, farm inputs and other topics.

The World Agricultural Outlook Board (WAOB) issues regular forecasts of U.S. and world supply and demand prospects for major agricultural commodities.

How can I get National publications from NASS & ERS for all states?

→For Free E-mail Subscriptions send a message to usda-reports@usda.mannlib.cornell.edu and type **lists** in the message.

→For a Free Catalog of Products and Services call 1-800-999-6779.

The NASS and ERS catalogs list all products and services available from each agency. The NASS catalog includes a calendar of publication dates for agricultural statistics reports throughout the year.

How can I get State publications from NASS field offices?

→For Free E-mail Subscriptions send a message to listserv@newsbox.usda.gov and in the body of the message (not the subject), type **subscribe usda-hawaii-all-reports** - other states are also available by typing **lists** in the body.

→For Paper Subscriptions use the order form in this book. For other states, call 1-800-727-9540.
