RELEASED: June 20, 2011 3 P.M., CT
VOL. 32, NO. 17

Agricultural Summary

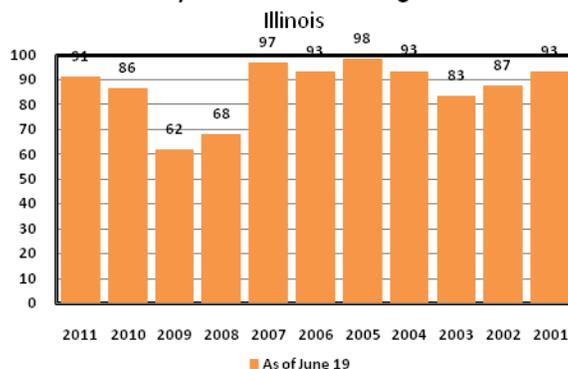

Below normal temperatures and above normal rain again combined to slow fieldwork progress. Average statewide precipitation was 2.64 inches, over 1.6 inches above the normal amount for this time of year. The average statewide temperature was 70.5 degrees, 2.3 less than normal. The average number of days suitable for fieldwork was 3.0. Rainfall was heaviest in the central and southern districts, where some producers were having difficulty finding an opportunity to finish spraying corn and soybeans and also to bale hay. Standing water in fields was a problem for those in low lying areas as well. Topsoil moisture ratings increased to 4 percent short, 49 percent adequate, and 47 percent surplus. Corn emerged progressed to 99 percent, still slightly ahead of the five-year average of 98 percent. Soybeans emerged advanced to 91 percent, also ahead of the five-year average of 81 percent. Winter wheat harvest was also slowed by the weather but managed to push along to 4 percent complete, behind the five-year average of 23 percent.

Crop Progress Percents

	This Week	Last Week	2010	5-Year Average
June 19				
CORN:				
Emerged	99	97	99	98
Height (inches)	24	14	40	30
