July 15, 2024

Winter Wheat Harvest Neared Completion

Winter wheat harvest progress remained ahead of schedule as it approached completion, according to Nathaniel Warenski, State Statistician, USDA NASS, Indiana Field Office. Topsoil moisture levels increased from the previous week, with 80 percent rated adequate or surplus.

The average temperature for the week was 75.3 degrees Fahrenheit, 0.1 degrees above normal for the State. The statewide average precipitation was 2.23 inches, 1.31 inches above normal. There were 4.1 days suitable for fieldwork for the week ending July 14.

Consistent rainfall and sporadic strong winds caused minor crop damage, downed branches, and ponding for some. Corn silking and soybean blooming progress continued well ahead of their respective five-year averages. Corn and soybean condition remained stable with both crops rated at 67 percent good to excellent condition. Winter wheat harvest neared completion. Other activities for the week included storm damage repairs and roadside mowing.
