USDA to Study Crop Production Practices

A sample of vegetable growers across Indiana will soon be contacted by the USDA, NASS, Great Lakes Region to participate in a set of surveys focusing on nutrient and fertilizer use, pesticide applications, and pest management practices.

Conducted annually in the fall, the Vegetable Chemical Use Survey (VCUS) is a study conducted every two years focusing on farm operators' use of chemicals on selected vegetable crops.

NASS will conduct interviews with approximately 100 vegetable growers in Indiana. They will be asked to provide information on their fertilizer, nutrient and pesticide applications, as well as their pest management and spray practices for pumpkins and watermelons.

“Participation in these surveys is vital to all agricultural industry stakeholders.” said Marlo D. Johnson, Director of the Great Lakes Regional Field Office. “Responses from vegetable growers to the VCUS will help ensure that nutrients and chemicals critical to vegetable production remain available on the market. While these surveys can be lengthy and complex, trained and experienced enumerators can work with respondents to make the process go smoothly and relatively quickly.”

The importance of these surveys cannot be understated, according to Johnson. “All sectors of the agriculture industry – producers, buyers, suppliers, policy makers, and others – rely on vegetable chemical use data to make sound business decisions,” she said. All of them rely on information generated through this survey. That’s why it’s so important that farmers take the time to participate and ensure that we have the most accurate and up-to-date information, straight from the source.”

Johnson assures survey participants that the confidentiality of their responses is protected by law. “NASS strictly safeguards the privacy of all respondents and publishes only aggregated state and national data, ensuring that no individual producer or operation can be identified,” she said.

For more information about VCUS and other surveys conducted by NASS, contact the Great Lakes Regional Office at 1-800-453-7501 or visit the NASS web site at: www.nass.usda.gov.
